I think that name is the player name.

There were several diferent versions several years ago, and they didn't run
on my ST. I had to compile the sources, and fix a few things. Even then it
was dangerous, it would corrupt a disk once in a while. (it had a bug that
overwrote memory which caused eventually a disk corruption)

You need to find a different version.

Best Regards,

Mustafa Soysal

Don't use control panel's own routines to set the date. Use for instance clock.cpx. BTW: I haven't tested myself yet but I've heard that XBOOT has problems with Y2000 too. According to the rumours as long as you don't create a new set you'll be safe. Furthermore you cant't use XBOOT to set the time.
>
>I vaguely remember someone mentioned a clock setter cpx for COPS, does
>anyone have a link to it ? or is there a later version of the Control

No there isn't a newer version of Zcontrol. I'll put clock.cpx on the Belgian ftp-server later on this evening. It will be on this location: ftp://chapelie.rma.ac.be/atari/utilities/cpx/clock_cpx.zip.

BTW: Cops can be used with N_AES but you have to use wdialog.

I heard that the above version of Nethack has a Y2K bug, although I do not
know whether this has anything to do with this problem. But maybe if you
do get past this hurdle it still will not run properly anyway owing to
said bug? I do not know the nature of this Y2K bug.

I'm not Karl Samyn but I think that England isn't exactly the place he is looking for (although for instance London is only some 250 km away from where Karl and I life). The price one has to pay to cross the channel is far to high and furthermore the British pound isn't exactly cheap nowadays.

Try Rodolphe Czuba of Centek in France (I would have thought
that would be the most obvious choice for Belgium). Very
skilled Falcon engineer, busy right now but should be able to
help. rczuba@home.com, or tel: +33 (0)687 465 200

Shiuming Lai

P.S. You don't have to personally accompany equipment for
repair abroad, unless you plan a short break away. Most likely
it can't be repaired on the spot anyway (System Solutions
operates a FIFO queue system, unless you pay extra for the
Pro Service to get immediate attention, and even this ultimately
depends on availability of parts).

From: Nurmix@socal.SPAM
Message-ID: <84jkdl11g1m@enews4.newsguy.com>
Source record: 67901

This is a new thread, based on some things that were said in another thread we've all read. My replies to that thread weren't all showing up, and I thought a new title might be appropriate anyway (one without Terry's name in it this time!)
8*)

On 23 Dec 1999 08:03:37 , Martin_Racine wrote:

>Terry, Paul, and the other PC migrators:
>
>Kellis _does_ have a point: this is an _ATARI_ newsgroup; avoid
>mentioning your non-Atari equipment or activities here.
>Everybody reading threads requesting info on Ethernet cards, cable-modem
>or exotic PPP authentications, no Javascript in CAB ... already are aware
>of the platform's limitations.

I don't agree that "everybody" here is aware of all the limitations inherent in the Atari platform at all. If that were true, we wouldn't have the same questions asked over and over again. And besides, if we don't discuss what the platform is lacking, and ways to improve the situation and keep the Atari/TOS platform alive and competitive, what would you have us talk about then?

And where else can an Atari user get opinions and information from other Atari users who either switched to and or also own a PC or MAC? Certainly not in a PC newsgroup, as 99% of the people there think of the 2600 when they hear the word Atari.

I'm an Atari user with _some_ PC/MAC experience. And due to the large number of dual system users here, I feel discussions about PCs, MACs and how they compare to the TOS platform are completely on topic and relevant.

I for one want to know how former/current Atari users utilize PCs and MACs, and how they feel they are better or worse than the Atari. You see this as a disservice to the users here. I see it as a benefit. But I do agree that if the posts stray too far away from Atari related things, or are merely mindless "my PC is better than your Atari" statements, they serve no purpose here in comp.sys.atari.st.

>Sorry if this post pisses you off. Some recent statements from
>both the MiNT (e.g. Kellis and the SpareMiNTs) and MagiC (Bengy
>and the Magic Mac) sides of the fence, as well migrators to other
>platforms (Terry, Paul, Nash & Young), make it seem like their
>current platform choice is this planet's only hope and end up
>making uninformed or blatantly blindfolded statements to boost

>their choice's validity by putting down other people's choices.

It doesn't piss me off at all. I understand where you are coming from. And by the way, I have not yet migrated to the PC, nor am I certain that I even will. And for the record, I don't recall making any "uninformed or blatantly blindfolded statements" about anything, PC or otherwise, or "putting down" anyone's choices - but perhaps you aren't referring directly to me in the above statement. ;*)

Today, I'm still 100% Atari, and always have been. My "MagiCally-Nemesized" Falcon is used daily for all of my computing tasks, and I'm quite pleased with it. And if I did make the switch to another platform, my Atari collection would stay with me too.

* And for what it's worth Kellis (if you're still _reading_)...

I started the "PC Choice" thread based on some things Terry said in an earlier post (Subject: Re: Atari TV Ad!) since a number of Atari users here also have PCs or MACs, I felt the post would be appropriate for this group. Inciting a riot certainly wasn't my intention, and personally, I don't see the need for all the hostility.

So people, what should be considered "off topic" with regard to mentioning PCs? Certainly "my PC/MAC is better than your Atari" posts offer nothing to the group. But honest comparisons of features, software, and capabilities are ok in my book. And I would think others would be interested too, given (as I said earlier) that a number of participants here use one or more platforms, in addition to an Atari.

What do you think?

Actually I meant John Rojewski. He doesn't respond to morons either;-).

I just don't know how I miss all this information?

Sometimes when following a NG, you read about a problem others are having
or a feature others are using.

But you may not be in a position to use the feature, or in another case,
perhaps not having the problem. So it is knowledge that is read and
forgotten. Other times, the jargon used, just confuses and until you get up
to speed you don't realize what someone means by certain words. The same
goes when reading a manual.

Eventually with enough plodding along, you find out these things.

Later Brian.

Well, I have no idea if they are progressive or not. Perhaps there is a
later DSP JPG overlay? The JPG OVERLAY doesn't show progressive JPGs
progress? It simply shows them upon completion correct? However, I switched
overlays and the pictures reappeared.

How can one determine if it is a "Progressive JPG".

Hi All,

Just to wish everyone on the group a very Happy New Millenium !

It's now 05.30 GMT and I've just retuened from London. If I hadn't gone with my family, there would only have been 2,999,996 people there :-))

What a crowd, and what a fireworks show. Looks like some of you others had some very impreesive shows as well.

All the best for 2000 !

Cheers

Paul

On 1 Jan 2000 01:14:29 G, Paul Nurminen wrote:

<SNIP> Old posts rehashed once again.

>What do you think?

1) I think that to follow long threads using NEWsie you must carriage return the Reference lines depending on your Editor.

Try it, tell me if it works. As soon as I did this the posts came back and I could see my replies. qED appears to be the editor of choice.

2) I think you should have included (Terry May) in the Subject line.

3) I think there was a fire not flames earlier.

4) I think everyone, literally everyone ended up posting to that thread. (And many didn't want to but eventually where drawn in)

5) I think the answer to "What do you think" the complete answer, can be found in the original thread. It is there. The opinions to your question will be no different the second time around. You must decide based on what you have read. If you were unable to read all the posts, pro and con alike, I would instead suggest you dig up the discussion again via DEJA NEWS. This thread didn't just cover change of platform, it covered discussion of different OS and comparison.

6) I think, that I am happy the first thread has turned to ashes. Hurt feelings, harsh opinions still smoulder, and no blowing on them is required.

7) I think, I would love to give you my opinion of your post with regard to other OS and such. But at this time, for the new year. I am keeping this opinion to myself, for another time and place. Today, Tommorrow or the next day, there is no immediate need to discuss these views. And I am certain I answered this the 1st time around more than once?

8) I think, that readers can see, the other thread has died. All was said that could be said. There is no need to start a discussion here with regard to the subject matter, no matter how informative it could be. It will do more harm than good.

9) I think, I will not make it to TEN:-).

Thats what I think.

I hope, no one replies to my post.

Later Brian.

26. Has Y2k killed my STe?

Newsgroup: comp.sys.atari.st
Date: 2000-01-01 00:00:00 UTC
From: Rick Chadwick <rickc@tig.com.au>
Message-ID: <386DCFED.D94A4FD2@tig.com.au>
Source record: 67909

I just got a call from my partner. We use an STe for music with Steinberg Cubase. Apparently it won't boot. It doesn't even seem to want to spin the floppy. In fact, our Roland S770 sampler is also misbehaving.
I then rang a friend who also uses an STe. He's what I'd class as an 'Atari Head'. He laughed when I told him, then while we spoke his laughter turned to incredulity as he tried to boot HIS STe. It wouldn't boot either, from several different disks.
What I don't understand is that neither of these computers (nor the 770) uses a date clock. My Atari has never known what day it is - so what difference can today make????
Now, both these guys are friends and this may be a comspiracy to make me look silly.
BUT, has anyone else had this happen?
I'm supposed to be working on a huge job with a teeny deadline tomorrow, and I'm not particularly interested in going out to buy a new PC, software and midi interface on Monday instead (my head hurts at the prospect)....
Thanks
Rick

If I used iso-8859-1, it would have come out the same way. This
is the RFC-documented way of quoting 8-bit characters in headers.

In my case, the E on Eric has an accute accent, which makes it a
character number 201, in other words, above the 32-127 range of
ASCII, so it has to be quoted with the character-set specified.

From: amscott <amscott@supanet.com>
Message-ID: <84kvoj$h0d$1@cumin.nnrp.netline.net.uk>
Source record: 67919

Greetings and a Happy New Year.
I've been out of touch with the Atari scene for a couple of years, but I am in the process of dusting off the Mega ST 2 (1989 vintage) for one of my kids who is going to college. Until my employer gave me a PC (hmm! I sometimes wonder if that was an asset) I was quite active with Fido and Zetnet for WWW. Things have obviously moved on and I am looking for an FAQ so that I can set up the ST with associated HP printer and maybe a piece of software to allow the ST disks to be read by a PC (Win 98).

For those of you who have heard that Win 98 <spit> is always crashing.....it's all TRUE!!

Regards

Alex

My 1040STe still boots this morning, and did at 2:00AM (after a frigid beach bonfire, but that's off-topic...).

My relatively minor Y2K bug is that the ICD clock reset itself to 1990. I can change it with the XCONTROL panel, and it will be OK until I need to reset. But it it is a pain in the butt to add this `bug fix' to my boot procedure. Now strangely enough, in the same room is a TT030 with TOS 3.05. It rolled over to 00 and the OS put new files at tthe end, so I know it doesn't think they're 1900. It skipped forward to January 6th though, and I had to reset it with the XCONTROL panel. After a re-boot it behaved, and complied with January 1st.

I still keep the 1040STe (TOS 1.62) as a MIDI station, running Notator SL (what was the last version: 3.21? anyway, I got it...) And use the TT for DTP things (like cassette inserts!).

I haven't tried to get into NOTATOR yet this morning, but now that I have heard these other reports I'm going to get off-line and try it out.

My question: is the ICD clock (as shipped with the AdSCSI Plus host adaptor board) NOT Y2K compliant, and is that why my 1040STe wants to reset back to 1990?

Oh, where is Hallvard these days? He knew these machines inside and out. Mario Becroft? Dan Dreibelbis? Ken Macdonald? gentelmen, your opinions if you please...

Hi,

well first of all: Happy New Year/Century/Millennium to you all!!!

My PC is on 24 hrs/day and didn't explode at 0000000.00000000 this
year. In fact, 2 mins after midnite I could contact my ISP without
problems.
I've set my TT clock to correct time, since it's turned off at times
and the system clock won't run further then (battery=done). Haven't
rebooted but I don't think it will have problems there.
BTW, no power failures, phone dead stuff, gas explosions, whatever
during the transit. Even the telly kept on broadcasting. So Y2K
doesn't exist? :-)))))))

For mail yes, but for news no! So the RFC purist would simply call you
=?ISO-8859-15?Q?Martin-=C9ric_Racine?= in person too. A bit complicated
to say but for a RFC purist anything is possible :-)

Maybe a good compromise would be to at least stay with the better
supported iso-8859-1 instead of -15. You hardly have use for the Euro
symbol in Atari newsgroups anyway? My reader Okami claims "passive"
support for -15 but your ï¿½ does not get converted to CHR$(144) (Atari
ASCII) in the header but shows up as the original CHR$(201)

Has anyone else had problems using Newswatch?

The newsserver at my provider does not interpret the two digit year in
the "NEWGROUPS" command correct. I get the 13229 latest groups on every
logon. Not fun to have to download 300kB everytime. Unfortunately I
can't find a way to disable this in Newswatch 2.50

Command as described by sending "HELP" to the server:
newgroups yymmdd hhmmss ["GMT"] [<distributions>]

The Newswatch log:

```
Connecting to news.tripnet.se
200 news.tripnet.se InterNetNews NNRP server INN 1.5.1deb 21-Aug-1997 ready (posting ok).
MODE READER
200 news.tripnet.se InterNetNews NNRP server INN 1.5.1deb 21-Aug-1997 ready (posting ok).
NEWGROUPS 000101 135456 GMT
231 New newsgroups follow.
de.alt.gruppenkasper 14961 14722 y
alt.fan.sophie-marceau 2485 2476 y
alt.personals.hiv-positive 4752 4737 y
alt.music.jenn-harmer 410 411 y
alt.movies.coen-brothers 2458 2458 y
alt.thebird 14525 14507 y
```

etc. etc.

Obviously the date 000101 is interpreted as something else.

Any comments?

I hadn't heard that, but you can ask the German distributors if they still exist: Trade iT, Arheilgerweg 6A, D-6101 Rossdorf/Darmstadt, Germany. I did the English translation for CGS, who never did much with it AFAIK. I was also in touch with the author - in fact he stayed with me a couple of days while I did the translation for a proposed Mac version, though I do't think this was published. Unfortunately I no longer recall his name or have his address :-({Just as well as I never got paid for the later work!}

>Anyway I was reading a review of it in ST Format and it suppose to have
>Scanning Support for the ColorBurst Falcon Hand Scanner. Does anyone

>New or Used version of CHAGALL for sale/trade, then do let me know.

If it is GDPS compatible then yes, it does support it. The handbook also mentions Scan32 and Scan256 scanners, which use IDC-to-GDPS converters.

Happpy New Year to all

>or similar - most modern progs will save their inf files in there, or
>inside a folder in that path which they will create themselves.

My magx.inf file has:

#_ENV HOME=C:\GEMSYS\HOME\

as the first entry and also:

#_ENV EDITOR=EVEREST3.6E\EVEREST.PRG

but Everest still can't find its .inf file from within CixRead, unless I put a copy in the root of the drive containing CixComm/CixRead. I also tried an entry like the last but with EVEREST=, but no better. If it's run from the desktop, then it uses the file in the EVEREST3.6E\ folder.

Also, I can't get Everest to come up with anything other than the system font in its font selector. ISTR I had this problem once before on my ST, but can't recall how I solved it :-(

Hello,
Because there don't seem to be anymore English Atari mags available at present,
here a resume of some (good) news published in the German STC magazine of December:

Milan and O.Piesche (programmer of Smurf) are making an official Open GL for the
Milan to make the port of software and Games easier.

Epic Marketing is adapting Foundation II to the Milan I and II. If the Milan II sells
well, other adaptions of games will follow like 3D-action games a la Quake and
Vipeout 2097

Axro, is looking for programmers who have written or are writing Atari software.
Would you like your software to be part of the software package which goes with the
Milan II ?

The Milan II will be shown at the Cebit 2000 in February. After that, commercials and
sale. The mag C't is interested in publishing tests of the Milan II

If enough Milan II are sold, there will be an adaption of the Milan hardware and OS to
the PPC standard (G3/4)

Adaption of the Milan Tos to the Phenix ?

The RFC applies to the name/subject lines of both mail and
news.

> Maybe a good compromise would be to at least stay with the
> better supported iso-8859-1 instead of -15.

What are we gonna do when people start posting in UTF-8, Ken?

I'm already receiving emails in UTF-8 that use the Euro or "oe"
but then again, anything non-ascii displays wrong in UTF-8.

The same problem happens on french websites that use that "oe"
in iso-8859-15, which CAB doesn't support yet.

> My reader Okami claims "passive" support for -15 but your ï¿œ
> does not get converted to CHR$(144) (Atari ASCII) in the

Then it appears it doesn't really support iso-8859-15, does it?

Probably not, unfortunately.

Now might be a good time for someone to buy the ICD sources
and patch/upgrade them to XHDI at the same time.

Hi Brian,
How vain of me to think you were referring to me! I'll get over it!
I agree on the 'manual reading' bit. In the Atari world, I really can't expect a programmer to give up his 'bread-n-butter' job (and I'm not inferring that you implied that) or neglect his family to compose a clearly written manual explaining all the in's and out's of his work. Off the topic a bit, my Roland 1080 manual was a doozy! Even a long distance call to California did'nt come up with a feature it had (not in the book nor known by the tech's!!!). And it does take a while to understand the jargon. But if a seemingly dumb question gets an answer that helps, it's not sop dumb (or moronish) after all!
John (G.)

51. Control Panel Dates and Y2k

Newsgroup: comp.sys.atari.st
Date: 2000-01-01 00:00:00 UTC
From: peter.slegg@====ANTI-SPAM====zetnet.co.uk
Message-ID: <386e4301$0$7553@znews.zetnet.co.uk>
Source record: 67934

Happy New Year Everyone,

I just had a shock when I checked the date and time in the Control Panel.
Although the date is displayed correctly at the top of the Control Panel
there is a problem when changing the date, it is not displayed and it can
be difficult to get the cursor to enter the date field.

The control panel I am using is titled Z-Control Beta and the ACC file
is 59,767 bytes. I have tried COPS in the past but it can crash with
N.AES and Mint and it doesn't have a built in clock setter.

I vaguely remember someone mentioned a clock setter cpx for COPS, does
anyone have a link to it ? or is there a later version of the Control
Panel that I could use ?

Regards,
Peter

:>> Is the TT networkable to a Macintosh G3? How is this accomplished? What
:>> protocal is used?
:> dont go there

: The TT is the best Atari to do network stuff with. The major problem will be
: to find an ethernet card. Since the G3 doesnï¿½t come with a serial interface
: you canï¿½t use the slow null modem connection. There are at least two
: possiblities, both cards use the VME interface (located behind serial 1 and
: 2): PAMs Net - drivers for this card are only available when using Mint as
: OS. The other card is the Riebl. Here you can use STinG under MagiC or
: PlainTOS with an appropriate driver. Protocol would be TCP/IP. FTP, telnet,
: e-mail and newsgroup clients as well as a browser(s) are available.

: Since the Riebl has BNC and AUI only, you will need a transceiver AUI to
: twisted pair (and a cross patch TP cable) to connect the two computers.

: Your major problem will be to find such a card. They are no longer
: manufactured and highly wanted (and comparably expensive).

Drool... Riebl card...

If a Riebl card is difficult to find, and transfer speeds aren't that
important, how about building the parallel Ethernet kit developed by
Vassili Papathanassiou? Description and STiNG drivers at
http://users.otenet.gr/~papval/ .

If you haven't seen it yourself, perhaps he is having fun with you.
Y2K will not prevent the floppy from spinning. Dirt, or a Bad Disk or a
defective floppy mechanism will. You disk can become corrupted by a virus
as a well.

>I then rang a friend who also uses an STe. He's what I'd class as an

You can bring up any subject you want. If it's even vaguely related to Atari it belongs in this forum. We will all eventually be using an alternative to Atari hardware, unless we die first. Those who don't want to read it can just skip the thread. If they want to waste their time bitching about it, that doesn't bother me either. I enjoy reading the comparisons between Atari and it's alternatives. As you said, where else are you going to find this sort of information?

I no longer care, any reasonable offer will be accepted I have been
trying to sell it for ages.

Forget about the 40mb scsi that's in it, it is like a german car (well
it is german :) I would buy one of these things without a disk in them
considering the quality of the thing :) It has built in host adaptor so
you can plug and play with your atari using any scsi disk.

68. Xcontrol

Newsgroup: comp.sys.atari.st
Date: 2000-01-02 00:00:00 UTC
From: starlord@net.com
Message-ID: <386f898f.0@news.qnet.com>
Source record: 67801

I'm using XControl on both my stock 1040ST and my Single TOS TT, on the ST when I boot up it's got a 87 date, as I don't have a clock of anykind, I figure that's how it'll go.

But the TT, I'm using XControl too, and I have an ICD host hooked up, when I bootup, I look at the date and it'll read like it did today... 1/02/28.

So I'm wondering, is there a way to fix this?

The web went away if you tried to access it from within the U on Dec 31st.
It may be back now. It is available from the outside - was available
yesterday.

The web pages also explain somewhere that you can access the archives thru a
file system called AFS. Apparently unix systems can hook into it.
Apparently the company holding the rights for this filesystem is not
interested in making PC or Mac clients.

If you could find someone with enough bandwith, and a high powered secure
unix machine willing to provide ftp access to the AFS file system, then you
could have the archive back on ftp. Note that there is no "secure unix" in
my opinion.

But maybe it is trying to create a file to store the players profile. I
think actually this wa sthe bug that I fixed when I recompiled it. The
filename it generated was not valid or something similar. You'd have to
make some changes to compile it with MWC, then fix the filename problem, and

then play it. But there are other bugs that destroy the file system of the machine. I lost files, directories, and entire hard disks until I quit playing it on the ST.

I turned on my old MegaST 4, but unfortunately can't boot to HD. I forgot which order they were hooked up to, and my ICD drive is frozen. It doesn't spin up. I think that was the boot disk, SCSI ID is 0, although you can set the ICD boot system to boot from any ID. SH205 is alive, but apparently is not setup to boot. And I am missing one of my SCSI drives that I used to operate outside of the case...Therefore, I could not possibly locate my sources or binaries for the version I compiled yet.

Hi,
Is there anybody who have a DMA to SCSI adapter with software for sale ? I need it for my "old but gold" Atari Mega ST4.
Thank you
Best wishes for a Merry Xmas and a Happy new Millennium.
a.pessina@libero.it

Hi Brian

>In the version of NEWsie I have, you don't even have to type the message,
>just think it, and off she goes. No lights, no fuss, no muss.

Theres a bit of a legal problem with that coz Bill Gates team pioneered
AutoComplete, and legaly Automail is tied in with that so all Newsie users
will have to pay a licence fee of $1000US, per message, and it will be
mandatory that you upgrade the TOS2000 to take full advantage.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

>Don't use control panel's own routines to set the date. Use for instance
>clock.cpx.

I just tried Zcontrol after someone mentioned probs with that, it froze my system, so that got x'd. I use COPS mostly and the clock CPX is OK.

>BTW: I haven't tested myself yet but I've heard that XBOOT has problems
>with Y2000 too. According to the rumours as long as you don't create a
>new set you'll be safe.

I tested that at 00:00:10, on 01:01:2000, i created a test set, but a show info shows the date is wrong, No crashing here. Xboot rolls from 99 to 100 in the date field, it seems that somewhere in the code the date field is simply added to a start value, time for a hacking session i think...

> As for the disks: The only problem I know about Atari disks are high
>density disks being formatted for 720 Kb.

No shit!

>Windows expects them to be 1.44 MB- formatted, and is unable to "learn".

Thats coz they are supposed to be 1.44Mb, the only learning needing to be done is by you.

>You can fix that nonsense by closing the right hand side hole (opposite
>side of the write protection switch), using black adhesive tape.

You can fix that nonsense by not attempting to format to 720K, its idiotic, your gambling with your data, HD's are HD's, and not reverse usable to DD's, they are different beast altogether, the only thing in common is the physical dimensions of the parent envelope!!..

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,rec.games.video.classic

The Cleveland Free-Net is gone, but the entire Atari archive has been
downloaded and re-indexed into a fast web based format. All the Atari SIG's
were archived. These include:

The Atari 8-bit SIG
The Atari ST/TT SIG
The Atari Portfolio SIG
The Atari Lynx SIG
The Atari Jaguar SIG
The Atari Library

The the original menus have been saved, as well as all the original
content, such as announcments, news, messages, etc. If you're looking for
Atari technical information, chances are its all there just waiting to be
searched.

The archive is at:

http://thefutureis.penguinpowered.com/

This is a non-profit venture, there are no banners or other annoying
junk to wade through. I hope you enjoy having the archive available.

Why answer to spammers and then quote what they're spamming? My news server didn't get the original article, so all you're doing is helping them propagate this stuff. Think about it <g>.

>>boot in MiNT on my next reboot, I have to boot twice. This because
>>magicsrc.prg and magxboot.prg are before the xboot.prg. This is done
>>as advised in the Magic Manual. But is this really necesary?
No it is not. Who ever wrote that manual goofed...
MagiC can and may be started after XBoot, it will not make any difference
at all. Try to put magxboot.prg as far up as possible.
With a Falcon you should be using magxbo32.prg instead of magxboot.prg

>>I tried to place the Xboot before everything, but then when I boot
>>MagiC it looks like (it is) xboot is loaded twice...
Yes, this is normal procedure. When Magic is initialised is resets the
computer, after a reset the AUTO folder is executed once more. Since
Xboot is there is will be executed. It doesn't doesn't do any harm, but
it annoying. But you have the advantage of being able to boot from TOS or
MiNT this way... from a cold start or total reset.
A possible solution is the one that Thomas Binder has given here, but it
has the disadvantage that when you perform a warm start under MagiC, you
can't activate/disactivate programs in the auto folder anymore.

Possibly the best solution is to use a patched XBoot, this will look for
MagiC and if it finds it present not start again. Performing a warm start
will execute all the progs in the Auto Folder including Xboot.

The patch and magxb32.prg should now be in your mailbox :-)

BTW: I have just noticed that the "set time and date" option in XBoot is
not YK2 compatible...

Cheers from Belgium
Dennis

Hi Ronald

>The reason no DVD-video is on Linux: you have to pay 5000 dollars for
>the license plus a non-disclosure agreement and the operating system
>has to be able to keep decoded data outside reach of users who want
>to copy digitally.
Linux Mandrake 6.1 has DVD-video drivers. DVD Films can be viewed in
800x600 24 bit resolution. Minimum 500Mhz processor required.
Download from http://home.germany.net/100/5083/
After recompiliation and installation type:
dvdplayer -vob -f/mnt/cdrom/video_ts/vs_01_0.vob
The sound is also great...

>Does anybody know if TOS/MinT/magic wil conform to the stringent
>prescriptions of the owners of the DVD-video methods?
TOS certainly not...
MagiC and MiNT might, it's early days yet. We've been amazed before,
remember Kodak and the PCD format?

Cheers from Belgium
Dennis

It is because NEWSie doesn't support properly (AFAIK) MIME encoding of
8-bit characters in a header of a message.
Also Okami doesn't support ISO-8859-15 when decoding MIME'd headers, so
I get quite another character instead of "E acute" (ď┼╛) in a field
"From:" from a moment when Martin-Eric started to use this character
set.

> For Atari Y2K info:
>
> http://www.whalley.demon.co.uk/atari/y2k.html

Ta for the plug, however all is not quite as rosy in the y2k garden as my page currently suggests. I thought things were pretty much straightened out until I tried the COPS clock CPX on my STE. Here are the results of some further experiments, make of them what you will (it's got me confused...). Any ideas/solutions welcome, and I'll attempt to summarise what information turns up on the web page.

From these further investigations, it appears the Hoepfl patch isn't a complete solution to the XBIOS problem: it doesn't seem to make any difference to observed the symptoms whether it's installed or not. However, it's doing *something* as if you run the test program which comes with it without the patch it rolls over 2028, but with the patch it rolls over to 2000 as it should.

My previous positive position was a result of relying on LEDpanel, Xcontrol and Papyrus as indicators of the date setting. Using the clock CPX has revealed the following:

If I have my Forget-me-clock set to 1980, I can use the clock patch program to convert the date to 2000. LEDpanel, Xcontrol and Papyrus all think it's now 2000, hence I thought all was well.

However, if you run the clock CPX, it shows the date as still 1980. This is with the Hoepfl patch installed.

Rebooting without any patches revealed that if you try to set a 2000 date using the CPX, the clock used by LEDpanel et al changes to 2000 but if you open the CPX again it is still showing the clock cartridge year.

Setting a year pre-2000 doesn't change the default year either, so the CPX is obviously only setting the one clock, but reading the other one. This may well be an effect of the XBIOS problem, which I am told can prevent setting the correct year.

Using the cartridge clock patch and the Hoepfl patch, everything looks OK on the surface, the test program shows *something* has been fixed, but there is still a clock somewhere in there which is set incorrectly. (The same CPX happily shows 2000 under MagiC-PC, though I haven't tried setting the time with it on that machine in case it interferes with Windows.)

I also did a simple file system test, saving a new file with the patches installed and date ostensibly 2000, and this has been dated correctly (with a 00 year).

System is STE with TOS 1.62, MagiC 5.11, Papyrus 5.15, LEDPanel 3.1, COPS 1.06, clock CPX is 1.41 (English). Forget-me-clock cartridge and accompanying setting/reading software (can't set 2000 dates, hence need for patch), clock patch as on my web page.

My PC's also functioning perfectly well so far (as is MagiC-PC *smirk*,
with the exception of the known y2k bug in the file search in Magxdesk -
fixed in v6 I believe), though I did chicken out and switch it off over
midnight. Booted OK, no apparent problems so far. Unlike my STE (see
other thread)... *ducks*

Happy new year to everyone!

Actually, I dowloaded this two years ago to, to run on my ST. I found it had
the same problem then. So I tried it with my Falcon. STill didn't work.
I am 100% positive that my problem isn't the Y2K Problem.

Thanks Brian.

The NVDI system extension (I guess starting from version 3.xx) will handle
your HP correctly. As for the disks: The only problem I know about
Atari disks are high density disks being formatted for 720 Kb.
Windows expects them to be 1.44 MB- formatted, and is unable to "learn".
You can fix that nonsense by closing the right hand side hole
(opposite side of the write protection switch), using black adhesive tape.
--> Windows will take it for a 2DD disk.
There should be no problem reading the files on the disk... as long
as the file format is known.

As for me, I don't know any trick but just have booted
my TT030 without problems. Next test: I checked whether PureC
recognizes updated files (Jan 02.) in a '99 C project.
It worked.

BTW: My control panel (standard; TOS 3.06) shows the
correct date.

So far...

Yes, it seems to work on my Hades. So far I've done only one test. It's a
pity one still needs Wensuites own TCP/IP stack. Luckely it will dial in
when I'm in my usual setup, MiNT-net. No need to reboot.

Source record: 67879
Cross-posted to: alt.comp.virus,comp.sys.atari.st,hacktic.virus

The "Ultimate Virus Killer 2000" is the industry standard virus killer for the Atari ST/TT/Falcon platform. The program has been around for well over a decade, and with the latest release (8.1) it's turned shareware.
There is now an official "UVK 2000" support site where you can download the program, find descriptions of all Atari TOS-platform computer viruses (and their symptoms) and more. It's located at http://uvk.atari.org.
This message is being sent to three newsgroups. If you think this constitutes spam, or if you think this message does not belong in your particular newsgroup, please contact me at cronos@atari.org and I will refrain from posting to the newgroup in the future.
Thanks for your time.

118. ST News International Christmas Coding Convention 2000 (Atari 16-bit scene reunion thang)

Are you a member of the former Atari 'scene'? Did you, perchance, visit the "ST News International Christmas Coding Convention", in Oss, Netherlands, December 1990?

Then you should not wait a second longer and surf over to http://stniccc2000.atari.org to discover that, in fact, a reunion of that very historical event is being organised for December 2000, a 10th anniversary reunion as it were! It is going to be the coolest event of the millenium, I can assure you!
In case you've already surfed over to that site in the past year or so, be advised to check it out again, as it's been overhauled utterly! It looks way cooler now, and contains a lot more information!

119. sting 1.2 Falcon lockup

As far as I know, Everest will only show up MONOSPACE fonts in the font selector. I have over 80 fonts installed on my system, yet in Everest, only Courier, and Monospace 821 will show up in addition to the system font.

I always stay with the system font anyway, in my case monaco.fnt from NVDI.

Everest only seems to want to list monospaced fonts.

It's worse than that (Jim) :-)

My system freezes up completely and has to be reset when I call ZControl's
time setting dialog.

I've gone back to COPS, using the time setting CPX which accompanies NVDI.
I'd dropped COPS a while back because for some reason it insisted on
activating one of the STinG CPXs at the end of the boot sequence. Now that
I'm using ASH's PPP socket it doesn't matter.

I can reply online to email; Newsie sends when I press Alt-q, even
though it has disconnected from host (but not from ISP);
but I only do this for the most important emails: the rest wait till
I have disconnected and In queue them up for my next connect to ISP.
I wouldn't do this for the NG, which may require much thought and
even second thoughts (to cancel).

Happy New Year,
Charles.

Hi Chris,

>With regard to unpacking JPEG's, if a program existed that could
>create a 24-bit Targa image from a JPEG, and use DSP if present
>(ie..one that runs on all Atari's), we would see the Falcon just
>cream all the Atari's except for the 060 beasties and (maybe) 040?
>This is because Targa images are normally uncompressed and the only
>processing needed to create one from a JPEG is to unpack the JPEG.
The above can be achieved using uncompressed 24-bit TIF's, which is
roughly the same in format as Targa. Programs like Vision, Digilab,
Photoline, Papillon, ImageCopy, ...etc can be used for this.

Using this format is ideal for non DSP Atari's also, the disadvantage
is that the files become quiet large. A 24-bit CD cover can easily be
12Mb large.

Cheers from Belgium
Dennis

Well, it looks like the atari.org server is down again.

The Quick FAQ can be found here in the meantime:

This is only true if they were formatted with TOS 1.04 or later. Early
machines with TOS 1.00 and 1.02 wrote 2 bytes differently at the start
of the root sector and the PC was unable to read these disks.

There is IBMBOOT.PRG available in the PD field, with an associated .DAT
file, that can write a fully-compatible PC root sector to such disks
without affecting their contents. I am not sure if it works with
extended format such as 10 sectors though.

As I said in my original message, I tried that too but it didn't help.
It's find when run from the desktop, but to find the INF file from
CixRead I have to save it to the root of J:\, which also contains
CixRead and CixComm programs. As Steve Sweet said, I could also have set
up an alias there from Thing...

And I have solved the font problem - I hadn't installed a font selector
from AUTO as I thought that Everest would use Thing's - but it doesn't!

Thanks Jerry, I knew that. But I've solved the problem - I hadn't
installed a font selector from AUTO, thinking that Everest would use
Thing's font selector - it doesn't! With UFSL or Calvino, all is OK.

Regards, /Peter/

>file itself)

I tried that after receiving the above, but after I filled in the registration dialog and tried to Save setup, I got a completely empty file selector preset to E: and having everest.inf in the edit field, but no files of any kind showing in the body of the selector and the file refused to save. Changing to other drives still showed no files at all in the file selector list! This also happened when trying to run Everest from an icon on Thing's desktop.

I therefore commented out that line in Magx.inf, deleted the Everest.inf file in the root of J:\ (which also contains the Cix files) and tried again. When editing replies from the 'Edit replies' button in CixComm, or typing 'edit' in CixRead, Everest comes up without the registration dialog and trying a 'Save setup' shows that it uses the .inf file in the E:\ Everest folder, as desired. But when I did a 'com' to reply to this message, up came Everest with the registration dialog again and trying to save it showed that it was preset to the root of J:\ once more! So I copied the .inf file back to the root of J:\, and all seems OK for now. But goodness knows why the difference between the two ways of calling the editor from CixRead!

I also note that when composing replies with 'com' from CixRead, Everest looks for the .krz abbreviations file in the root of J:\.

>>Also, I can't get Everest to come up with anything other than the system

>>but can't recall how I solved it :-(
>
>I always stay with the system font anyway, in my case monaco.fnt from NVDI.
>
>Everest only seems to want to list monospaced fonts.

Yes, I know. Turns out that Everest won't use Thing's font selector, even though I have the line
#_ENV FONTSELECT=THING
in Magx.inf. Perhaps there should be a backslash after this? In any case, installing Calvino or another font selector from the AUTO folder cured the problem.

>
>Both should be used actually.

Tried that too, but no luck - see my earlier message to Derryck about Everest's strange behaviour with these #_ENV statements!

I wonder whether it would be better to go back to my env.cpx - or don't that work with MagiC?

Another strange thing: After I modified my assign.sys to include 05p for the Falcon resolutions (so I now can use MyBlue10 as the default font once again) when booting I now get 'ung�ltiger Zeiger bei Mfree' (i.e. invalid pointer at Mfree) just before the Thing desktop comes up, but after that everything still seems to work. I didn't get that before modifying assign.sys. The new bit reads:

```
05p SCREEN.SYS ;Falcon generic
SYSTEM.FNT
s MYBLUE08.FNT
s MYBLUE09.FNT
s MYBLUE10.FNT
s MYBLUE20.FNT
MONISO10.FNT
```

If I comment it out, the message doesn't appear. Removing the comments brings it back, so it is definitely the culprit.

What's all that about, any idea anyone?

Regards, /Peter/

>info shows the date is wrong, No crashing here. Xboot rolls from 99 to 100
>in the date field, it seems that somewhere in the code the date field is
>simply added to a start value, time for a hacking session i think...

Yes, I tried it too. It shows the wrong date at the head of a newly created set, too, though this can be chnaged later with a text editor. Just don't try using the set date/time function of XBoot - that does something very peculiar: The cursor appears much further to the right than it ought to, and while it is possible to type in 00, it doesn't stick and comes up with something like 13 the next time you open it. Trying it again comes up with another number!

If you manage to find the problem and hack it, please let me know!

This is apparently due to the ICD clock. If the date is reset to
01/03/00 in the CPX with the ICDTIME module loaded to save it to the
battery backed clock on the host adapter, then the date will show 01/03/00
when re-booted. Saved files show the correct 01/03/00 date. Sorting
files by date on the GEM desktop the xx/xx/00 files as most recent.

There have been several articles in the newspaper today with a
title like "Y2K scam" and this looks like one.

Honestly, he should release it as GPL, it that's what it takes
for him to rest assured his name will remain attached to the
patch he wrote.

I was of the humble opinion that the Milan II's should apply the principle
of "If you build it, they will come". What I mean is, that the machine should
have a factory fitted DVD drive so that it will encourage the development
of DVD software.

However, I also thought that a CD-RW drive should be provided as an alternative as
they are cheap enough these days. In any case the absolute minimum should be
a CR-R drive, just for the peace of mind of backing up that huge hard disk.

What I would really like to see is support for a Firewire DV card (IEEE1394)
so that Digitial video could be uploaded onto the Milan II as well as providing
support for the new generation of Firewire equipped fast peripherals.

This would allow video from a digital camcorder to be edited on the Milan
before transfer back to the camcorders DV tape. FunMedia and TNT's Mountain
provide most of the editing features. I can't get FunMedia to behave on my
Milan I and Mountain does not fully support sound.

From what I have read the Firewire standard is similar in some ways to SCSI
and Adaptec all ready build a combined SCSI & Firewire card. It just needs
someone with the necessary know-how to write the interface and control software.

Please, please, please ;-)

Regards,

Peter

IIRC, you need to set the config options (using a text editor) before playing it. The default values use a temp directory that most likely does not exist on your hard drive.

The only one that is actually used by TOS is PATH, which is used by the AES
during rsrc_load() and related operations.

Newer versions of the AES, starting with MultiTOS, did implement other vars,
but for the most part their definition is left up to the individual programs.
You'll occasionally find classes of programs (like AVSERVER-aware apps) that
will rely on one var or another, but there are very few universal standards.

If anyone would like to try the Geneva demo, you can get it from
http://www.pair.com/gribnif . That should tell you if the particular programs
you want to use will work with it.

160. FS (US) TT, Falcon, STe update.

Newsgroup: comp.sys.atari.st
Date: 2000-01-03 00:00:00 UTC
From: darklord@kih.net
Message-ID: <84r1un$2ar$1@news3.icx.net>
Source record: 67772

Okay, here are the offers I've gotten so far:

TT-030 - Stock machine, 120 meg HD, TOS 3.06, Ajax chip
comes with machine, non-working <esc> key. 4 megs.

I've received NO offers on this machine. Folks, I'm
perfectly willing to let this solid TT go for $125-150!

STe - 4 megs, TOS 1.62, stock machine.

So far, 1 offer of $60.00

Falcon 030 - Desktopper recased, external keyboard, 14 megs
of Ram, 2 gig HD, 33mhz FPU, Nemesis accelerator,
TT-touch keys, Yamaha CDRW 4 x 4 x 16.

So far, the best offer I've gotten is $280.00. That is just
too low for this much Atari. I would be perfectly willing to
let it go for the $400.00 range. Just add up what it would
cost you to put a machine like this together!

E-mail me and let me know if you can beat/approach these offers.
After a couple of weeks, I'm probably going to let them to to the
best ones. Remember, prices do NOT include S&H. Thank you.

It is with a heavy heart that I'm announcing the shutdown
of the DarkForce! BBS, as of 12-31-99...

At this time, the number of callers, as dedicated and loyal
a bunch as any Atari sysop could hope for, just doesn't justify
the continued cost of operation. ;-(

Through online information, contact lists, and monthly prizes
including almost every Atari magazine ever published, as well
as complete Atari ST systems, add-ons (Falcon memory boards,
etc), and Atari software, as well as the inevitable file
collection, (at one time, I think one of the largest by any
Atari BBS - 3 CD's, and 4.5 gigs of HD space) we sought to
support Atari users the world over...

I wish to thank each and every Atari user who has supported us
over the last 5 years by calling.

Sysoping the DarkForce! BBS for the last 5 years has been one
of my greatest privelages as an Atari user. I wouldn't have
missed it for all the Windoze® machines in Silicon Valley! ;)

Once again, thank you all, the Atari community, the best in
the world!

```

I have a Navarone Cartridge Clock with the Original Disk software and
manual. I've used it in the past on a STE, but haven't lately.
Don't know if it's Y2K ok or not.
I do know that some of the extra programs on the disk aren't STE
compatible. Think one of them was some type of Alarm. But the main
cart software for the time/date is STE ok.

If he hasn't found it by now, let me know and I'll try to dig up the
disk.

: not appear to be affected.

I am afraid I cannot remember the details but I believe it was you who contacted me about this problem some months ago, and I then passed on this information to another local programmer who, in cooperation with you, started to write a patch program to fix the problem. However it was my understanding that you since discovered that a similar program was already available, and so work on the patch was stopped.

It would appear then that your advice was taken seriously and that, in any case, a patch is available and so there is no problem. If another patch was not available, I am sure the local programmer who was working on a patch would be happy to continue development of it.

Incidentally none of my Atari computers or programs seem to be affected by Y2K. (Except for an unimportant error in the way a couple of programs display the date, which can be fixed by linking with a newer C library.)

I'm just curious, do any of your ST machines display misbehavior
as reported by others here, such as the year resetting itself to
2028, even after it has been set with the CPX?

As I recall, the bug affected mainly ST whose XBIOS did not read
the date from the RTC chip (because they have no RTC) but instead
from the keyboard, but it might be dumber than that.

Btw, what TOS versions do your ST machines have?

I'm begining to think that, if your ST all have TOS 2.06, this
XBIOS bug might turn out to be related only to TOS 1.xx versions.

171. JetMail Y2K fix

Newsgroup: comp.sys.atari.st
Date: 2000-01-03 00:00:00 UTC
From: Joerg Spilker <js@jetsys.de>
Message-ID: <3871022B.E3E6686E@jetsys.de>
Source record: 67783

Hi,

i just released a new JetMail 1.01 version. This version fixes a problem with
the date field on internally generated messages. This field is generated by
using the strftime library function which is buggy. The %y operator expands to
10 instead of 00 in the year 2000. This is fixed now. This does not effect LED
1.60 which will generate wrong dates if you didn't correct the date in the
header after writing.

The new version was hatched to FAN.COMM.FIDO and JET_BETA. It's also available
by FileRequest from 2:2432/1101 with the Magic JETMAIL (source with JETSRC).
You can also download the fixes from http://www.jetsys.de/

Greetings, Joerg

Hello Fredrik,

Best Electronics Sells refurbished MegaSTE Keyboards for around $100.
And their backwards compatible with the Mega ST. And preferable over the
Keyboards that came with the Mega ST 2/4. If a Mega ST 2/4 Keyboard
breaks down, it takes a lot more work to repair it. MegaSTE Keyboards
usually take less work to fix. Brad at Best Electronics has replacement
Mylars that usually does the trick. E-Mail: BestElec@concentric.net or
call Brad in California, U.S.A. at (408)243-6950.

Hi
I want to use these fine programs CDreader and CDPlayer for writing audiofiles to my harddisk
with my 32Sp Pioneer CDROMdrive.Then I want to burn CD's with CDAUDIOPRO (Sound-pool) with my Yanaha CDR200t. But what I get, are empty tracks !!
Only the trackname is burned (76Bytes) but not the contents of the WAV or AIFF file.
What can I do ??CDCOPY is no option, cos this program won't cooperate with modern CDROMdrives . Only very slow drives will do the job perhaps.I tried my old singlespeed Toshiba
and even this CDdrive did fail with CDCOPY......Only my Yamaha CDR itself can copy data to my harddisk
with CDCOPY but my Yamaha is a bad reader.....(it's worn out or something, I don't know, but only
burning is really OK)
So is there anybody who knows how to use CDReader(Klaus Heyne) and CDPlayer (A.Clauss)?
Please help, I have so many destroyed CD's.....
Jos

Are you a Glaswegian?

Whats that to do with the price of sheep? :)

My Control Panel,prior to typing in the correct time and date each
time I start a session,has always shown the last 2 figures as 20,ie
00/00/20. When I type in the current date the last 2 zeros change to
20 now.

If you use a modern filesystem implementation (MagiC or FreeMiNT), you
should be able to do it by using the command line tool "touch".

One thought, you must use HSMODEM7 (not 6) with all the new Sting stuff.
I can't say if that's it but, like I said, just a thought!

Charles,
Different situation with E-mail. No need to connect/re-connect as long as
your still on-line with your ISP. With NG's however, the connection does'nt
last very long and then a re-connection, re-download of the list, then re-
download of the post to reply to (unless I'm seeing this the wrong way!).

Message-ID: <38708D66.FE2753A3@gerald-koerner.de>
Source record: 67837

Hi

I was searching about 1 year for an ST-Book. During this time I bought a Stacy, a TT, a Falcon, a Mega STE and some other things.
Now i have got a ST-Book. It looks great and it is very nice.

But the question is correct: What would i do with it?

There is only one answer: It is nice to have.

These days we can buy all the things, we wanted to have in the good old ATARI-days, because they are cheaper (but used).

Greetings

Gerald

183. Reason for Y2K problems

Newsgroup: comp.sys.atari.st
Date: 2000-01-03 00:00:00 UTC
From: george@moulder77.freeserve.co.uk
Message-ID: <84q4fq$919$1@newsg2.svr.pol.co.uk>
Source record: 67838

The REASON for the Atari Y2K problem is that there is some faulty code in the X-Bios operating system of all STs up to the STE making the Keyboard clock mal-function after 1999; Megas may not and Falcons do not appear to be affected.

I have tried to get people interested in this problem for two years, but most people say "I've tried a rollover test and my Atari works perfectly after 1999". What they don't seem to know and don't want to believe, even when it is explained to them, is that there are TWO clocks in each ST/STE; at 2000 one rolls over satisfactorily but the other one does not. This discrepancy then seems to interfere with the correct operation of subsequently-loaded applications, ie a program that appears to have problems after 1999 miraculously works OK when a suitable patch is installed. However, the writers of many of the date-setting programs apparently were aware of this problem long ago and wrote their programs their programs to work only up to 1999. These will NOT work, even with a patch installed.

Three Atari shows ago Joe Connor said he was going to publish my letter to Atari Computing setting out what I had found out about the CAUSE of this problem: he never did, but published letters setting out the EFFECT of it instead, and listed some of the many programs that were found not to work work.

Due to the lack of interest (I bet you are all interested now!) I eventually persuaded a PC friend to write an Auto-folder patch which enables the date to be set correctly on both clocks after the year 1999 (I had a job to convince him, too, that there were TWO clocks in an Atari!) and so far in tests using this patch I have only found one program that does not work, and have altered this myself to function for my own use only so that I do not contravene the author's copyright.

Not unreasonably my friend, who is not an Atari enthusiast, is trying to get some recompense for his 200-or-so hours of work on this patch program, and he is currently trying to sell it to the new Atari magazine that it is hoped will be published shortly. He is NOT prepared to get in contact with or supply it to a mass of individuals.

This should explain things to you even if it doesn't help. So far he has had no reply from the proposed backers of the new magazine, so perhaps one of you would like to act as an agent to collect small sums to buy this patch from him and releases it to everybody. There MAY be other patches available if you can find them, but it's no good asking me for a copy of my friend's program as it is not my property to distribute.

In passing, I find it quite depressing how quickly people post messages without reading postings that have gone before. This is the second time I have put information about the Y2K problem on this News Group, and I have little doubt that tomorrow someone will say " Hi, my clock says 2028, has anyone any ideas?" Write first, think afterwards, and do-any-work-oneself-on-working-out-what-the-problem-is last of all, seems to be the order of the day. But I mustn't get bitter.

A happy new year to you all!

George Moulder

185. Re: Changing FOLDER dates

Newsgroup: comp.sys.atari.st
Date: 2000-01-03 00:00:00 UTC
From: george@moulder77.freeserve.co.uk
Message-ID: <84q9s7jsa1@newsg1.svr.pol.co.uk>
Source record: 67840

On 3 Jan 2000 12:09:53 G, Julian Reschke replied about my query on a program to change folder dates:

>If you use a modern filesystem implementation (MagiC or FreeMiNT), you >should be able to do it by using the command line tool "touch".

Thank you, Julian, but I am still happily single-tasking with TOS 1.62

I had given up receiving a reply on this subject, and altered all the dates manually, using the simplified hexadecimal structure shown below. Surprisingly it didn't take long.

But thank you for taking the trouble to reply.

George Moulder

To alter folder date:-

In Monitor:
Second line of folder entry in Root Directory;
Fifth pair of eight hexadecimal characters.

Second Pair
---
3 0 (2004)
2 C (2002)
First Pair 2 8 (2000)
---------- 2 4 (1998)
(Jun) C 1 (1st of month) 2 0 (1996)
(May) A 1 (1 to F) 1 C (1994)
(Apl) 8 1 (hexa-decimal) 1 8 (1992)
(Mar) 6 1 (available) 1 4 (1990)
(Feb) 4 1 (for use;) 1 0 (1988)
(Jan) 2 1 (ie 1-15th) 0 C (1986)
0 8 (1984)
0 4 (1982)
0 2 (1980)

Limitations:
Drag-across copy gives folders in reverse alphabetic order.
New folders will be given current date and time on copying.

GM 31/12/99

Fortunately there are other patches for this problem that are more or
less free, e. g. the patch by Ingo Linkweiler, available in some German
mailboxes and probably also in the Internet.

Be sure you have run the ICDTIME.PRG program so it will save the
revised date from the control panel to the battery-backed clock on the ICD
host adapter. I've been through this on all my systems and it works fine.

The only problem I have encountered is that the FoReM ST BBS
program insists that the date is January 3, 19100!!!

And my ICD AdSCSI Plus board (the one with the built-in battery powered clock) which keeps my old 1040STe SCSI-compatible (floptical, Quantum 540) keeps wanting the year to be 90. I can backspace over it to 00 with the XCONTROL thing, and that will remain, but only until I launch an application, like NOTATOR SL. Then it's back to 90 again. Intersting: I can then change it back again with the control panel and any files saved from within that application show up in the proper order, as 00, after the 99 files. But quit the application and go back to the desktop and it's 90 again. Xcontrol again, reset it, ad nauseam.

Naughty of ICD to have left one of the niftiest ST third-party add-on units in a non-compliant mode. Baaaaad ICD!

Meanwhile, my TT and the old Mega ST4 upstairs, and the Mega STe in the other office, all rolled over to 00.

From: Starlord <starlord@qnet>
Message-ID: <3872e0a6.0@news.qnet.com>
Source record: 67647

I was able to get the date set for the ICD clock on the TT030. I unpluged the ICD host, booted up, set the time/date, THEN ran the icd time program, repluged in the icd host and rebooted. Now it shows the right time. So now the TT is offline and will be taken apart, cleaned, keyboard repaired and everything fixed up and then it'll come back online.

I will say this, I'm glad I've been a Atari GEM user for the last 10 years, otherwise, I'id have never figured out this windoz crud. But at lest it's something to use while I get my TT & Falcon back in working orders.

This is wierd behaviour. I'd suggest trying again but using magxdesk instead - I did find that Thing! had one or two anolomies that changing to jinnee overcame, but I cannot recall the details now.

Your cixread problem is possibly caused by the way that it calls Everest?

In any case you'll need to set your magx.inf environments for the cixcomm/read suite as per the one I copied to you at the club last year if you haven't already done so.

There should be no need to use anything other than magx.inf to set your environment path.

Hi Dan,

>Because there don't seem to be anymore English Atari mags available at
>present, here a resume of some (good) news published in the German STC
>magazine of December:
This is an excellent idea !!, but you focused on the Milan II news...
You've overlooked the Pontis news, which IMHO will interest a lot of
people here... talking about an unexpected present...

Falke Verlag has signed a deal with the portable MP3 player manufacturer
PONTIS. Falke Verlag will adapt the driver software, which will make it
possible to transfer MP3 music from Atari to the Player, and from the
player to Atari.

A light version of the program will be included on the Pontis Install CD.
On the packaging of the player will be a message that the player is "Atari
Compatible". :-)
The player will be released in Europe the 1st quarter of 2000. The driver
should also function with MP3 players from Grundig and Hexaglot..

Cheers from Belgium
Dennis

Yes, we all did... somehow Mr.Smith thinks we're all morons that needs to be reminded constantly at least once a week. He cares about us that much that he's now posting his spam twice a week, if we don't react to this, he'll flood us with it every single bloody day....
And no he doesn't want to participate in the newsgroups... according to him he has so much work to do he hasn't got time to answer the postings... this is a contradiction if you ask me.... he's pleading and begging here several times a week to please please buy his crap.... and he has so much to do ?
I know he follows this group. Nearly a year ago I made the same comments here about his constant spamming.... exactly 4 hours later I received a nice fat mail in my mailbox....IIRC he made some remarks about a politician and told me to get of his back... which I did, until now...:-)

I've been reading his drivel for months now, but now it's getting out of hand, some people get flamed here because they attach a 1Kb file to their posting, which they shouldn't do... what about Benjamin Smith sending us 24Kb postings containing... nothing at all really?
Every time that guy post a 24Kb big spam here I'm gonna email it back to him, twice... if everyone here who doesn't like Bravo's Sierra marketing tactics does the same thing, I bet it'll stop rather quickly.
With his enormous workload and accordingly giant client list, he shouldn't be spamming here in the first place, but mail his crappy offers straight to his customers mailbox...

And before a wiseguy tells me to use a filter... NO NO NO.. I simply refuse to use a filter on this newsgroup. Why the hell should I take measures about someone misbehaving ? He should have the decency to stop this nonsense, and like Brian said: once a month will do nicely...

Spamming provokes spamming :-)
What about this?

Brandnew shrinkwrapped games can be bought from Software Seidel in Germany..
Prices :
1 Game : 6DM = $3
5 Games :25DM = $12.5
10 Games :40DM = $20
20 Games :70DM = $35
Now prices like these are worth spamming about... this is why I say that the Sierra Bravo offers are crap. What's the difference between $200 and $35? Yep

right...:-)

Interested ? go and take a look at http://www.seidel-online.de
Shipment all over the world, credit cards accepted

Oh, I haven't mentioned the hardware part...
etc.... heck, check it out for yourself
Start drooling!!

It's a pity Internet wasn't popular yet in 1994, otherwise I suppose we would
have seen postings here from the Tramiels...."please buy our latest computers,
we need room and money to pay the milkman" <snif>

We now have .09 cents, anyone else?

Cheers from Belgium
Dennis

This is the part we've all come to know very well lately.....
>
>------ =_NextPart_000_01BF523D.3BD0D44E
>Content-Type: text/plain;
> name="message.txt"
>Content-Transfer-Encoding: quoted-printable
~~~~~~~~~~~~~~~~
This is fun :-), have you ever heard of a quoted-printable MIME format?
come to think of it.... is quoted printable allowed in newsgroups according
to the RFC standards? I think that's the reason behind it....

>Content-Disposition: attachment;
> filename="message.txt"

<SNAP>

As you can see from the quoted header, your posting has been converted to
a quoted-printable attachment.... and is called message.txt
Since I use a mailer that can handle quoted-printable there was no reason
to "convert" the posting in the first place. I'm puzzled why people here
are constantly mentioning the HTML attachment.... there isn't one, just a
straight text attachment...which every texteditor should be able to handle.
Now comes the question... who converted the news posting in quoted printable
instead of 8bit encoded?

That said, the fact remains that it's annoying.... any idea why it suddenly
just stopped?

Cheers from Belgium
Dennis

From: G T Martin <gtmartin@aladdin.clara.co.uk>
Message-ID: <EWmc4.37$UL1.552@nnrp4.clara.net>
Source record: 67697

Hi,

I would like to dump my ST1040 and replace it with a Mega STe, what sort of price should I be looking at for a second hand Mega STe, say with 2mb ram, and no extras?, in UK if possible.

I am also considering using my Web page space for creating a magazine for users of classic machines Atari, Amiga, Spectrum, Commadore etc. Would many people be interested in reading or contributing for a Web page Magazine?

Any opinions appreciated on both matters

Regards,
Greg

<snip>

Just a thought: I know it would be a lot of work, but if someone
burned the software from the UMICH and Belgian FTP sites onto CDs, we
wouldn't have to worry as much about losing it. They could then be
sold for price of material & shipping (around 5 US dollars). I could
take this task on myself, but I'm still shopping for a CDR drive.
Again, just a thought.

I would give you the $125 for that TT030, but I couldn't give it all
at once. If you would hold it, I could start payments on Feb.1st as
this months money has already been budgeted. I'm writing my messages
on my old 1040 and saving to floppy and importing to the editor on the
tt i've got.

|With my former USROBOT.Sportster 33k6 I could at least dial and even get online !
|But with my new modem Wensuite won't even dial !!!

May have nothing to do with it but when I got my new 56K modem, I just plugged the old telephone lead into it and nothing good happened - it did cause the telephone bells to make sounds etc but was unusable. The reason was that the new lead had wires connected to only two pins and the old one had connections to four. Replaced the old with the new and everything was OK.

I can't seem to get NeoControl to accept 00 as a year. but Xcontrol works OK. This is on a TOS 1.04 ST. The ICD host adapter clock seems OK with year 2000 on my ST.

MenuInfo locks up with the year display set for 2 digits but works OK if set to 4 digits. I tried it on an ST and a TT and it doesn't like a 2 digit date of 00.

213. FS/T: Atari ST games [01/04/2000]

$ 4.00 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3.20 for the first game and $1.10 for each additional game. Shipping for hardware and accessories depends on weight/distance. Large orders will be weighed as a package, to reduce shipping costs. Foreign orders welcome.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

Well fortunately or unfortunately, which ever way you want to look
at it, I was interested in getting a high end Atari... especially the
060 Milan, but October became Novemer, and December became April 2000
before the states would see the Milan II.

Now the fun I used to have with the people that introcuced me to
the ST is gone, and I'm happy with using my STE as an Atari 8bit add on
device. :)

Probably just as well Milan dragged their feet over here. I would
be stuck with a costly Atari computer that couldn't even use a RF
cable. ;)

Unfortunately this doesn't seem to be a total cure (see my post in the
"Has Y2K killed my STE" thread). With it installed on an STE, Daniel
Hoepfl's own clock.cpx seems to only set one of the clocks.

Say you have the year set at 1980 after booting and run the clock.cpx,
change the year from 1980 to 2000. If you run the clock.cpx a second
time it still shows 1980, though Papyrus, LEDpanel, Xcontrol and
whatever it is that dates files on discs now read the year as 2000. With
the patch installed, the test program which comes with it (which tests
rolling over from 1999 as far as I can tell) shows the rollover as being
correct. Without it it rolls over from 1999 to 2028, so the patch is
doing *something*, but not the whole job.

Is there another patch available? Uwe referred to a patch written by
Ingo Linkweiler rather than the one written by Daniel Hoepfl.

That was Dave Small's project before the company he was working for
ran into various problems. A Macintosh emulator that is quite limited,
but some Atari ST user who is into emulators might find it fascinating.

Dave went on to make his own home business with a program that rose
from the ashes of Magic Sac, being Spectre. Spectre 128K and Spectre
GCR used the 128K roms. Magic Sac, the VERY early 64K roms.

Spectre is quite good and opens any Atari up to all the Macintosh
software that ran on any system up to System 6.8. Try as I might, I
never could get System 7 to work on it. Rumors are that System 8 has
been run on it. I have yet to have anyone fess up to them doing this
however.

Anyway, loved the Spectre and Dave Small as a programmer. Spectre
BTW runs at true Macintosh speed on TT computers and ST's running at 16
mhz. A little sluggish on anything slower.
And they don't work on Falcons at all. :(

Take care,

Doctor Clu

Before AUNT decided they wanted to be a social club, we had
Systems for Tomorrow passing through for our yearly Atari show. You can
read in the second to the last issue of Atari Computing where I mention
running into Kent Kordes at a AUNT meeting.

Kent wanted to pass through our area again this year, and was
happy to do it for five to ten people (since he was planning on visiting
a friend in the Dallas area anyway) but the club president decided this
was a bad idea and stopped it a few weeks before it happened.

Plain and simple, Kent Kordes is a very friendly and professional
guy. And from one of the chat sessions we had with him, he was also
quite funny in his own warped way. :)

Take care you die hard ST users...

From what I heard from David Acklam while I was in AUNT, who
couldn't stop saying good things about Dave Small, it seems that
Mr.Small was dealt a very unfair hand in the end.

He had produced 68030 upgrade boards for the Atari ST line of
computers. Worked pretty good, but unfortunately the company that
supplied some of the parts for it sold him (believed to be purposely)
some defective parts. This really hurt Mr.Small's business. So Dave
Small took the company to court, and lost. :(

Dave Small decided to wrap up his business in the Atari ST realm
since that pretty well did him in at that point. There really hasn't
been too much heard from him since.

Hi Dennis,
I believe you stated you had version 1.2. If you'd like to try 1.31
(curtasy John Logan) let me know by E-mail. Also (and I have no idea of it
working), I have Calltime3 to call the Naval observatory wich downloads the
Naval clock time and resets (in my case) the ST4 and Falcon clocks.

223. Re: 8bit emulator for ST

Newsgroup: comp.sys.atari.st
Date: 2000-01-04 00:00:00 UTC
From: Greg Goodwin <lady-aramis@geocities.com>
Message-ID: <387242A7.6F5E@geocities.com>
Source record: 67716

Alright, I am happy to say I am a ACTIVE ST X-FORMER user.

There was a time where I was set on getting high end Ataris and
emulating a 8-bit, but after recent events, I would sooner see my ST
become a slave to my 8-bit instead. (evil grin)

Simply put, on the ST there is one choice, and that is ST X-Former
which only runs well on computer with only 8 mhz processors. The great
thing about the X-Former was the special cable that came out of the
parallel port and with crude timing (as Darek once told me) was able to
talk to an 8-bit drive quite well.
But if you don't have a 1050 8-bit drive, don't worry, for the
program runs programs in the .XFD format quite well as a virtual floppy
disk drives. ATR and other formats can be converted to the XFD format
and used on ST X-Former.

As it happens, the X-Former is great for basic programs, text
adventures, and a great way for file transferring. Sadly, player
missile graphics were not incorportated into the emultor, so you have a
emulator that doesn't have the pokey or antic emulation...
... so you might as well have a C-64, minus the great software
selection. :)

Works so well that I currently port disk images over on floppoes for
use with my 8-bit system using ST X-Former. I will continue doing this
until I get the APE interface cable.

With faster Atari computers you have EmuXL and Atari800. EmuXL is
said to run at pretty good speeds on stock TT computers. Atari800
requires a much faster Atari computer (Afterburner Falcon, Hades, etc)
To the best of my knowledge, none of these offer a cable system to use
actual 8-bit floppies like the ST X-FORMER can.

Take care,

Doctor Clu

Hmmm... honestly, the first is a good goal, the second is vague with
no target, the third is noble, the fourth is easily attainable, and the
fifth I think you can do for at least 2000. For the millenium....

So honestly, is that all you are going to do with the next 1000
years? Were these Millenium resolutions (1000 years) or just for 2000
(1 year). If true millenium resolutions... that's pathetic. :)

226. Re: Reason foor Y2K problems

Newsgroup: comp.sys.atari.st
Date: 2000-01-04 00:00:00 UTC
From: zctek@aol.com
Message-ID: <20000104161544.16248.00000414@ng-fo1.aol.com>
Source record: 67719

Here is a defintion of the problem. Hope it is of interest.

Atari ST Time-of-Day Clock Problems

Definition of the Problems
1. There are two Time-of-day Clocks in the Atari which are not maintained
in
sync by the hardware or operating system.
2. One of the Time-of-day Clocks fails to operate for dates after 31 Dec
1999.

Scope of the Problems

The problems exists on Atari ST machines with TOS levels from 1.0 to 1.62.

Background to Atatri ST Time-of-Day Clock Problems

When the Atari ST was released in the mid 1980's there were at least three
design errors associated with the Time-of-Day Clock. These were:

1. Two Time-of-Day Clocks

Two related but different Time-of-Day(TOD) Clocks mechanisms were included.
This
does not make any sense given the associated functions that were provided in
the
DOS and XBIOS sections of TOS. The TOS Version 1 code associated with XBIOS can
be examined at the addresses shown in the TOS Addresses table below.

The two TOD Clocks can be independently set to any date/time, and in
consequence, Get Date/Time frequently gives unexpected results if the clocks
are
not in sync.

Since the choice of TOD Clock Function rests with the application programmer,
there is likely to be many date incompatible programs. There are various
Clock-Sync programs that may help to get the clocks in sync up until 31Dec1999.
After that a software fix is needed for the XBIOS Clock functions.

2. XBIOS SetTime/Date Function

The XBIOS SetTime/Date function, which accesses the IKBD hardware via the IKBD
serial Binary Coded Decimal (BCD) interface, for some strange reason, has #$80
added to the BCD Year value before transmitting it to the IKBD.

Programmers have already gone to the trouble of subtracting 1980 from any date
inputted by the user so that the year 1980 from the user will be passed to
XBIOS

(or DOS) as 0.

The consequence of this is that year values greater than BCD 19 will be invalid after adding #$80. e.g. BCD_19 + #$80 = BCD_99 which is valid but BCD_20 + #$80 = BCD_A0 which is invalid. The IKBD ignores invalid BCD values so the year is not updated in the IKBD although the time is updated.

3. XBIOS GetTime/Date Function

The XBIOS GetTime/Date function, which also accesses the IKBD hardware via the IKBD serial Binary Coded Decimal (BCD) interface, compensates for 2. above by subtracting decimal 80 from the Year AFTER it has been converted from BCD.

This means that the Get Year is not the same as the Set Year for input dates above 2060. The Set years 2060 to 2107 map to Get years 2028 to 2075.

This may sound a bit academic, but it does affect some of the possible software fix methods.

This also accounts for frequently getting the year 2028. When the date in the IKBD rolls over to an invalid number and the IKBD passes back BCD_00. Since BCD_00 from the IKBD Clock becomes BCD_00 - decimal 80 = #$B0, then the top 7-bits are then right-shifted to give #$30 (48 decimal) which is passed back to the
application. Add 1980 in the application and you get 2028. Magic, but a pain.

Sue ASH for not supporting all Atari keyboard layouts and
hardcoding the key layout in some of their applications.

This is pretty much true -- Dave used to lament his inability to
convince a jury of the technical issues. Add a divorce, a badly
injured child (broken leg? -- too long ago, can't remember) and an
ongoing difficulty with keeping employees and the business just fell.
He made a brief reappearance a few years ago to say he was doing O.K.,
but I haven't heard from him in five or six years.

I am surprised that the hardware decoders are not more robust. I have used Videodisc (essentially a giant CD) to play educational videoclips for years using a MacSE (8 Mhz 68000, I believe). The Mac functions solely as a hardwired remote control, leaving all videodisc decoding to the player. Although this may seem akin to just having a standalone Videodisc player, the "Mac as remote" concept allows for a huge amount of control over the player. I often "bookmark" individual frames or segments to replay for the students, for example. Since there are standalone DVD players, surely someone could create a serial (or more likely USB) interface for the computer. I thought that was was a hardware decoding card was.

> >Is the DSP cookie in the cookie jar?
> I have no idea what you are talking about.
> I have no idea, what kind of cookie a DSP cookie is.
The "Cookie Jar" is a place for programs to leave information for other programs to find. For example, I have a cookie called GNVA, which alerts other programs (primarily NeoDesk, I suspect) that it is running. I also have a cookie that informs the system that I am using the English language (some programs check this cookie and choose the correct .RSC file automatically!). As you may suspect, only a little information can be put in a cookie, but they are quite popular (I seem to have around 20 right now).

JAR##.PRG, by Gribnif is the manner in which I created my cookie jar (there are other ways). A .CPX allows me to look at my cookie jar, but 99.99% of the time, there is no particular reason to want to do so.

I once read the fitting instructions and seem to recall a step that was
mandatory for RGB but optional for VGA users. I suggest checking with
the installer of your Nemesis since it sounds as that step was not done.

Hello,

Printer drivers on the Atari are not included with the printer, as you may suspect. I know of two, SpeedoGDOS and NVDI. If all you wish to do is print, either will work, and until the mid 1990's it was largely a matter of how much power you wanted (NVDI is both more powerful and more costly). SpeedoGDOS has gone a very long time without an update, though, so I would suggest you spring for NVDI, which will also accelerate your computer significantly.

By the way, an HP printer will print an ASCII textdump, so if all you wish to do is print typewriter style text, no driver is needed.

Another couple of notes, before I forget....

Buy some PC formatted 720K disks. Any office supply store stocks them (your grocery store won't). These work fine, without modification on both my Pentium II notebook and my ST. Just remember to write your files as XXXXXXXX.XXX, where X is a capital letter, a numeral, or an underscore "_" character. A big cause of errors is trying to use spaces: "MY FILE.DOC" won't work, "MY_FILE.DOC" will, "My_File.doc" might.

For what it's worth, I lock up my notebook at least once a week. My Falcon is much more reliable.

Can you change a folder date with TOS 1.xx?

No.

This has been corrected in a variety of ways (NeoDesk, by Dan Wilga/Gribnif works well), but basic, garden green TOS 1 cannot alter a folder date. This was corrected in TOS 2.

^ :-/ That's nonsense,
Allow me to translate. The controller can address 8 IDs (0-7). One is probably your boot drive, and another is often the computer itself (or the computer's clock). This allows for up to 6 additional items. Cabling becomes a problem, however. Although the SCSI interface is good for 5 meters in theory, high quality short cables are a must. I have a 1Gb HD that gave many errors when it was the 4th item in the chain yet runs reliably as the 1st item. This is not supposed to happen! Yet it does.

Not really. In fact, you can have an ACSI->SCSI adapter (like the
Link) and have two completely independent SCSI buses! I'm not sure why
you'd want to do that, but you could.

Dave is still around. About 1 year ago he posted some messages on Ataricentral.com to a guy looking for a Moniterm monitor for his TT. Dave offer the guy a truck load of Atari stuff if he came and got it. If I remember correctly the guy who also lived in Colorado never answered Dave. Dave posted another message trying to give away his Atari stuff again nobody answered well except me. I chatted with Dave for a few months and he was going to send me a Falcon(very early model), TT, and a MSTe. A few more months went by and a couple of very large packages arrived on my door step. It was 19" TT monitor , a TT, and MSTe both with keyboards. When I chatted with him was having problems with his foot(if I remember correctly) and I was trying to get him to give me a bill for the shipping which he never did let me do. Ive seen him acouple more times online but thats about it. He was also going to give away some magic sac carts and some ethernet adapters but never heard anymore about those. Dave is a very kind and give individual and I will surely miss his presence in the Atari community.

And to those who want to know yes I still have the equipment he sent and no it will never be for sale. I asked him to sign his name to it but, I guess he didnt have the time.

My STacy could handle a color monitor. It would turn off the LCD when
that occurred.

2 disks came with my Falcon. Email me at K@NOPE.NO.UIA.NYET.NET (kill
the 1st, 2nd, and 4th part of the domain name) and I'll send them.
Also, Mint has no need for MultiTOS.

Check out ATY Computers in Oakland, CA. I gave mine to Alex after it needed a new $175 power supply. Alex replaced the supply and put it up for sale. Don't know how much, though.

In 200 hours I can write a complete program for which I need a Pentium IV to
run it on. :-)
I can spend 400 hours on another program which will do practically nothing and
will be extremely expensive nevertheless.

From: jovlie@worldonline.nl
Message-ID: <84rfnlghm1@news.worldonline.nl>
Source record: 67788

Hi

Big problem I got with my new Twister V90-56K external modem and Wensuite 3.30c
With my former USROBOT.Sportster 33k6 I could at least dial and even get online !
But with my new modem Wensuite won't even dial !!!
Does anybody know the reason ?
Pascal , the OXO head, is very helpful, but doesn't know the answer either.
The only difference between these modems, except speed and V90, is the 9 pins serial bus on the Twister, on the USRobotics was the (25 ??)pins bus.......
But Sting, IConnect , Rufus, all these programs work perfectly with my Twister.....
so what have we here ??? In the PPPlink display I see :Initialisation du modem, then
Appel de : 123456778 (tel.nr.) and then nothing happens, sometimes I see Carrier : 1,5 million
bps, sometimes - 1,5 million bps ....
Please help me if you can.........
Jos Vlietstra (jovlie@worldonline.nl)

Not games, I have a few applications of my own that run on the ST in a
business environment. They are customized to a particular business
environment and being used in Europe. Now we are in the process of moving
everything to the PC platform, but meanwhile it would be good if they can
use their ST programs (like spreadsheets, databases etc) on a laptop. The
emulators come in very handy for that purpose - if they work with my
programs and other programs they use.

>
> Later Brian.

Yes, thanks for all your help. One thing I felt quite uneasy though was the URL "fatal design". What a concept for a successful business :) Maybe I am superstitious, I avoided browsing those sites...

(reminds me that I once forwarded a modem upgrade instruction for upgrading your 9600 baud modem into something faster, and I didn't pay attention to the authors name - deathstar or something like that). I was very sorry when I noticed it, and had to e-mail the same distribution *not to use it*. I guess it sits deep.

Meanwhile I offered the archive maintainers some help with the Atari archives. We'll see what happens. I don't know what I can do wit uploads though, I have no way of testing them against viruses or trojans.

Best Regards,

Mustafa Soysal

Hi John,
Don't know what the latest XCONTROL is but I'll take a 1.31 if you have
time to E-mail it! I mentioned 1.2 (my latest) since I'm not having a date
problem (but that may be due to having a Falcon (?) since I see now he's got
a 1.2.

>
> Never played this game before, so I don't know if there is some special name to type in at the start.
>
> All help appreciated.
>
> Brian.

If you mean Warwick Allison's _excellent_ GEM'd version then the first thing is that it's best on a Falcon or TT. It /will/ run on an ST, but unless you've got a graphics card, you won't get the best from it (unless you lose the graphics and run it as a text-based game).

Anyway, the first screen is just asking for a character name - usually your own name, but whatever you want to be called in the game.

Try examining the nethack.cnf file to ensure that the drives being referenced do exist and are not write protected. It may be that you have the .cnf for a floppy or ramdisk based version, and need to point it to your hard drive. Otherwise, I can't help I'm afraid.

As for the Y2K bug - I understand there is one, but I don't know the nature of it.

If you get the game running, persevere with it. It's a _very_ deep game (in all senses) and can easily keep you occupied for many. many hours. Check out www.nethack.de for FAQs, spoilers and hints.

Cheers,

Xav

After some serious thought, with apologies to those who answered this Post and considered my offer. I've decided not to sell the software. I'm under a lot of pressure to pay delinquent bills, I'm coming off the back side of the Y2K hype, I've been trying to get the attention of my customers so I can pay off my Bills inspite of the fact that Most people don't buy Atari for or around Christmas and because I skipped a few doses of my medication, I've been working Non-Stop for 36 Hours without sleep. That's something I can do as a Manic Depressive. Boy am I glad my Doctor doesn't read this NewsGroup. Anyway, I've just taken my Medication and in a few hours, I'll be asleep. Catching up on lost sleep. If you wanted to buy my Software, I'm sorry but the answers no. I'm going to ride this out and wait for my Atari Customers to bail me out so I can pay my bills. I wholeheartedly apologize.

==Sorry==

> I have an Atari 1040e. Dont know much about it I really only use it
> with 'Notator' for writing music. BUT its getting old!
>I need at least a hard drive for it.

You can pick up second hand hard drives and interfaces in the
papers...remember your never to old with an Atari...

>Is there a PC emulator? If so how does it work? I

I think there was a card that soldered on to the motherboard, or a least an
expansion that gave PC emulation, but probably only 8086/8 based PC's, if
you want a PC to todays standard your gonna have to buy one, or pick up some
of the new MilanII machines, which are based on the Atari. Maybe someone
else can fill you in on these.

> (eg I only have web access at work)

You can get Access to the web with your Atari! Though I am not sure about
e-mail, I'll have to post that one.

>but Ive been writing music on it,
> some used for radio broadcast for about 9 years

Well, it was one of the best machines for music, and in many ways still is,
clones are available with more more power. If you do feel that you need to
change, the best path to take would be to get Cubase for the Atari, its
always being sold off cheap in the papers. Port your stuff over (I assume
its MIDI), then once you have the hang of it, you can move to a PC or MAC
and kick straight into Cubase on that.....but DONT stop using your
Atari......at least get an emulator <s>.

>and I don't want to a) loose it all and
> b) have to learn a new programme
>

> PS anyone in England still supporting Atari? That would be nice! Ta. Al

System Solutions are sort of, though I have e-mail a couple of times for a
quote, but with no reponse. So maybe they have lost interest. Apart from
that, you will have to reply mostly on the excellence of newsgroups like
this, and the many great Atari web pages out there. I too have only just
entered the Atari scene, I was actually a Sinclair person, but could never
afford an Atari, but I am making up for it <s>.

>Actually, I dowloaded this two years ago to, to run on my ST. I found it had
>the same problem then. So I tried it with my Falcon. STill didn't work.
>I am 100% positive that my problem isn't the Y2K Problem.
Oh boy, this brought back memories :-)
I just run it again... no problems. I loaded some saved games and everthing
works as it's supposed to.
I have version 3.1.1 here (Falcon & TT compilation), its 1.1MB large and runs
with graphic cards aswell. Nethack is just great in 1024*768 !!
Nethack isn't time & date critical, so I fail to see how the YK2 bug could
influence it in any way...

The game itself is very picky concerning finding the correct files in the
correct folders...
NETHACK.311
.. DATA
.. LEVELS <===
.. SAVE <===
NETHACK.CNF
NETHACK.PRG
Make sure that in the folder DATA there are two folders called subsequently
LEVELS and SAVE.

Cheers from Belgium
Dennis

Basically it is a Sequencer program with Audio, which means you can do MIDI and record your voice or guitar along with it and save it altogether. Unfortunatly it is NOT an EXPERT system, meaning you still have to know how to play keybrds, or something to get the most out of it. HOWEVER, having said that...you can use ANY sequencer (even the free ones available for Atari) and bring in Midi Files from the net, and Minipulate them to sound completly different, like doing a Re-Mix. I have had fun taking a traditional Bach Piece, adding percussion, changing the sounds, like adding a "funk bass" instead of a cello. Using the tools available in a sequencer you can point and click and come up with some great stuff.

From what the Atari Compendium tells, the culprit is GEMDOS 0.13, which did not update the BIOS time. This means that neither the RTC chip, nor the IKBD clocks were updated.

GEMDOS 0.13 is typically found on TOS 1.0 and 1.02 ST machines, so newer machines should not be affected, as far as I can tell.

This was taken from the description of the Tsetdate() function.

This might explain why Mario does not experience any problems, as he is presumably using TOS 2.06 on his IDE-equipped ST hardware.

OT but:

Do you (or somebody else) know how to make Netscape 4 recognize this? It
appears as raw characters here.

Anyone knows of a good news+mail reader under Linux (that is free,
lighter than Netscape (easy one), that can call an external brwoser as
smoothly as possible when required, and if possible under X !) ?

Thanks by advance,
G.

Harlekin Accessory

My real interest in computing is trying out programs and seeing whether they fill a need for me.

The most amazing progam I have come across in six years of owning an STE is Harlekin 2, which makes a single-tasking TOS virtually into a multitasking one by the way Harlekin's features can be called up while working on a main application. Editor, file manipulation, monitor, calculator, ascii numbers are all available at any point, making the Atari a much more COMPLETE machine.

I had this program for several years on a magazine cover disk without looking at it, as up until then my experience with do-it-all accessories usually meant that I liked one feature but found all the rest ill-programmed and useless. Harlekin is streets ahead of this, even if one doesn't use all of its features; try it for yourself. The very fast reset-proof editor alone is worth loading the accessory for.

Surprisingly, though, very few people seem to use it. Harlekin 3 I found to have no significant advantages and still not completely Y2K compliant, but David Link of the marketers, Hi-Soft told me that he had tried to contact the programmers without success.

So, does anyone know the whereabouts of them today, as they must still be programming, but not, I suspect, on Ataris.

The names again:-

Hasse Wehner and Gert Gronning

(the o of Gronning should have a forward-slash through it)

Any leads will be followed up to the best of my ability in an endeavour to get them to update the program. Thank you.

A word of warning - a GAL is a programmable logic device. If you buy
one from a component supplier, you will get a blank (unprogrammed)
device, so you will also need the programming data and a means of
programming it. I could probably help you out with the programming
(although I would have to check if our programmer supports that part),
but you would still need to get hold of the programming data from
somewhere.

Ah.. but I have. I used a Macintosh Plus for quite a few years,
and certain games (Such as Creepy Castle) were quite sluggish on a 8 mhz
AtariST. This was cleared up when I kicked in the AdSpeedST to 16 mhz.
Worked just great.

>
> > And they don't work on Falcons at all. :(

Pine can call any external browser, if run under an xterm.
You could use Lynx, Netscape or whatever.

Agreed. I was thinking of putting up a site anyway just in case someone wanted to experiment with the Spectre in the future (like I did a while back) and hell, I would love to get a collection of Dave's articles and place them there. Though I don't use the Spectre GCR as much these days, I still have the manual as suggestive reading to any computer enthusiast. No kid. :)

Anyone have any articles they want to contribute? And does anyone also know a good address for Dave so I can TRY to ask his permission to post it (hell, I just want an excuse to say hi to the guy.)

Thanks folks!

Doctor Clu

You have now two Atari clubs in the area. The Atari swinger's club
who like to go to restrarants and chat on occation about Atari, which of
course would be the folks at AUNT, and the not quite so elegant, not
quite so "PC" group of computer enthusiasts in the "All Atari but
especially 8-bit group" known as JYBOLAC. :)
Yes, there is still Atarian life in DFW.

> Ron Hunter,

Did a 50 mile cycle-a-thon on the island of Guam once, does that
count for a marathon? :)

As for the stock piling, well, I paid my rent two months in
advance in case things fells through (and got receipts) and got about a
three week's supply of food.

But both of those are still useful to me. :)

So now I'm ready for the next storm/crisis that arrises.

Doctor Clu

On a side note....

Just comes to show that we truly do not know what the future
brings. With the year 2000 mark coming and going with nothing major
happening new years night, it was like the future was once again
returned to the true blank slate it has always been.
Or that is at least how I felt. (grin)

A great deal of Atari internet software is available on Flinny's page:

http://www.flinny.demon.co.uk/

Most people use Newsie, which does new and mail, and also has it's own
home page.

One thing that would be neat is a "Where are they now?" article
series on the Atari.org website in which different old heroes of
the Atari's golden years are interviewed.

Names that come to mind:

Charles F. Johnson (little green selector), the codeheads, Dave
Small, Dan Wilga (I know - he still posts on and off), Clayton
Walnum (C-manship), Bill Penner (Atari developper).

Any other suggestions?

Just to say I went to see Kevins Mega ST 4mb, great machine for £100.
Unfortunately my wife had insisted that I do not go over my £90 budget left
for this month (I must stop buying old Micros, but I CAN'T!).

Anyway, if anyone here is going over to see it I can say it looked a great
machine, and as I took up his time with general chit chat, I thought I would
give it a plug anyway........

Anyway, thanks for the offer of coffee Kev, and hope to speak to you again.

Regards,
Greg

Hi Galen,

Doug did not have an RGB display in his room at the time, so was unable to test that part of the installation other than check the wiring/connections etc. and he did fit the extra switch on the case.
I have since spoken to David Encill a couple of times on the phone about the problem, but it has never been resolved...
It is no big deal as I only ever wanted it to check out how fast some of those non-VGA demos could go ;-))

Thanks anyway for the repsonse.

Jim

This sounds like the problem with the Marpet Forget-me-clock. The clock
hardware is basically OK but the setter program is restricted to teh
same date range as yours.

> The cart clock hack proggie you have does work with my Eureka cart
(adds
> 20 yrs to whatever cart software is set at). I run it in the auto
folder

the year
> as 1980. If you use Shaw's clock setter, it works also, but clock.cpx
> still shows incorrectly.

This sounds about right: the problem is the part of the XBIOS problem
which the Hoepfl patch doesn't seem to fix.

> BTW, though Hoepfl's clock.cpx doesn't set 2000 (properly) on the
1040STf,
> it does work correctly on the Falcon and MagiCMac v6 G3. So I'm
assuming
> the same as you, that the patch isn't doing everything. Can't
understand
> all the docs...

The clock.cpx is fine under MagiC-PC and also under TOS, MiNT and MagiC
if the XBIOS problem is fully patched (I've been allowed to test that
patch George Moulder mentioned, but I can't distribute it as the author
is investigating ways of charging for it: it does work very well,
though, so far).

> P.S. Thanks for all the Y2K info at your web site :)

You're welcome. It's being updated daily at the moment good job I'm
still on holiday this week!).

With my falcon came 2 disks - a language disk and a Disk with
Extra-Programms. No Multi-TOS! The language-disk contains a HD-Driver and
some CPXes (Mouse-Acc./Printer/Colors etc.). On the extra-programs disk are:
AFM; Breakout; Calendars & Appointments; Falcon D2D; Landmine; Procalc; SAM
and Talking-Clock - that`s it!

I use to love reading stories about his wife and their 68 Camaro.
Didn't know about the divorce, sounded like they were pretty tight.
But then, all women leave, right Katherine? :)/

Grab a midi cable. Two things you can do. Midi net or STing.
If you use MidiNet you use the TT preferences for NEWsie.
If you use STing you can transfer files on the fly while online too:-).
Sorry to hear about the keyboard.

I never saw anything sluggish. Particularly when compared to a MAC? It runs
faster than "true Macintosh speed" on an ST. I don't know how you drew up
this assumption, unless you where using a Modern Mac to compare it with?

It is a Mac Plus emulator, and that is what you have to compare the speed
to. The ST Spectre 128 was not sluggish by any means. Compare to a Mac Plus
and the point will be easily proven.

Well, I never heard of him screwing his customers like the maker of another
030 accelerator of the same era.

He did leave alot to be accomplished yet. Such as getting the GCR to work
with system 7.

Anyways, I think he to needs a shrine like the Codeheads.
Anyone who can leave Atari without leaving behind bad feelings deserves
a shrine. Of course they are always welcome to come back too:-).

>cranky, too.

Use the Above URL.

The ftp site is not accessable anymore without some API or something
protocol.

The Automated system no longer can help find Atari files.

Finally some words of wisdom.

1) Don't post to NEWsgroups in HTML
2) Don't send BINARIES into a NEWSGROUP. IT is both Unwanted and RUDE.
(Unless it is a really bad diagram and you are asking people for help)

3) Your picture truly sucked!!!

Hope this helps.

Brian.

I am now using STiNG 1.22 with HSMODEM6 successfully, although I had
to set my Modem 2 speed to 57K from 114K. I also changed the
STING.INF to point to a new folder with the previous STx modules, so I
wouldn't mistakenly forget to replace them all.

Hi Andy,

Repost this using NEWSie or Pine under MiNT and let me know what kind
of ST hardware you need. If your in California, maybe your dad could
drive up and get the items.

Mike

339. How to install Marpet Ram board?

Newsgroup: comp.sys.atari.st
Date: 2000-01-05 00:00:00 UTC
From: Gio <ciampag@my-deja.com>
Message-ID: <84vf3k$p9t$1@nnrp1.deja.com>
Source record: 67687

I have a Marpet board from my (recently deceased) ST that I would like
to install on its replacement.

Unfortunately I cannot locate the instructions, and to make things worse
the motherboard on the replacement appears to be one of those that need
the parts to be soldered rather than inserted into a socket.

Can anyone help with either problem? I don't mind the soldering aspect
as I have a spare that I can practice on if necessary.

Thanks in advance...

Gio

I'm in the Manchester area as well, actually I'm in Bolton, just moved there from Salford. So I would be *very* interested. When you say fair condition, is that fair to good, or fair to bad <s>.

Anyway, maybe I could come over and have a view to purchase with you. Maybe you could drop e-mail me some details and we can arrange it. Any nights ok, or weekend.

Regards,
Greg

I never met Dave, but I know a guy who lived South of Fort Worth with
a Mega ST4 with his 030 accelerator in it who was a beta tester for
Dave Small. Was very expensive, but had a 030 at 40 mhz, fastram on a
Mega and more..

His Mega would boot, load Pagestream and load very large DTP file to
the screen before a Stacy we had a one meeting had even finished
booting to the desktop.

It was really need seeing the speed differance where you can
understand it's inpact.. If your still waiting for the computer to
boot, your not yet being productive with it..

Yet, now we have Windows on the PC and people are use to having to
wait, and wait, and wait even with lots more memory than an ST ever
thought of having..

Don't know if any of the old members are still around or using there
Atari's any more from when I was a member of DALACE, AUNT & the Fort
Worth Group all from about 1988 thru about 1991.

Ron Hunter,
The guys at Megabtye computers in hurst,
Even the guys who use to run the mostly mail order ATari shop north of
Hurst. Dave Muncie was one of the owners and I forget the other guys
name at the moment. They under cut alot of the dealers that existed
at that time in prices, but did some shakey deals also.

344. Telli, telnet client

Newsgroup: comp.sys.atari.st
Date: 2000-01-05 00:00:00 UTC
From: jmv@odsy.net
Message-ID: <5FGc4.3868$%67.291811@tw11.nn.bcandid.com>
Source record: 67692

I've been trying out Telli the telnet client for Iconnect. I'm using the English resource file for it. It has an option for a transfer program.

I would like to be able to do transfers while using a telnet session. What kind of a transfer program does Telli use? Does it support Zmodem? Is there an English doc file for the demo?

Any info is appreciated.

Joe in Lubbock, Texas--on the South Plains (southernmost part of the Great (high) Plains)

I have an Atari 1040e. Dont know much about it I really only use it
with 'Notator' for writing music. BUT its getting old! I need at least
a hard drive for it. Is there a PC emulator? If so how does it work? I
really am a bit of a ludite when it comes to all this computer stuff
(eg I only have web access at work) but Ive been writing music on it,
some used for radio broadcast for about 9 years and I don't want to a)
loose it all and b) have to learn a new programme so:- If anyone cane
help me with any info I'd appreciate it!
PS anyone in England still supporting Atari? That would be nice! Ta. Al

I was just answering a question for someone, and I realised that I have browser stuff for my Atari 1024Ste but no e-mail, what packages are available and where can I get an E-mail package from?

Any help appreciated as always,

Greg

348. Systems For Tommorrow purchases

Newsgroup: comp.sys.atari.st
Date: 2000-01-06 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <7J7d4.541$97.484@198.235.216.4>
Source record: 67496

Well, well well, Systems for Tommorrow came through as everyone said
they would. So, I am very happy in this regard.

I didn't buy any "NEW" software in as much as software that interested
and was hard to come by. Other purchases where made just to make the whole
endevour worth my while.

So here is a list of software I got and a couple problems for various
reasons.

Third Reich (Game hard to find)

Fast Club CD. I didn't know what was on it so, I kinda bought this blind.
I was hoping to find some more difficult to locate PD. It was
made in 1998, but the PD doesn't seem that current.

Unfortuneately, I can only see the directories. Whenever I
try to copy files to the HD or view files on the CD, I get a
device output error. Even when trying to read a .txt file.

All Things Falcon CD: Well it was dirt cheap, and it is all things falcon.
It would appear most of this is also available on the
Web.

Moving Pixels CD: Well I just wanted it and couldn't figure any easier way
to get the 70meg Tina Turner Video.

SubStation: I don't care if there are or are pirate copies of this. I
wanted the game because it supports Multi Users through Midi,
and that is worth the price of admission to me.

Um now one of my more foolish purchases. I simply saw WW1 Powermonger.
I ordered it not knowing that it said supplement to POWERMONGER, by
Bullfrog. Is this correct?

I need either Powermonger or someone needs to buy this from me still in the
wrapper:-).

Actually, I am more interested in if anyone has played Powermonger. Then
you can tell me what it is like:-). Perhaps I should have asked this
question before buying ;-P.

Regardless, I now have SubStation linked with my Falcon, STe, MSTe and this
is pretty fun. If I could live a little longer and it didn't ask for that
Password Protection every time you die:-(.

Well anyways, this was just a test to see how quick stuff is shipped and
such, so now I will buy stuff in the future without hesitation, of course,

I may post here for opinions on Software before I buy, next time:-).

Later Brian.

P.S. We really need a Good English Atari
Magazine!!!

I ordered it not knowing that it said supplement to POWERMONGER, by
Bullfrog. Is this correct?

I need either Powermonger or someone needs to buy this from me still in the
wrapper:-).

Actually, I am more interested in if anyone has played Powermonger. Then
you can tell me what it is like:-). Perhaps I should have asked this
question before buying ;-P.

Regardless, I now have SubStation linked with my Falcon, STe, MSTe and this
is pretty fun. If I could live a little longer and it didn't ask for that
Password Protection every time you die:-(.

Well anyways, this was just a test to see how quick stuff is shipped and
such, so now I will buy stuff in the future without hesitation, of course,

I may post here for opinions on Software before I buy, next time:-).

Later Brian.

P.S. We really need a Good English Atari
Magazine!!!

I'd settle for a functional 256 color x server for MiNT if nothing
else, at least that way we could run it remotely.

Hi,
I guess the problem with all that C compilers is that none of them
is still supported. Compilers like Lattice C, MWC, and others have
(as far as I know) some problems with ANSI compliance...

I think that there are 2 solutions to that questions:
1) Turbo C (Borland) but it might be tough to get a copy from wherever;
1) PureC V. 1.1 which bases on Turbo C, and has been distributed until 1992
or 1993.
There should be a lot of copies going around among Atari users. This
version
is certain to be ANSI compliant (if being configured accordingly).
This compiler had been (widely!) distributed by Application Systems
Heidelberg,
Germany.
So, my advice is to ask for this compiler. There should be a real chance to
purchase the SW from anyone, including license. I did so as well. It's
obvious
that there are a lot of former users who stopped to use the SW but still
have
a licensed issue that might be sold...

Regards Goetz

If it's Notator SL, that won't run on anything other
than a real Atari ST, not even an accelerated one.
Very, very tightly programmed.

>if u mean a PC emulator to use Atari software on a PC there are a few,but
>none support midi sequencers or dongles
>midi on the PC has timing problems,

Yes, varying with how it's set up. Cheap sound cards also
have bad MIDI, but on the whole, Atari MIDI is still generally
reckoned as the best (though check out the review of Emagic's
AMT8 unit in the current Sound on Sound, the reviewer thinks
it finally achieves "Atari-tight MIDI" on a non-Atari)

It sounds like you have an early STe with TOS 1.6. This has a bug in it
preventing it from booting up in medium res without a patch (it's fixed
on later STes with 1.62).

You should be able to find a patch for this on one of the main FTP
archives. I can't give you a full URL for a copy of the patch, but try
looking at ftp://ftp.funet.fi and ftp://chapelie.rma.ac.be

It will be called something like STEBOOT and will be an auto folder
program (ie drop it in a folder called AUTO on your boot disk).

For faster service, Please direct all replies through E-Mail to Ben at:
atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I
find it hard to keep up with NewsGroups.

NOW! For a limited time offer! Buy an Atari ST Computer and receive,
your choice, for ***FREE*** an ST Color or MonoChrome Monitor. That's
right, you too can have a Color or MonoChrome Monitor, made by Atari
when you buy an Atari ST Computer. Thats an SC1224 or an SM124 Monitor.
Customer pays shipping. While supplies last.

e-mail: atari@benjamin.net

Click for WebSite!

I've added more and will be adding more Hardware, Software, Books and
Accessories for Classic 8 Bit and Atari ST. So checkout what's new on
my WebSite. In Fact, check it regularly as my Catalogs are updated
regularly. Customer's are served, first come, first serve! I have 6
different Catalogs, and my SoftWare Catalogs are my largest. They have
the biggest Byte Count. You should see my inventory! I have TruckLoads
of HardWare, Boxes & Boxes of Software & Libraries of Books & Reference
Material for the Classic Atari 8 Bit & Atari ST! And remember, if you
can't come see me today, come see me tomorrow!

also, if you live in Portland, Oregon, interested in Atari and want to
meet with other Atarians. Read the Ad near the bottom of this message.

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-
Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at
http://www.atari.benjamin.net And Jump to my FTP site linked to my Web
Site so you can Download Free Catalogs or FTP directly to my site at:
ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way,
Feel free to Request catalogs through E-Mail. Really, it's not an
inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both!
Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail.
Please let me know if I can attach text files to your E-Mail. Catalogs
are just regular ASCII text files so you can download them into your
text editor and view them, edit them or print them out! It would make
things easier for me if you take my Catalogs, load them into your text
editor, delete what you don't want and E-Mail me the rest! To expedite
things, include your complete Mailing address so I can figure your
Shipping/Postage & Handling. I'll be back after the weekend.

If you have an Atari and live in Portland, Oregon. U.S.A. or vicinity, you are cordially invited to attend a Meeting of the Portland Atari Club. You don't have to be a member to attend. Now we've moved our meeting to a new night. Same Bat Time! Same Bat Channel! We meet the 2nd Thursday of each Month. Our Next meeting will be Thursday, January 13th, 7 pm at the Pizza Baron at 2604 S.E 122nd Avenue in Portland, Oregon. We're trying to rebuild our club so we're looking for Atarians who wan't to get involved in supporting other Atarians. If your interested, call Ben at (503)256-9974 and by all means, come to our meetings on the 2nd Thursday of the Month. For more info, surf the Web@

http://pac.pdxweb.net

e-mail: atari@benjamin.net

For more information or directions, please call our Vice President Ben Smith at (503)256-9974 See you there!

You should know I regularly add more Atari stock items to my catalogs and this weekend is no exception. A list of my new ST Software I just added to my Catalog are listed below. In case your wondering why my Catalogs (below) are formatted to 38 Columns. They are made to be compatible with the lowest common denominator. Also known as the Atari 8 Bit. Once the Classic Atari User converts the Carriage Returns to Atari 8 Bit.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or bensmith@teleport.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Most windows users have no idea at all about what their systems are doing (usually they don't care either),
and that things are designed that way. I am using this PC at work and I hope is not sending HTML to
the newsgroups.Yes, asking politely is usually more effective, as is better received but that doesn't change
the fact that it is wrong to use anything but text for newsgroups.

> 2. It was 20k. I have to agree with mike on that one. What type
> of modem are you connecting with 300 baud? A 28.8 modem will burn through

20k doesn't look that bad if it is one file, but if everyone feels that it is ok to send that kind of
stuff, we will have 2M (with 100 messages) of garbage a day, and that won't be nice. I think is better to
stop this before it starts. Besides, attaching images to posts is totally unnecessary and unpolite, specially when
the sender knows that his action is not welcome.

> 3. It's kind of rude to jump molin, the atari archive used to be
> the biggest and the best. And a big part of that reason was molin, who

Hi Gio,

I found the instrucions for "Marpet Xtra-RAM Deluxe", which I
installed in an ST I no longer have. Depending where you live, I
could mail it to you, but I'd like to have you return it when
you're done with it in case the guy I sold my ST to ever needs
the instrucions. The copyrite on the instructions is 1992. The
address it gives is:

Marpet Developements
Meadowfield Farm
Fellbeck, Pately Bridge
North Yorkshire HG3 5ET
Tel: 0423-712600 Fax: 0423-712601

It also gave as retailers:

Peak Electronics - Tel: 0429-860821
Analogic Computers - Tel: 081-546-9575

Hope that helps,

Clayton Murray
Seattle, WA USA

365. Falcon demos on VGA

Newsgroup: comp.sys.atari.st
Date: 2000-01-06 00:00:00 UTC
From: Artur Stachon <astachon@intergate.bc.ca>
Message-ID: <387596DE.6CB2B7D9@intergate.bc.ca>
Source record: 67513

How come 90% of Atari Falcon demos won't work on VGA monitor ? What do I need
to do to see them on my VGA monitor ? I am sick of little Atari ST monitors - can't stand them ! Is there any emulator that would make Falcon see my VGA monitor as Atari monitor or whatever needed so I can see Falcon demos ? It won't work in "ST compatible modes" I tried already. Also, is there any good emulator except "Dawnwards" to play STe games on Falcon ? I tried with TOS ROM switching program to make Falcon behave like STe but it always re-boots and overwrites all.
Thanks,

Artur

Oh, please. Lighten up. I forgot we Atarians used to have to
worry about a whopping 20K.

:)

Well, thank you. I had completely forgotten that we Atarians
used to have to worry about a piddling 20K. I figured that
was no longer a problem when we graduated to 512K of RAM.

: Yes DVD-data, but what about DVD-video with copy-protected and region-
: code that has to be cheked. Not to speak about the official secrecy
: surrounding the keys and decoding of videostreams...
: The reason no DVD-video is on Linux: you have to pay 5000 dollars for
: the license plus a non-disclosure agreement and the operating system
: has to be able to keep decoded data outside reach of users who want
: to copy digitally.

I doubt that this will prove much of a problem anymore; a Norwegian Linux
hacker has cracked the DVD encryption code. With the aid of a port of this
software and the hardware MPEG decoding of a modern graphics card, even an
ST should be able to replay DVD video.

Due to the -- Motorola-undocumented :)... -- way of preventing crashes of Mac programs writing at address $0 (in ROM on Atari's) that is highly 68000-dependant, it seems normal. Unless Dave made a special version for 68010+, esp. for his wonderful acc. board !

389. Porting Netscape to the ST

Newsgroup: comp.sys.atari.st
Date: 2000-01-06 00:00:00 UTC
From: Iggy Drougge <optimus@uno.canit.se>
Message-ID: <85298o$ll1$1@dos.canit.se>
Source record: 67566

With Netscape Navigator being released as open-source, shouldn't it be possible to port it to an Atari OS? The obvious choice would be MiNT, of course. While it is a big, resource-hungry program, I'm certain that it could be worked down to its essentials and come in handy for those sites which won't work with CAB, or for testing of HTML documents, not to mention showing off. ^_-

Already heard some good things about it from you and others... Just
wondered if there was another choice. I will have to try it and
eventually use it under MiNT when I have no more connection at school
:)...

Thanks for the info,
G.

This was discussed several times previously and the answer is no.

* requires X11R6 support - MiNT is still only at R5
* several missing function prototypes in MiNT lib
* several things handled differently than on other Unices on MiNT
* a Linux 68k port proved this would be too slow to use on Atari

Apparently he has the disk, but can't read it. It seems to have gone bad. You need not worry about compatibility, since he has a stock ST, and the clock works, or worked, but just can't access the program. If you could zip, arc, lzh, or msa the whole disk and send it to me, I'll forward it to him. I'm sure he'll appreciate it.

>> Cheer's Jï¿½rgen

Thanks ! Another problem occurs on my Milan when I use Xcontrol.
It refuses to load all the CPX's ! In Zcontrol the Sting Internal cpx
refuses to open (the other cpx's do open) And in Cops I can open
and activate the Sting internals cpx, but when I reboot this cpx is
not visible anymore. Really strange that it occurs on some Milans
and not on other's.

>and Talking-Clock - that`s it!

Wauw! You were lucky. 'Landmine' was not on my disk. Is it fun?
Nah, don't think so...
I have reason to believe Multitos was supplied with German Falcons.

Certainly Linux would be dead slow on a 68030 machine, and
probably a 68040 as well, but what about Linux on a 68060 (Medusa,
Hades, Milan060, or Phoenix) or PowerPC (when Tempest comes out)?
This might make it a bit more feasible, yes? no? 060 and PPC
machines are obviously the way Atari machines are going, so this
kind of support might be quite useful for some. Just a thought...

if u mean a PC emulator to use Atari software on a PC there are a few,but
none support midi sequencers or dongles
midi on the PC has timing problems,your old 1040 will be more accurate
check out the emulator page on my site

Hi Dan,

It wasn't me who sent the e-mail but I did remember something useful
that might help those who have been having problems with the Milan Serial CPX.

I have found that the Sting dialer will only function with the Milan Serial CPX
if Peter Rottengater's Serial CPX is present and active. It is not necessary to
use Peter R's CPX it just seems to be needed by the Milan Serial CPX.

Source record: 67583

Hello !

I have a small problem : I want to send a small program to the IKBD, then have it execute it. I am sure this is possible, since the IKBD has a small RAM, and I read some allusions to this possibility.

My ultimate goal is dumping the IKBD ROM, to test a (free, not finished) Atari ST emulator. Well, it may sound silly, but my primary goal is emulation accuracy, not efficiency, so I think emulating the HD6301 is a good idea.

If possible, you can mail a copy of your reply directly to me.

Thanks in advance,

Raphael Nabet

>--
> ._____. http://www.mich.com/~molin/ ._____.

Funny how I got both your messages but no one elses...

Anway I just wanted to pipe in with a couple of things.

1. There is no reason to jump all over for some one for a one
time post of a binary picture into this newsgroup. Politely asking them
to not do it will generally solve the problem. Most windows users forget
that there system is doing it.

2. It was 20k. I have to agree with mike on that one. What type
of modem are you connecting with 300 baud? A 28.8 modem will burn through
20k in the matter of a few seconds. Annoying but not in the range of
screaming at him.

3. It's kind of rude to jump molin, the atari archive used to be
the biggest and the best. And a big part of that reason was molin, who
was somewhat local and able to negotiate things for us.

4. A repeat of the above. His name might not pop into your mind
as fast as howard chu or entropy or maybe you've been around long enough
to remember mickey boyd, but he did alot of work to keep our platform
alive. While I don't think he is primarily an atari user anymore, doesn't
mean he's not still an enthusiast. I bet if you gave him a good price he
might even think about getting a modern clone. So why should we as a
group put forward an attitude that frankly makes some of the PC groups
look mature? It's definately not the way to keep people supporting the
platform.

5. Molin this is for you. yes I can't get in either. It seems to
be looking for some authentication and it's not even letting me connect to
see if my account is still there. I was speaking to someone there awhile
back to see if they were going to continue our accounts, but in the end I
never heard a definative answer back. So maybe we've gotten our answer :/
To be honest though the last time I was on in december I couldn't get off
the machine to pull any files on. Lynx and ftp were both behaving
erratically.

Well that's my rambline $1.89...

411. Help with overheating STe?

Newsgroup: comp.sys.atari.st
Date: 2000-01-06 00:00:00 UTC
From: steve <schilds@nildram.co.uk>
Message-ID: <853085$6ko$1@supernews.com>
Source record: 67588

The STe I use for sequencing has developed a problem. It runs for 30-40 minutes no problem then just crashes out of the current application back to the desktop or freezes up. If I try to re-boot it wont start up at all, access the floppy or anything. If I leave it for a while (15 mins) it runs OK for a half hour again.

I thought it might be tenperature related - but the CPU doesn't run hot on Atair's does it? I also changed the power supply 'cause I heard they are delicate.

I'd appreciate anybody's suggestions.

schilds@nildram.co.uk

John,

Thanks for taking the time to make the offer, but I'm afraid its far to high for me, actually I usually have a £150.00 budget I leave myself for classic gear, but I am already down to £90.00 after a couple of purchases, and a rubber keyed 48k spectrum £5.00!!, I was programming on it last night, a real joy.

Its a shame though 'cause it sounds like it is in its original specification as well.

Regards,
Greg

I recommend aMail - from the same author as aFTP.
Works on STiNG, STiK, Draconis, IConnect, MintNET (Impressive ;-)
http://atack.atari.org (if the atari.org server is back up again ;-)

Hi all,

Where can I find bitmap fonts which I could use with NVDI 5.03 as a system font. I am using the supplied Monaco font, but are there any others available/suitable?

Thanks,

Jerry

Since I'm an XBoot / MagiC user as well, I'd certainly like to try that
patch. What's it called and where can I find it???

>
>Sue ASH for not supporting all Atari keyboard layouts and
>hardcoding the key layout in some of their applications.
Why? ASH is a German distributor, distributing German software for
computers with a German keyboard... selling German software to the
German userbase. Sounds to me you're gonna loose that lawsuit ;-)

If I was you, I would think twice before throwing mud at ASH, like
you've been doing a lot lately, they might sue you.... and win ;-)

If you want to sue anyone go after the official English/French
distributors...

Cheers from Belgium
Dennis

Yes, download keytbl.prg from http://www.jumpgates.com/skydiver and your
problem will be solved ;-)

Extract from the docs:
"keytbl makes it possible to switch between the keyboard layouts of
several languages at any time. The current setting is displayed at
the menu bar.Supports the XSSI cookie which is used by various screen
savers. Keytbl runs only under MagiC (Atari/Mac/PC)."

Hi Fredrik

>oki.. 2nd try here.. I want a keyboard for my falcon; TT/MegaST/STE..
>does anyone out there want to sell me one? Or know anyone else that will?

OK, fifth and definitely the last time:

Keyboards for the TT/MegaSTE can be bought in Germany from most dealers.
These keyboards are brand new, but have the German keyboard layout, so
you'll have to switch the keycaps which is quiet easy.

TT/MegaSTE/Mega ==> 39 DM
1040 ==> 19 DM
Falcon ==> 19 DM (without keyboard processor)
Falcon ==> 19 DM (keyboard processor)

Hi Peter,

>>The patch and magxb32.prg should now be in your mailbox :-)
>
>Any chance of sending me a copy too please, Dennis? I seem to have only
>magxboot (978 bytes) in my auto\, and the patch would be useful too -
They should be both in your mailbox now aswell...
Magxb32.prg comes with every MagiC (Atari) distribution. You can find it
in the folder Utilities/extra. It will prevent the kernel from being
overwritten, and will also allow the use of virtual memory (Outside).

The patch for xboot is just a small hack that someone years ago wrote to
help me out, it's a small program that patches xboot.

>>BTW: I have just noticed that the "set time and date" option in XBoot
>>is not YK2 compatible...
>
>Yep - does very strange things...
Setting up the time and date can be done with other utilities. As for the
creation of new sets, a possible solution is to edit the file set.dat in
an editor.

Just a quick curiosity question...

I've seen a number of TOS and Falcon patch programs floating
around, but most either don't have any documentation telling exactly
what they patch, or are in a language I can't read. Is there
somewhere I can find out what each of them are used for? Thanks!

This is digging deep into memory (mine, not the computer's) but I
guess that any GEM font will do. The PD libraries must be full of
these. Failing that FontKit will convert Signum fonts to GEM fonts.

Myself I never see any reason to change from the standard Atari font
- it is clear and readable and looks OK.

Did you try to run the STe with open cover to verify it is really a
thermical problem?
I didn't remember someone else ever have thermical problems with a
normal ST or STe.
But if the computer runs fine without the cover and crashes after half
an hour with cover you can be sure it's realy a thermical problem.
In this case you have to find out which part will get to hot to cool it.

441. Systems For Tommorrow purchases

Newsgroup: comp.sys.atari.st
Date: 2000-01-07 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <i0ad4.975$97.424@198.235.216.4>
Source record: 67518

Well, well well, Systems for Tommorrow came through as everyone said
they would. So, I am very happy in this regard.

I didn't buy any "NEW" software in as much as software that interested
and was hard to come by. Other purchases where made just to make the whole
endevour worth my while.

So here is a list of software I got and a couple problems for various
reasons.

Third Reich (Game hard to find)

Fast Club CD. I didn't know what was on it so, I kinda bought this blind.
I was hoping to find some more difficult to locate PD. It was
made in 1998, but the PD doesn't seem that current.

Unfortuneately, I can only see the directories. Whenever I
try to copy files to the HD or view files on the CD, I get a
device output error. Even when trying to read a .txt file.

All Things Falcon CD: Well it was dirt cheap, and it is all things falcon.
It would appear most of this is also available on the
Web.

Moving Pixels CD: Well I just wanted it and couldn't figure any easier way
to get the 70meg Tina Turner Video.

SubStation: I don't care if there are or are pirate copies of this. I
wanted the game because it supports Multi Users through Midi,
and that is worth the price of admission to me.

Um now one of my more foolish purchases. I simply saw WW1 Powermonger.
I ordered it not knowing that it said supplement to POWERMONGER, by
Bullfrog. Is this correct?

I need either Powermonger or someone needs to buy this from me still in the
wrapper:-).

Actually, I am more interested in if anyone has played Powermonger. Then
you can tell me what it is like:-). Perhaps I should have asked this
question before buying ;-P.

Regardless, I now have SubStation linked with my Falcon, STe, MSTe and this
is pretty fun. If I could live a little longer and it didn't ask for that
Password Protection every time you die:-(.

Well anyways, this was just a test to see how quick stuff is shipped and
such, so now I will buy stuff in the future without hesitation, of course,

I may post here for opinions on Software before I buy, next time:-).

Later Brian.

Ok, we have heard it all before.

Anyways there is a spammer that i believe should be easy to track.

But I don't know what I am doing:-).

So tell me what I need to do. And who to contact with the information.
Url and Such.

I hope all the information can be found in the Post itself?
Is this how its done?
Tell me in the clearest possible manner what I need to do.
I will do it and eradicate this Business:-).
I am on a mission as this guy told me he is going to continue his Spam.
This is not with any regard to this NG , but another NG I am in.

Finally what possible punishments, or what have you can occur to the said
Spammer if caught?

Thanks in advance.

Brian.

Message-ID: <V5ad4.1037$97.534@198.235.216.4>
Source record: 67522

Well, well well, Systems for Tommorrow came through as everyone said
they would. So, I am very happy in this regard.

I didn't buy any "NEW" software in as much as software that interested
and was hard to come by. Other purchases where made just to make the whole
endevour worth my while.

So here is a list of software I got and a couple problems for various
reasons.

Third Reich (Game hard to find)

Fast Club CD. I didn't know what was on it so, I kinda bought this blind.
I was hoping to find some more difficult to locate PD. It was
made in 1998, but the PD doesn't seem that current.

Unfortuneately, I can only see the directories. Whenever I
try to copy files to the HD or view files on the CD, I get a
device output error. Even when trying to read a .txt file.

All Things Falcon CD: Well it was dirt cheap, and it is all things falcon.
It would appear most of this is also available on the
Web.

Moving Pixels CD: Well I just wanted it and couldn't figure any easier way
to get the 70meg Tina Turner Video.

SubStation: I don't care if there are or are pirate copies of this. I
wanted the game because it supports Multi Users through Midi,
and that is worth the price of admission to me.

Um now one of my more foolish purchases. I simply saw WW1 Powermonger.
I ordered it not knowing that it said supplement to POWERMONGER, by
Bullfrog. Is this correct?

I need either Powermonger or someone needs to buy this from me still in the
wrapper:-).

Actually, I am more interested in if anyone has played Powermonger. Then
you can tell me what it is like:-). Perhaps I should have asked this
question before buying ;-P.

Regardless, I now have SubStation linked with my Falcon, STe, MSTe and this
is pretty fun. If I could live a little longer and it didn't ask for that
Password Protection every time you die:-(.

Well anyways, this was just a test to see how quick stuff is shipped and
such, so now I will buy stuff in the future without hesitation, of course,

I may post here for opinions on Software before I buy, next time:-).

Are Ataris that were sold and used in the US useable as-is in Europe? Do the power supplies have to be changed, or what?

Also, I'm going to be putting a complete ST system or two up for auction at eBay, and I'm wondering if the shipping costs and/or taxes and tariffs make bidding by European users impractical.

Comments?

Sorry about the ---snip--- Brian but I felt (what I consider) the most
important part of your post should stand out....PIRACY...! I've NEVER
(in my 14 years useing Atari products) bought a pirated piece of software!
If everyone felt like that, then (maybe) we'd have a few more programmers
around still writing for the TOS platform!

454. Sigh-jet... Cartridge Eject??

Newsgroup: comp.sys.atari.st
Date: 2000-01-07 00:00:00 UTC
From: claytone@aa.net
Message-ID: <3875ad56_1@huge.aa.net>
Source record: 67531

Hello,

I just got a Syquest "Syjet 1.5" (1.5gig removable cartidge SCSI drive). I hooked it up to my Falcon, partitioned it, and copied most of my IDE drive's contents to it. So far, everything is fine. Now, I'm ready to remove the cartridge and shut everything off. Surprise!, it won't eject. It beeps once and I can hear it click a few times, then nothing. The manual says I can remove it by hand after it's been off for 45 seconds, but I'd really like to get it working RIGHT. It also says if the cartridge won't eject, it's because it is "locked". Then it goes on to say you have to use the software included on a floppy in order to "unlock" the drive. Aaaarrrgghhh! I DON'T HAVE A !@#*%! PC COMPUTER, so the software is useless.

I suspect that there must be someone in this NG who has figured out how to get around this. I'm using Falcon/ TOS 4.04/ ICD harddrive software and utilities. Any ideas?

Thanks,

Clayton Murray
Seattle, WA USA
claytone@aa.net

By the way, Other World Computing is selling a Syquest "Syjet 1.5" drive (with 1 cartridge) for $69. A 1.5gig cartridge is $45. A drive (without cartridge) is $39. http://shop.macsales.com

Hi!

Dennis Vermeire <dennis.vermeire@wanadoo.be> wrote:
> This is fun :-), have you ever heard of a quoted-printable MIME format?

Yes. Have you ever read RFC 2045-2049?

> come to think of it.... is quoted printable allowed in newsgroups according
> to the RFC standards?

Yes, although there's room for interpretation. RFC 850 (which defines
the "Standard for Interchange of USENET Message") states that "all
USENET news articles must be formatted as valid ARPANET mail messages,
according to the ARPANET standard RFC 822."

The MIME RFCs now are an extension to RFC 822 (especially because it
only said very little about message bodies), so it makes sense to apply
MIME not only to mail messages, but to USENET messages as well. And
it seems most (if not all) modern news readers support MIME and also
post MIME-conformant, i.e. they include at least a Content-Type and
Content-Transfer-Encoding header.

And, as one can easily check, RFC 2045 predefines five
Transfer-Encodings for MIME messages: 7bit, 8bit, binary, base64, and
quoted-printable.

> Now comes the question... who converted the news posting in quoted printable
> instead of 8bit encoded?

Most likely one of the news servers transporting the message, because
actually, mail and news bodies have to be 7bit only (when strictly
following RFC 822/850), so only encoding an article containing 8bit
characters using quoted-printables (or base64, but that's not at all
human-readable without a decoder) ensures this is enforced. You'll also
find at lot of mail daemons which auto-convert 8bit-messages to quoted
printable, often noticed by an additional X-header field.

Ciao

458. Re: SERIAL CPX MILAN MAIL

Newsgroup: comp.sys.atari.st
Date: 2000-01-07 00:00:00 UTC
From: Bob King <robert.king@patent.gov.uk>
Message-ID: <3875C800.352D15D7@patent.gov.uk>
Source record: 67535

Hi Peter,

it could have been me starting all this off. I found, with a great deal
of help from others, that I had to reconnect the serial ribbon cable to
COM3 and use Peter R's CPX using the tag MODEM2. I found Milan Serial
CPX to be useless and refered to the ports under different names. I also
amended my ROUTE.TAB.

The only problem with the Milan/CAB combo for me is the frequent lock-up
from which you cannot get out (I can with Falcon/Magic) and frequent
'Fatal memory broken/damage F:/STIK ..... ' or the like message, though
the program carries on as if nothing's happened. I was much happier
being on line with my Falcon/Magic than Milan/NAES, though of course the
Falcon is much slower.

As an aside, is Magic Milan now available as an add-on or do I have to
wait for the one built into Milan 2.

Bob King.

460. HELP With HD and MagiC!

Newsgroup: comp.sys.atari.st
Date: 2000-01-07 00:00:00 UTC
From: Bruce <brew@fast.net>
Message-ID: <s7buum3qoj854@corp.supernews.com>
Source record: 67537

I recently purchased a TT. It came with HARDDISK DRIVER V6 preinstalled on it and work fine on th einternal 105 meg drive. I installed MagiC 6 and it was happy. Then I got a Syquest drive and couldn't get it to work with HD6 (I don't know who made HD6, it wasn't Atari's though). I tried ICD HD v6.something and it recognized the Syquest drive so I (foolishly) made the internal HD boot from ICD so I could use all my drives at once, upon rebooting MagiC would no longer boot. Told me GEMDOS was corrupt... I tried reinstalling MagiC and had the same problem. I don't have the disks for this phantom HD6 driver but I tried the Atari's HD driver 6 (the one that shipped with the Falcon030) and now I cannot get my drive to auto-boot anymore.

I was hopeing someone could help me with MagiC/ICD problems..? And/or the latest/greatest HD Driver people are using with MagiC? I really want to use MagiC and boot from my internal HD, if I need to boo tmy syquest drive seperately I don't care, I only use it for backups anyway... Thanks in advance for any help!

Hi Bob

First, just delete Sting's cache.dns, it creates a new one, and see if
this helps with your resolving and locking problem.
Second, yes you can buy Magic Milan if you want, just go to ASH
homepage and check it out. http://www.application-systems.de
Hope I remeber the address correctly.

463. Re: Falcon demos on VGA

Newsgroup: comp.sys.atari.st
Date: 2000-01-07 00:00:00 UTC
From: Fredrik Egeberg <deez@algonet.se>
Message-ID: <Pine.SOL.4.10.10001071657580.25625-100000@kairos.algonet.se>
Source record: 67540

> How come 90% of Atari Falcon demos won't work on VGA monitor ? What do I
> need

the reason why most demos only run in RGB is coz we (the democoders)
atleast in the beginning mostly had RGBmonitors or TVs.. and coding on RGB
is somewhat "easier".. this is related to the fact that most demos runs
there effects not in 320*200 or so but in 320*100 or simaliar, the falcon
isnt fast enof to make it in 320*200.. so on RGB you can set 320*100 and
"stretch" the pixels (linedoubling) vertical.. to make a 320*100 cover
whole screen.. this is done bu hardware.. on VGA the same isnt possible
unless you use 100Hz frequency.. but many older VGAmonitors cannot cope
with 100Hz correctly, hence the distored image on many demos on
VGAmonitors.

These days most of us make demos VGA and RGB compatible though. I prefer
demos on RGB.. since you know it will work on TVs and RGBmonitors.. and
you dont have to bother about linedoubling pixels yourself.. but VGA is
ofcoz easier on your eyes since you dont have interlace mode.

one way to get around must be to get a multisync capable of RGB signals to
watch both RGB and VGA demos.. i heard the NEC 3D is one cool (old)
monitor able to cope with many different signals..

Soleminez (Someone else can spell it) works on my VGA monitor.
However this demo seems to hang on my about half way through just playing
music and the screen frozen. Same with RGB.

>It won't work in "ST compatible modes" I tried
>already. Also, is there any good emulator except "Dawnwards" to play STe
>games on Falcon

Many STe games I have work out of the box. And "Backwards" should do the
trick for many others. The list is pretty extensive. I don't know what the
latest version is?

? I tried with TOS ROM switching program to make Falcon
>behave like STe but it always re-boots and overwrites all.
>Thanks,

Why don't you just connect your Falcon to the TV? That screen should be big
enough for you? And for Demos it is perfect.

Hope this helps.

>I hope all the information can be found in the Post itself?
>Is this how its done?

If you view the full headers you should be able to trace the service provider it came from. But I'm not an expert on this - messages can get routed through various servers on its way to you because of the nature of the internet and you need to be able to spot the very first one. Can anyone else give some pointers?

Also be aware that a lot of clever programs these days can forge headers so they appear to come from somewhere else or from a totally non-existant server.

Once you have found the server, simply forward the mail to abuse@service_provider, for example if the originator was spammer@hotmail.com you would forward it to abuse@hotmail.com

You will then probably get an automated message back saying the matter will be looked into.

>I am on a mission as this guy told me he is going to continue his Spam.

Since this appears to be a personal vendetta by him against you, it's probably coming from his own account rather than a mass-generated emailing program, so you probably have more chance of success.

>Finally what possible punishments, or what have you can occur to the said
>Spammer if caught?

As far as I'm aware, the only possible action is that the ISP will terminate his account. But then he'll just set up another one! that's particularly true for mass commercial spams as they just open an account purely for that occasion. They couldn't care less if that account then gets terminated.

The stupid commercial spammers also include their own business address or phone number in the mail - if you forward the mail to a "human" as opposed to the "abuse" handler (e.g. postmaster@service_provider) then they might look into it more deeply and prosecute the company for spamming.

From: atarist@xs4all.nl
Message-ID: <855fm0$57h$1@news1.xs4all.nl>
Source record: 67543

My 1040 Ste has a forget-me-clock in the ROM-port.
Booring with the sofwtare in the auto-folder gives me the message

05/01/00

so the year 2000 is there and is added to the system I think.
At least that happened in 1999 for year 1999.
But al my files are getting a date/time stamp of the year 1990

How come?

Met vriendelijke groet,
Ronald van der Kamp

i know that.. and that is a part of the problem.. since theres a sort of "tradition" to code demo 320*100 (for example) then making them 160*200 isnt the first thing you think about.. really only good reason i can find for not using 160*200.. and since its just eaiser to go with the 100Hz trick.. i havent seen a demo in 160*200 yet

I did get a reply and he mailed me a small mouse-on MSCON.TOS program,
but I was not sure how to access it when the mouse pointer disappears :-)
Actually, I have found that the mouse pointer only disappears when you
access the sub-menus in Profile2; by trial and error you can get MagiC's
program select list up and move down to 'start program...' and use the
auto-completion of the file selector to find mouseon.prg to switch the
mouse back on. This is better than mscon.tos as that leaves a blank
screen after use (or a VT52 window) and in any case doesn't show up in
the file selector, because this is preset with *.PRG,*.APP ands so
doesn't show *.TOS programs.

I have now also tried 'File/Full report' and that writes everything to a
file OK, so Profile2 remains usable...

>ITMT sysinfo will do almost exactly the same job - you can download it from

>come to think of it.... is quoted printable allowed in newsgroups according
>to the RFC standards? I think that's the reason behind it....

I think you'll find that qp is the default option of some mailers, which people have forgoptten to alter. I got some attachments like that from Thomas Binder, I think, early on in our Thing correspondence. Since MIMEd messages only contain characters 32 to 127, the only character that was in fact in qp format was '=' which came out as '=3D', and the lines containing this were longer than the rest. I simply used search and replace in a text editor to remove the '3D' and after that the file decoded OK.

CixComm/Read that I use cannot decode MIME automatically. I have seen a number of messages that appear to be in plain text but still start with something like : 'This message is in Mime format which your mailer can't understand' - but though it had the usual Mime headers everything else was plain ASCII!

Also some (Windoze?) mailers hang an HTML version onto mail as a default - I have seen some in this ng. Again, ignorance or carelessness by the users.

>Atari a much more COMPLETE machine.

Agreed - I have always loved this ACC and use it constantly. I actually
bought all 3 versions, before 2 appeared on a cover disk. The editor
is very fast to scroll, the monitor shows both binary and ASCII and
allows editing the file or disk contents and is scrollable continuously,
not just shown in separate sectors or half-sectors like Dade or Knife.
There is also a macro recorder built in, a keyboard remapper, a sort
facility, customable printer driver, resetproof RAM-disk...

>Surprisingly, though, very few people seem to use it. Harlekin 3 I
>found to have no significant advantages

The main one is that you have four edit windows, though the text is
loaded and unloaded each time you change. But it does come up in the
same position when you go back to it.

> and still not completely Y2K
>compliant, but David Link of the marketers, Hi-Soft told me that he had

Oops, apologies: it's not Zcontrol which has a y2k problem, but
Neocontrol (which I *presume* has something to do with Neodesk). Comes
of relying on my memory...

Other than the y2k problem (mentioned in a recent post here - it
wouldn't set a 00 date for someone, when Xcontrol would) I know nothing
about Neocontrol.

I bought it from Systems For Tomorrow about 6 months ago, and despite a
few small bugs, it's quite useful. I've used it extensively for many of
the graphics on my web site.

Now if you want to talk about a slow, nearly useless, over-priced graphics
program, allow me to introduce you to PixArt 4. I paid twice as much
for it as Positive Image 2, but the only thing it can reliably do is
demonstrate [to non-Atari users] how TOS shows all these "neat little
bombs" when something crashes.

Hi Peter,

Thank you for your reply regarding the Harlekin program's authors.

You said:

>The last address I had for the authors is
> Mermaid Group, Voldbjergvej 16, DK-8240 Risskov, Denmark
> Tel. +45 86 17 57 26, Fax +45 86 17 67 86
>but that was many years ago and I have no idea if they are still there.

I'm glad to find another Harlekin enthusiast, and I may mail you direct
about queries on some of the finer points if that's OK.

The address etc that you give is the one in the manual, and I haven't
tried it, as presumably this would be where David Link tried to contact
them when he wanted to commission an update.

I have never used the manager function which the authors seem to have
been very proud of, but use the program solely for its excellent
utilities, especially the editor.

The problems I have found are:

1) The date is not handled completely correctly after 1999, using : ;
< and = instead of numerals in the tens column (I am interested that
you say the file selector is a HiSoft one and presumably used in other
programs of theirs if this is so. I wonder if they will make it Y2K
compliant?),

2) Every file save produces a back-up, and this feature can't be
switched off. It can cause loss of data on a disk based system if there
isn't room on the disk for two files instead of one.

3) The ramdisk option can't produce a ramdisk above a certain size
(just over 1Mb I recall), and this is marginal for my use. The back-up
feature mentioned above is a pain when saving the contents of the
ramdisk, as is the fact that contents of the ramdisk are deleted as
part of the save operation. Two opportunities in one action of losing
all the data contained in the ramdisk!

4) The macro functions on version 3 seem to have been cut down
compared with version 2.

These are very minor niggles about an exceptional program, and I don't
think other people realise what they are missing.

Regards,

George Moulder

>Zcontrol is apparently not y2k compliant, so forget it.

I still using zcontrol. True it isn't y2k compliant but as long as you
don't set the time with zcontrol everything should be fine. To set the
time I use clock.cpx.
On MiNT with memory protection however you should better avoid zcontrol as
it surely doesn't like memory protection.

>installed. Some people have had trouble with some versions of it, but I
>use 1.06 and it seems pretty stable to me. I suspect it's happier under
>MagiC than under MiNT.

Stable it is even under MiNT/N_AES. With N_AES you've to use wdialog
however. Personaly I don't like Cops.
>
>The only other one I know of is the second version of the Freedom
>replacement file selector. I think this supports ECPXs too. This seemed
>to have a whole lot of its own troubles as it allegedly uses some

Freedom v2.5 is on my Hades very stable but I don't use Freedom's control
panel. I don't like it.

>
>Boils down to a choice between Xcontrol and COPS, the latter only being
>an option if you have a multitasking OS.

Again Zcontrol can be used as long as you don't set the time using
zcontrol owns timesetup panel. As said I use it daily on both my machines
(Hades 060, TT 030) without any problem.

Which fast club CD?! They make several :-)
I just got Fast CLub CD #3

It could be a problem with your CD rom drive. I have a Mediavision Reno drive which has the sort of problems you describe when trying to read blue surfaced (re-writeable ?) discs. My PC's CD rom can read the discs ok. If you have access to another drive it's worth checking to see if it can read the files.

I find PixArt 4 very stable, certainly doesn't crash
enough to stick in my mind. Its functions are also,
in my opinion, "artistic" rather than merely a
demonstration of how to program in GEM.

487. Re: How to plug a new keyboard on my ste ??

Newsgroup: comp.sys.atari.st
Date: 2000-01-08 00:00:00 UTC
From: G T Martin <gtmartin@aladdin.clara.co.uk>
Message-ID: <Y_Od4.2050$UL1.40226@nnrp4.clara.net>
Source record: 67414

The keyboard on the ste is only connected with a plug in connector, and sits lose in the case. So just undo the case by taking the screws out at the back surronding the border (the three inner screws are just to hold the floppy in place), and unplug the keyboard, then plug a new working keyboard in. You can't plug it in the wrong way as it has a blank pin and blank on the connector itself.

Your probably just best buying a second hand ST, using the keyboard and keep the rest as spares, ST's go for around ?30 - ?50 pounds in the UK, though check with System Solutions, they may sell you a keyboard cheaper.

Regards.

488. RAMDISK.XFS, CAB Cache problems

Newsgroup: comp.sys.atari.st
Date: 2000-01-08 00:00:00 UTC
From: jtmartin@gofree.indigo.ie
Message-ID: <DnPd4.4382$J9.2671@news.indigo.ie>
Source record: 67415

Hello again!

Firstly, thanks Dennis for the RAMDISK.XFS. It's brilliant. A ramdisk which dynamically allocates memory - neat!

Now my problem. Why do the weird things always happen to me!
As a refresher, I am using CAB 2.7c on a C-LAB Falcon MK.X running MagiC 5.11, NVDI 5.03 and Thing.

If I use the RAMDISK (Installed as Z or as Ramdisk/ Drive U) for CAB's cache, cab seems to display all pages as source html only! I took a quick look at what was been written to the ramdisk and it seems that the filenames in CAB's cache are being truncated without their extenders, so CAB doesn't know what they are! For example, a file which should be 00000002.htm appears in cab's cache on the ramdisk as 00000002 !!!!! I have tried some older (not so nice) ramdisks, and this problem does not occur. Is this a problem with CAB 2.7c and VFAT partitions, or am I doing something wrong? (Mind you, putting CAB's cache on a ramdisk does seem to speed things up a little bit... every little helps!)

Help please! ;-)

490. Only 6 ACCs!

Newsgroup: comp.sys.atari.st
Date: 2000-01-08 00:00:00 UTC
From: george@moulder77.freeserve.co.uk
Message-ID: <858i0i$d8c$1@newsg2.svr.pol.co.uk>
Source record: 67417

One of the most annoying things about the Atari is the six-only accessory slots, which often have to be wasted on menial single-purpose programs (ie Pulldown, if it used instead of SafeMenu; yes, I know Pulldown has a mouse accelerator but nearly every utility seems to have one, and they all conflict so are rarely used).

I have recently come across NewStuffer (rev 1.2 Beta, dated 1995:10:01) and had high hopes for that, but it has problems with AutoRaise 2.0 and MonKey. Is there a later version available?

ACCs like AutoRaise 2.0 I would prefer to be an auto-program as I never need to get access to it to switch it on or off.

But even auto-programs have their drawbacks; SafeMenu requires a CPX loaded, although I personally only require the MAC-type-menu-feature to be on all the time, and never alter the CPX settings. The CPX in turn requires X-control to be loaded, and all these requirements can make booting slower and waste floppy space on a disk-based system.

Can anyone explain whether it is possible EASILY to convert ACCs to Auto-programs and vice-versa? After all they are both terminate-and-stay-resident programs, with the difference that the ACCs have an access so they can be modified without rebooting.

What a pity someone doesn't write an ACC that combines
1) MAC-type-menu feature
2) auto-topping
3) a right-mouse-button double-click, and
4) the setting of the clipboard directory.

That would really be worthy of taking up an whole accessory slot!

:-)

If your desktop allows it (Magxdesk does, probably also Thing and all
the usual suspects) you could assign it to a function key so you just
press it to get your pointer back.

I have a similar thing set up for Guy Harrisons's SDTidyUp program which
gets your mouse back and also redraws the screen: useful if it's been
covered in garbage by whatever program misbehaved in the first place.
It's similar to MagiC's own Tidy Up command, but it does the mouse
recovery and redraw all in one operation.

That reminds me: some months back BC (= Before the Crash) I said I would find the little app that switches the pointer on again. I had lost it and couldn't remember its name. Well, now I have it again, it's called "Mouse_on.prg", 858 bytes, and there's no indication of its author or origin. It was for the ST; it works on the TT too (even under Magic and Thing). I could email a copy to anyone who wants it, as I am sure it is freeware -- unless someone knows otherwise.

Not to start a flame war here, but I setup my Quadra with a 100Mhz 604PPC card, and decided to play around with MagiC Mac a bit. I installed CAB 2.7 and IConnect. I wish everything was that easy. Enter the phone number and IP address and that was it. Connected right away. Now if there were only some shareware clients that would work with it:). CAB side by side with Netscape V3.04, is still slower, but much faster than on my Mighty Sonic Falcon:).

Me Too.

I have alot of Falcon Patches in my Falcon that came with it. I have no idea for what they are all for. They could be Calamus Patches, which I know one is as it boots Calamus to 256 Colours. The others that I have are possibly calamus , maybe something else, some bomb, so maybe they are looking for something?

I have lots of patches, but what they are for, who knows?

A listing of program names and patch descriptions would be great.

Later Brian.

500. NEWsie and QED

Newsgroup: comp.sys.atari.st
Date: 2000-01-08 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <QJxd4.652$kI3.354@198.235.216.4>
Source record: 67472

I am trying to set QED as I was told I needed to, in order to get proper
references in NEWsie and proper line length in the posts.

Can someone who uses this combination tell me how it is done.

Essentially, I want to have the references not autocarriage returned.
And I want the messages auto carriage returned.

If I understand things properly. The program I was using did this.
This program was Edit Plus.

But I believe Edit Plus has a 255 character limit, so that when the
references hit this max, it would be truncated, and then things get messed
up. I believe this is why I start losing posts and replies in long threads.

So I changed to QED and it seems to autocarriage return the references.

and this happens when 72columns is reached.

<referencenumbershereinthis
makebelievereference>

Which I think screws things up too.

Apparently I am told that QED will handle beyond the 255character limit?

I don't know if anything I am told is accurate.
I do know that I don't know anything about the subject.
I am looking for as much help as possible in this regard.

I seem to be having great difficulty with long threads.

I don't believe I am alone. I know it has been discussed in the past and
resolved.

Thanks in Advance

Brian.

501. Fast Club CD

Newsgroup: comp.sys.atari.st
Date: 2000-01-08 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <bKxd4.653$kl3.354@198.235.216.4>

Did anyone else purchase this CD?

I have and I'LL I can do is look at directories.
It doesn't allow me to copy to my hard drive.
It doesn't allow me to read the Readme files.

As soon as I click on a file I get an error message.

"outout device hasn't received any data"

or

output device is not responding

The CD light comes on as it attempts to read, then, the light goes out and
after a long period of time the error message occurs.

After 30 attempts I was able to copy a 1K file that had Fast Club
information.

1) A working email address. stclub@cix.co.uk

I hope its working:-)

2) A non working URL http://www.cix.co.uk/stclub/

Attached is the file.

Was this CD for Gemulator users only? Or am I misunderstanding the
below?

The following disks are not available on this CD:

AP.320 - missing
ED.122 - corrupted disk
EN.900 - odd disk format
EN.901 - odd disk format
EN.902 - odd disk format
EN.980 - odd disk format
EN.981 - odd disk format
WP.650 - corrupted disk

Odd disk formats are demo disks that would not work on Gemulator.
These disks can be ordered on 3.5" DSDD disks - see catalogue for prices.

Other missing disks will be added when we get new copies
of the master disks.

Comments and suggestions for improving this CD and the PD and
Shareware collection are very welcome. See our web site or phone
for a copy of our catalogue for details of new disks, CDs and
upgrades to Gemulator.

504. New User Newsie Questions

Newsgroup: comp.sys.atari.st
Date: 2000-01-08 00:00:00 UTC
From: taj16@dreamscape.com
Message-ID: <s7dhr8nboj8116@corp.supernews.com>
Source record: 67476

Since Delphi decided to drop dialup access via SprintNet/Tymnet, I've been forced to go to the Internet to stay online. Right now I'm trying to master the use of Newsie 0.94. I've been using email for over a week, and figured out getting and reading newsgroup articles earlier this week. (Thanks, Joe M., for your vital assistance in setting up STinG!)

This message serves two purposes. First, it's a test to see if I have Newsie's Offline posting procedure correct. Second, since it seemed such a waste to simply send a useless test post, I thought I'd ask a question.

Once I have newsgroup posting (and followup) down, I'd like to work on ftp setup. Could anybody give me some suggestions for some good ST ftp sites, and please, if possible, tell me the information I need to set them up in Newsie?

Any help I can get would be greatly appreciated.

TJ

> be difficult to get the cursor to enter the date field.
>
> The control panel I am using is titled Z-Control Beta

I have used Z-control prior to 31/12/99, but not after. X-control is what
I use currently, but it showed the date as 1/01/01 on Jan 1. I changed it
to 1/01/00 and since then its worked fine. Things like Calappt work fine
with system date etc...no problems yet (fingers crossed!)

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

Hi there,

Brian Van TIlborg wrote:
>
> How can one determine if it is a "Progressive JPG".

Try loading it into Netscape or Internet Explorer on a Mac
or PC. Watch it load carefully off a floppy, and you might get
time enough to see it load in 3 or so stages, just like an
interlaced GIF from the internet...

Many Mac/PC graphics programs should be able to tell you the
type of JPEG it is too, and even change the 'progression' if
you want to...

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

> ofcoz easier on your eyes since you dont have interlace mode.
See above. The only reason I see against VGA for demos is getting a
50Hz frequency on all monitors.
BTW does using 31250 Hz / 50 Hz / 25 MHz / 160x200 or 15625 Hz / 50 Hz
/ 25 MHz / 320x200 (Horizontal/Vertical/VIDEL frequencies / resolution)
take the same amount of machine time?

If you get a copy of IFusion, available from ASH with the FTP program Fiffi,
you will be able to use all the STiNG clients with this stack. Alternatively
you could install and setup STiNG itself (as you aren't using any other
IConnect clients). You can get STiNG info from http://sting.atari.org

1. Start qed and make sure that all windows are closed
2. Select menu option Options/Local... ([Alt][O])
3. Select *.txt from the submenu at the top (If that option is not
available, select edit, and enter "txt" into one of the boxes)
4. Make sure "Line formatting" is selected (in the right hand side of the
dialog box)
5. Also make sure that "while loading" and "while pasting" are not selected
(This will prevent QED from formatting the references while loading the
newsie file newstest.txt)
6. Enter the line length you want in the "line length" box
7. Select Options/Save setup ([Alt][W]) and quit qed

That should do it ;-)
Good luck,

Hi Artur!

I like you, only have a VGA monitor, but there are many more demos now
that do work on VGA, I would say that 90% was too high a figure.

I have a few demos on my website that work on VGA - an example is
Sonoluminesenz, which used to be only for RGB, but there is a patch
available that makes it work on VGA too.

Surf to http://www.users.zetnet.co.uk/jfhaslam/atari.htm and select the
Download Page link. I would also recommend Alive and the Breath demos,
also available there.

Cheers!

James

It's certainly not a demo restriction. I'm a registrated user of Positive
Image. Even on my Hades it's deadly slown. It's a pity because it holds
lost of usefull options.
Furthermore I can't handle VFAT partitions.

I have a number of TCB Tracker mods and a number of Quartet tunes. I don't want to setup my ST every time I want to listen to them, and the Emulators I've tried don't run Quartet or TCB Tracker properly.

So what I was wondering was, does anyone know of any Windows 98 players, or Winamp plugins which will allow me to listen to them?

TIA

Just a thought: have you tried installing the Linkweiler y2k patch in
case it's a problem with the XBIOS clock not being in sync with the
keyboard clock? Not sure if MSTEs are affected by this problem (could
just be the profram itself is iffy with y2k dates), but it's worth a
try. Patch and more info at address in sig.

Two problems:

1) The Forget-me-clock software isn't y2k compliant.

2) You'll have the XBIOS clock problem on an STE.

More info and patches available from address in sig below.

It's not a demo problem. I got it on a CD at the last Atari show in
Stafford and it is *hopeless*. Doesn't recognise the pallette properly
above 256 colours under MagiC-PC and you can make a cup of tea during
some redraws :-(

> for different systems?

The original Atari control panel was a simple accessory with just a few settings. This is way too restrictive, so they introduced Xcontrol, (eXtended/eXtendable control panel?). This uses modules (CPXs - Control Panel eXtensions) and seems to work pretty well on most machines/OSes.

All the other options are "improvements" on Xcontrol, some of which support extended CPXs (ECPXs, which can have bigger windows etc). I'm not sure which do and which don't, except that Zcontrol does support them (they're rare, though).

Zcontrol is apparently not y2k compliant, so forget it.

COPS takes a slightly different approach and relies on a multitasking OS for this (so forget vanilla TOS): you can use it like Xcontrol, or you can set it up to run, make the settings and quit after startup. You can also double-click a CPX directly from the desktop to run it if COPS is installed. Some people have had trouble with some versions of it, but I use 1.06 and it seems pretty stable to me. I suspect it's happier under MagiC than under MiNT.

The only other one I know of is the second version of the Freedom replacement file selector. I think this supports ECPXs too. This seemed to have a whole lot of its own troubles as it allegedly uses some dubious programming techniques to do its stuff and can render some systems unstable.

There may be others, but these are all I know of.

Boils down to a choice between Xcontrol and COPS, the latter only being an option if you have a multitasking OS.

524. Y2k fixes

Newsgroup: comp.sys.atari.st
Date: 2000-01-09 00:00:00 UTC
From: David <drifter@bigwig.net>
Message-ID: <Od3e4.2317$UL1.47518@nnrp4.clara.net>
Source record: 67296

I would like some advice on fixing the date/time problems post-Y2k on
my Atari STE.

I use the machine entirely for midi sequencing (Emagic Notator SL). Up
to now I have been setting the date/time in a program called "Financier",
quitting then loading Notator. Up to 31-12-99 this enabled me stamp
the correct time/date on my Notator files.

I have now discovered that, though it is possible to adjust the year to "00"
within Financier (and this is correctly applied to files saved from that prog),
the year reverts to "28" when quitting. Thus my Notator files are stamped
as **/**/28.

I've downloaded a couple of possible fixes ("clock238.lzh" and "zcontrl125.lzh")
onto my W98 PC and thence to the Atari via a 720k PC disk but I am
unclear what I'm supposed to do with them. Are these merely fixes for
programs I don't have?

Any suggestions as to what to do? I don't want anything that uses an
alternative OS (Notator requires TOS as far as I know).

David

Hi, It is the cracked one that is buggy, learn how to get around the
buggs and it will work alittle better. but my advise is to buy the
orginal. I'm atm also lookin for the original. but i haven't seen any
for a normal price of the day

>The patch for xboot is just a small hack that someone years ago wrote to
>help me out, it's a small program that patches xboot.

Many thanks - received and installed and works fine, though the
patched versions seems to have a slight side-effect: If you change
selections in any of the windows (add or delete) you are no longer
asked whether you want to save the changes or not, so you have to
remember to click on the disk icon to save them if you want to make
them permanent. Still, that's better than if they were saved
automatically, even if you only wanted to make a temporary change.

Also found my magxbo32.prg - the extra 'o' makes a lot of difference
when searching!

> XBoot
>Setting up the time and date can be done with other utilities. As for the
>creation of new sets, a possible solution is to edit the file set.dat in
>an editor.

Actually it isn't really necessary, as the sets work even if they have
an incorrect year-date.

But I had another problem which was (indirectly) caused by Xboot, which
may be of interest to others: I originally installed NVDI 5 on the
Falcon with MagiC 6 and all worked OK. I then copied most of my files
from the ST's external HD to the Falcon's internal IDE. Suddenly I found
that I couldn't print from GDOS - which showed itself in IdeaList. After
a couple of hours checking and reinstalling NVDI 5 it still didn't work,
but eventually the printer.cpx showed that only the IMG and Metafile
drivers were installed - no printers!

After many hours experimentation I finally found the culprit: An
incorrect ASSIGN.SYS. The names of the printer drivers have been altered
in NVDI 5 from 21 PAGEPRN.SYS and 22 PINPRN.SYS of earlier versions to
21 PCL.SYS and 25 PIN.SYS respectively. I was using Xboot for renaming
several different XXX.SYS sets to ASSIGN.SYS and had copied over those I
had set up for NVDI 4, which of course used the old nomenclature.

I have now solved it by setting up different *.SYS files with 4 and 5 in the names, which XBoot renames to ASSIGN.SYS as required when I am using NVDI 4 or 5. I also renamed the NVDI GEMSYS folder to GEMSYS5 and set up another GEMSYS4 with the respective drivers and bitmap fonts in it. This now works fine. I don't think I'll keep the NVDI 4 setup, but I will use similar tactics to allow use of NVDI 3, as this is less fussy with font checking and will load some TTFs that NVDI 4/5 balk at.

Hope this may help someone else with similar strange problems.

Regards, /Peter/

Brian, your double posting I guess can make up for mine not showing
up:).
I setup the dreadful Mac to see if I could get away from NNTP problems
I "thought" were NEWSie related, but the Mac has the same problem
under Netscrape and Newswatcher. It's the weird the way my ISP has setup
his NNTP server, or lack of. He subscribes to Supernews, and request
are relayed back and fourth somehow. That is about as technical as
I can get on the subject.....:)
I've decided on switching back to Ridgenet, the Microsoft of our
town..... I really hate those people:).

From: george@moulder77.freeserve.co.uk
Message-ID: <85arlr$8gq$1@newsg4.svr.pol.co.uk>
Source record: 67301

On 9 Jan 2000 06:23:50 G, Mario Becroft wrote in reply to
George Moulder's original posting:

GM: One of the most annoying things about the Atari is the six-only
GM: accessory slots.

MB>Use a newer operating system which supports more than 6 desk accessories.
MB>Alternatively there used to be a program called Multidesk which enabled
MB>more than 6 desk accessories to be loaded. Another program called
MB>Chameleon enabled various desk accessories to be loaded but only one at
MB>a time.

As I don't want to go to a newer operating system, and Chameleon
(what an excellent program this is, too) doesn't increase the
NUMBER of accessories that can be loaded, it looks as though
Multidesk is the only other option left available to me, and
hopefully it may work better than NewStuffer. Can you (or
anybody else) advise me where copies can be obtained?

GM: Can anyone explain whether it is possible EASILY to convert ACCs to
GM: Auto-programs and vice-versa? After all they are both terminate-and
GM: -stay-resident programs, with the difference that the ACCs have an
GM: access so they can be modified without rebooting.

MB>Desk accessories are not terminate and stay resident programs and
MB>converting one to the other is generally non-trivial, even if you have
MB>the source code to the program. Many programs that are TSRs could not
MB>be implemented as a desk accessory and vice versa.

I should like amplification of this. By the very way they act,
both ACCs and auto-programs seem to my mind to be there
lurking in the background ready to operate without a further
call, ie they are TSRs. To take an example, both SafeMenu and
Pulldown, once loaded, control the manner in which the menus
drop down. One is a auto-program, the other an ACC. Is my
concept of a TSR erroneous, and if so can you describe simply
the difference between ACCs and auto-programs?

My thanks also to Lonny Pursell and John Logan for replying to
my original posting. The points they offered are, I think,
covered in this follow-up to Mario Becroft.

My CD player skips and jumps with your last album. The sound
quality sucks. What could be the problem? Is the bootleg
version not as good? Would I have to buy the original?

>This brings me to another point: why isn't all the music software for
>which service has been discontinued (?) a long time ago not declared
>freeware?

Why isn't all the music which the artists have stopped performing
declared freeware?

Cubase is powerful, it works, is stable, and is still being
used (and bought new) to kit out professional studios. The
fact it's no longer supported in terms of further development
doesn't mean it doesn't cost anything to manufacture and
distribute, or that the publisher (which still exists) doesn't
have the right to charge for it. After all, if you're a real
professional, these things are pocket money, and if you don't
think it's worth it, don't buy it. What's wrong with that?

Perhaps you should call Steinberg with your suggestion, maybe
they'll think it's a great idea. Take a reality check.

>I've had an MSX for quite a long time, and many software
>developers have declared their old software freeware. So that people

That just about sums up your average Atari musician these days.
Want it all for nothing. I'm sure you'd be using a pirate
version of the TT, if there was such a thing.

>depacking or packing JPEG's. That's where the coprocessor comes in..the 68882
>does a nice job with JPG's but is also used for various functions like
>filtering, calculating vectors, ...etc

The FPU (in the case of a 68881/2) is really quite useless for image
filtering. It's far too slow, and the data tends to be in integer format,
anyway. You also wouldn't want to use it for JPEG decoding (but a good
FPU (possibly the one in the '040) can actually help there).

The DSP on the other hand can do some blazingly fast filtering (that's
what DSP's are for, mainly), but you'd have to try a good implementation
to see that.
MGIF can use the DSP for 3x3 and 5x5 convolution filters (and median
filtering) and, IIRC, it's at least ten times faster than doing the same
job with the '030 (an '060 machine might come close using the CPU).

>With a graphic card the picture is build in the cards memory, and the cards
>processor will display the pic lightning fast...

Not really. The cards are normally on the same bus (at some point) as the
memory and the accesses are at best as fast as to memory.
Running in a 16/24/32 bit mode is quite helpful, though, since you don't
need to do any dithering (though you really should in 16 bit).

>but then it's all up to the processor and the slow memory... Try scrolling
>or zooming a 1600x1200 image, you'll now what a mean...

Yes, a hardware accelerated graphics card certainly helps with that...

>The ideal combination would be a Falcon with Graphic Card I guess :-)

>onto my W98 PC and thence to the Atari via a 720k PC disk but I am
>unclear what I'm supposed to do with them. Are these merely fixes for
>programs I don't have?

Both clocky and zcontrol *are not* fixes. Older versions of these programs
had the Y2K bug and that has been fixed, that's all, nothing more nothing
less.
However the alfa version of Clocky 2.50 contains an XBIOS fix

quote

New: freshest, untested, undocumented, unconfigurable alpha version of new
Clocky 2.50. This Clocky includes Y2K fix for your XBIOS and displays the
New Year 2000 correctly.
ftp://ftp.sophics.cz/pub/joy/clck250a.lzh

unquote

On the Belgian ftp-server you can find two y2k patches. If they work I
don't know as I don't have that problem myself

/utilities/y2k_patch:
-rw-r--r-- 1 ftp 7401 Jan 5 20:37 y2k_fix.lzh
-rw-r--r-- 1 ftp 988 Jan 5 20:37 y2k_fix.upl
-rw-r--r-- 1 ftp 9610 Jan 5 20:37 y2kpatch.lzh

Remember y2kpatch needs trapper to work

./utilities:
-rw-r--r-- 1 ftp 12057 Jan 5 20:38 trappr14.lzh

y2k_fix comes with a English manual
y2kpatch and trapper is German only.

For the right URL of the ftp-server see my signature.

Right. And in case you own a registered copy and want more
you can still upgrade to the mac/pc platform almost for free.
What else do you want?

You can install the mouse on prog in one of Thing's quick program slots and
activate it with the assigned function key, but that does mean that you
have to top Thing first. Appline will help in this respect.

Suggest using sysinfo instead - could be a nice InterActive project, if no-
one else is working on a translation! :-)

:-) Well, I do recall that dropping a text file onto Everest would result in two windows being opened with a copy of the file in each - that doesn't happen with jinnee.

It's not possible as Auto programs aren't GEMmed. For Auto programs to be configurable from GEM they need to be controlled by either an accessory or by a CPX. CPXs are better as they can be set to be non-resident, ie they execute at bootup, make the settings to the TSR bit run from the Auto folder and unload. Accessories are the "old" (pre-Xcontrol) solution, or used where CPX restrictions (eg window size) would make it difficult to program.

FWIW, the 6-slot limit has been tackled under the multitasking OSes. MultiTOS doesn't have a limit to the number of ACCs as far as I know, while MagiC retains the limit but encourages the use of the Start folder (not sure what Geneva does about this). This is similar to the Auto folder, but the programs are (or can be) GEM programs. Under TOS I used to use a lot of ACCs, whereas under MagiC I only use ST-Guide and COPS (both of which could be run as programs but I prefer them as ACCs). All the other stuff either runs from the Auto folder, CPXs or the Start folder.

> What a pity someone doesn't write an ACC that combines
> 1) MAC-type-menu feature
> 2) auto-topping
> 3) a right-mouse-button double-click, and
> 4) the setting of the clipboard directory.
>
> That would really be worthy of taking up an whole accessory slot!

Trouble is that so much of it can be done with existing stuff it's unlikely anyone will, though I would be happy to be proved wrong.

1) Is available under MagiC from settings in MAGX.INF (though this setting isn't particularly friendly to set up - best to use a configuration utility if you want it). Not much use if you are using TOS or MultiTOS, I'll admit.

3) Is available from some desktops already (eg Thing). Within programs (as opposed to the desktop) this could be a problem if the right button is used for something (eg CAB). And of course Thing will eat much more

RAM than an accessory.

4) This is just an environment variable: you can set it from MAGX.INF under MagiC, GEM.CNF under MultiTOS, or the Clipboard CPX or Environment CPX under TOS.

None of the above require ACC slots, you'll notice (if you are already running Xcontrol in the case of 4).

I'm not suggesting that much of the above is of direct use if you are running a floppy-based low-memory ST with single TOS, but merely giving an example of why it's unlikely that a new program would be written to cover those areas as they are mostly tackled in other ways now.

>English resource file for it. It has an option for a transfer program.
>
>I would like to be able to do transfers while using a telnet session. What
>kind of a transfer program does Telli use? Does it support Zmodem?
No, although the option can be selected in the dialogbox, it is unfortunately
not implemented yet. The programmer has promised to get it going in the next
version.
Teli will use any transfer program you like, just make sure it can work in
multitasking and recognise HSMOD drivers. The protocol may be anything you
like, so Zmodem is just fine.

>Is there an English doc file for the demo?
No, but there might be one in future... these things take time... and that is
one of the things that Derryck and me are short of ;-)

Cheers from Belgium

What a title for a demo. Anyways, John, I got this demo off your site and I
was just wondering? Does this Demo just stop moving the graphics and only
play music after about 7 minutes?

It is pretty cool demo.

Basically the Screen stops displaying different graphics and such, but the
music continues on for quite sometime, in fact I have never waited for it
to end.

Hi Jerry,

as long as you use the standard ROM-TOS you can only use the standard pixelsize of 8*16 pixel per character for the AES system.

If you like non-monospaced font e.g. an Arial.TTF ;-) you can copy it from a windows machine into your NVDI folder and then, if you use NAES2, you can have Arial as your systemfont for the menues a so on..

In former times I had a lot of 8*16 fonts for the ST, but now they are all deleted :-(

I did try to look up the Mermaid Group, but with no luck. They are not on the
above address, and the phone number now belong to a young couple.

I belive that the Mermaid Group don`t exist anymore.

Doing a search on http://www.krak.dk did show one person with the name of
Hasse Wehner.
He has no email address that I know of. But his new address is:

Hasse Wehner
Boegevej 8
DK - 4040 Jyllinge

phone: +45 46 73 10 80

A search for the name Gert Groenning shows 3 different persons with that name.
Don`t know who to look for, they live far apart, and not at all close to
Aarhus, where they use to be. Risskov is sort of suburb to Aarhus.

cheers

Joergen

Indeed PixArt 4 is very stable. On my Hades running freeMiNT/N_AES PixArt feels quite happy.
PixArt 5 however is another piece of cake. That version is not stable at all for the moment, however I must say the version I've is a pre-release version and beeing so it holds probably lots of bugs.

The only know by me graphics package (apart from Positive Image 2) that's slow is Papillon. It's stable but no very fast. Furthermore it needs NVDI 5. Wdialog is not a must but recommended.

I become concerned when any Hades owner says a program is slow. Where does
that leave all of us using slower computers?

Too Bad about Positive Image. The manuals is a good read at least.

Brian.

Good, I hope you have figured out how to expand and contract the Newsgroup threads with the + and - Key or you may not see this until you start deleting your original post:-).

So welcome aboard.

>This message serves two purposes. First, it's a test to see if I have

>waste to simply send a useless test post, I thought I'd ask a question.

So far so good.

Shoot!

>Once I have newsgroup posting (and followup) down, I'd like to work on ftp
>setup. Could anybody give me some suggestions for some good ST ftp sites,
>and please, if possible, tell me the information I need to set them up in
>Newsie?

To use NEWsies FTP.

An Example

1) FTP pull down Menu
1a) "Select Server"
Should be a short list of servers that come with NEWsie.
Such as

ftp.primenet.com

Highlight this by clicking once.

2) "Edit Server" from pull down Menu.

Should see...

2a)Server:ftp.primenet.com
2b)Logon: anonymous
2c)Password: youremailadress@here.com

Now you are done. If you double click on the ftp site you want in the Server Window with the list of ftp sites , you will be on your way.

3) "Add Server"

Same as above except you write in the NEW Server address you have found.

At http://www.umich.edu/~archive/atari
Hallvard Tangeraas has an article on using ftp. It is worth reading.
Should be in the networking/internet section.

I also recommend you go to

http://www.geocities.com/SiliconValley/Bay/8745

Here you can find a list of FTP sites and some good files to be downloaded via ftp. If you type the URL in NEWsie, this site is NEWsie friendly. If you go to the preference window and turn "Autobuffers" on, then you should be able to double click on the above URL and go directly to the site via NEWsie.

The little ftp site is either ftp.sn.no or ftp.sol.no I can't remember, but one works with NEWsie and one doesn't and there are some must have utilities that Halvards put there.

You should be able to double click on the ftp site from the webpage in this case and NEWsies FTP functions will take over.

That http site, is possible the best when just getting started on the net and looking for Atari stuff. Well organised and Quick. I don't know how current the links are anymore as I don't know how much effort is still being put into maintaining the pages, but I was there last month and it still looked like it was being maintained.

Here is a good ftp site to add to your list.

193.190.204.128 or you can type in
chapelie.rma.ac.be
if you prefer.

This is the Belgian Ftp site.

Unless otherwise stated most ftp sites operate with anonymous and emailaddress as password and logon. Again the ftp article covers this very well.

The Umich http archives are huge.

If you need to see what is happening with ftp, I suggest you OPEN the LOG window. Here you will see the activity of the FTP server and list of commands and such and it will give you more information. This LOG file is also written to disk. ONLY ONCE, and then it overwrites itself each time you start NEWsie. So if you want to look at your LOG file after you have exited NEWsie, don't restart NEWsie because that log file, the one written to disk with your last session, will be overwritten with the next session.

I hope I haven't left anything out.

Brian.

Guido,
I believe the SAM 1.3 package I have came with a samconfig.acc which,
once configured is'nt needed to run SAM and load sounds. It also came with
a CPX which never showed as accessable when loaded. I use neither now
(only SAM prg. in the auto folder). Again, once it's configured with the acc.

: know Pulldown has a mouse accelerator but nearly every utility seems
: to have one, and they all conflict so are rarely used).

Use a newer operating system which supports more than 6 desk accessories. Alternatively there used to be a program called Multidesk which enabled more than 6 desk accessories to be loaded. Another program called Chameleon enabled various desk accessories to be loaded but only one at a time.

: Can anyone explain whether it is possible EASILY to convert ACCs to
: Auto-programs and vice-versa? After all they are both terminate-and
: -stay-resident programs, with the difference that the ACCs have an
: access so they can be modified without rebooting.

Desk accessories are not terminate and stay resident programs and converting one to the other is generally non-trivial, even if you have the source code to the program. Many programs that are TSRs could not be implemented as a desk accessory and vice versa.

On my TT030 Papillon is just usable. It puts the graphics reasonable fast
on screen but the reactions of the tools is IMHO too slow. Sometimes the
mouse movement is quicker then the output on screen.
Maybe this is caused by the fact I'm using N_AES and not Magic. Papillon
comes also from ASH.
Compared with Positive Image however Papillon runs like a HST.
The latest Papillon version 3.01 works much faster then for instance
Papillon 2.53 but as said earlier it needs NVDI 5. Without NVDI 5 it just
won't work.

If you are limited to 6 ACC slots you must be using single-tasking
TOS I assume. With the newer multi-tasking OS's the limit of 6 is
removed and you can also load/unload them on the fly without some
hack like MultiDesk.

Chameleon expands the slots AFAIR or perhaps allows swapping on the
hoof. Was pd but not freely distributable.

569. Cubase on TT crashes... 'illegal'...

Newsgroup: comp.sys.atari.st
Date: 2000-01-09 00:00:00 UTC
From: Kasper Souren <guaka@industree.org>
Message-ID: <85a6op$51v$1@odysseus.uci.kun.nl>
Source record: 67440

Hi,

My TT sometimes crashes with Cubase. A minute ago it did it again.
But the strange thing is, that the music is playing on! Until restarting
Cubase. Than the TT is gone...
What could be the problem? Is the hacked version buggy? Would I
have to buy the original?
This brings me to another point: why isn't all the music software for
which service has been discontinued (?) a long time ago not declared
freeware?
I've had an MSX for quite a long time, and many software
developers have declared their old software freeware. So that people
still using MSX don't have to feel guilty copying stuff nobody gives a
fuck about.

greetz,
Kasper

570. Y2K_FIX.Yes/NO?

Newsgroup: comp.sys.atari.st
Date: 2000-01-09 00:00:00 UTC
From: db361@torfree.net
Message-ID: <Fo2r68.7n1.0.bloor@torfree.net>
Source record: 67441

One of these days we'll get it. I hope. On the advice of several helful people on this NG I went to Whalley's site and downloaded the y2k_fix.prg.

Put it in my AUTO folder and presto! My ICD real-time clock (in my AdSCSI board which makes my 1040STe accessible to a Quantum 540) used to think it was 1990 instead of 00. NOW it says 10. 10? BTW I haven't yet checked to see if it wants the new files to be 1910 or 2010. I'll update later today once I've fiddled with the system some more.

At least the software patch is capable of over-riding the ICD clock.

PLEASE NOTE that, incidentally, for those of you who were faithful readers of XEST fanzine, it's not dead yet. I have been downloading these various comments about the y2k bug and once edited, they'll be a filler article for XEST. I have NOT yet begun to do the page layout (in CalamusSL/95, as always), so (a) those of you responding to this ongoing situation, use your most florid writing style if you choose, and (b) if you want your name witheld from the article, email me <ag352@chebucto.ns.ca> and I'll delete your particulars from the cumulative text file. Heck, it's only 50 to 60 copies, anyway.

Sincerely,

John S. Gray

You are almost right.
ACC's do not terminate, because they cannot stop listening to the touching
on their menu entry. They also are GEM programs, otherwise they couldnt do
that. ACC's that do not register themselves into the menu are sort of cheating.

Like TSR's though, they can hook a subroutine into some vector.

It may not be realistic to you or handy at the time. However, my findings
are that while sometimes the data is maintained on 1.44 formated to 720,
often it is not. Directories are often lost or unreadable.

You can do it, but I would not trust the data that is stored. So while DSDD
are not that easy to find, and often not cheaper, if you want to secure
your data on floppies, the DSDD is still the best way to go in the long run.

Hi Mike. While I too thought I was dealing with NEWsie problems I have come across an number of things while trying to track down a Spammer. Apparently many of the NEWs servers Y2K patches to their software have been using different techniques to set dates and such. What is happening is that depending on how the server is sorting the dates the messages are getting lost. And it has been since the NEW Year that many people have ran into lost, missing posts, and such and they weren't just NEWsie users but people from all sorts of NG.

Since I know nothing of NEWSERVERS software and such, I can't back up my findings with my knowledge. So I got this information off the bCandid.com Newserver. I didn't read it in detail, because I was looking to do something else at the time. But I started laughing when I did, as I have lost more posts in the last Month than ever before. However my posts are appearing to a handful of people and they are Always on Deja News.

So at least I have finally converted to QED properly and can monitor the situation knowing that I have done what I am supposed to do at my end.
I only wonder how many circles John R. has travelled while I have been chasing my tail, possibly giving him wrong info. Probably already has me in the kill file:-).

However a few problems I did have are real, and the result of both operator error and incorrect set-ups.

I hope you don't see this post twice.
I hope you don't see this post twice.

>town..... I really hate those people:).

Actually, I was wondering if you ever downloaded messages under both setups
and compared data downloaded and such. Especially when you know you have
ran into problems with one software.

I have been going to various NG, and then editing the .grp file in order to
change to posted messages back, in NEWsie to try something over again.

And as I was just having problems, I was above to try another NEWSREADER on
the Atari just to compare what was happening, and if it was Atari Software
or NEWserver related.

I still am not certain but I think I am much closer than I was a week or so
ago.

Later Brian.

581. Wanted to Swap: Falcon in exchange for a Sega Saturn with Games

Newsgroup: comp.sys.atari.st
Date: 2000-01-10 00:00:00 UTC
From: Steve Stupple <Steve@atari.org>
Message-ID: <ncJvIAAjvVe4Ewdh@steverosie.demon.co.uk>
Source record: 67327
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi

Well I've after someone that wants to part with their Falcon, and swap
it for a Sega Saturn.

The Saturn comes with 2 control pads plus the following games:

Virtua Fighter 2
Clockwork Knight
Wipeout
Daytona USA
Virtua Cop 2
Highway 2000
Daytona USA
Loaded
Panza Dragoon
Sega Rally
Alien Trilogy
Manx TT Superbike
Sega Ages Compilation: Afterburner II, Space harrier & Outrun

There we have it. This is UK machine and am looking for a deal in the UK
only.

Please use the following email address: atari@euphony.net or
atari@lineone.net

IIRC you need only 2 cpx programs active (for normal modem connection), all
3 makes your system crash. Sorry, I can't remember, whitch one to disable
:-/ Please test it your self.

Also; run dialer as .prg, not as .acc program. At least it hanged my system
earlier ...

It depends on what you find strangely:-)
>
>I guess it follows the time format of the Macintosh side as I have the
>24 hour format there, but for some strange reason, Zcontrol omits all
>the "0" numbers. When displaying the time "01:04:56" it shows it as
>"1:4.56".

Yes, Zcontrol displays it so, but what's wrong with that?
Anyway if you click on the time of date field you will get the time
editing window. Strange enough zcontrol displays the time in that window
with the '0'.
I also noticed that when I accessed for the first time this day zcontrol I
got very short (fraction of a sec) the time displayed like you wish to see
it. There after the time was displayed without the '0'

Hi

I'm after an external SCSI CD-ROM drive with either a link 97, link II
etc.. for use with an Atari ST.

Ideally I would like them together, but will be interested to buy
separately.

If you respond via email, please use the following as my main one is
down:(

585. Re: Positive Image V.2

Newsgroup: comp.sys.atari.st
Date: 2000-01-10 00:00:00 UTC
From: Bob King <robert.king@patent.gov.uk>
Message-ID: <3879B778.9FBAE15D@patent.gov.uk>
Source record: 67331

I have both PhotoLine 2.3 and Positive Image 2. Even if you take the
difference in price into account, the difference in speed is
disapointing, I agree however on the good quality of the Manual. On the
other hand the PhotoLine Manual has a lot of content, but is very badly
put to-gether (TimeWorks on a bad day) and the quality of the 'filter'
example pix is a terrible. IMHO PhotoLine is the only Image manipulation
package worthy of the name on the Atari platform and runs faultlessly
from ST to Milan. It almost a feature for feature copy for an early
version of Photoshop. Try:

http://www.magma.ca/~nima/html/grafx/photolin.htm#download

to see what you are missing.

Also have a look at 'Vision', very pretty, but fast and stable as well.

Bob king.

Henk Robbers <H.Robbers@cable.A2000.nl> writes:
> Like TSR's though, they can hook a subroutine into some vector.

Though this is discouraged, as it almost always cause crashes on
resolution changes, which accessories can't detect themselves. They're
silently terminated, the vector(s) still pointing to memory which is
unlikely to keep the correct contents during the following
re-initialization of the AES.

Furthermore, upon being re-loaded, the accessory would have to take care
of such orphaned vectors, which is not easy and even not always
possible.

Ciao

Thomas

There's a North American version of Xcontrol 1.31 that shows the date in Month/Day/Year. It should be available on the net somewhere. It's also on Delphi. I use Cops 1.8 at the moment.

E-mail me if you can't find it; I still have it on my computer.

I have this CPX, and it doesn't make any difference to XControl. It
always displays Day/Month/Year no matter what you have dateform set
to.

XControl 1.31 is the version I have. On my Falcon, it doesn't want to change to anything but Day/Month/Year. Like I said, I hadn't noticed this until this month. Maybe it's some strange Y2K thing that XControl can't handle? I have had problems with crashes, display problems, and such with ZControl, Cops, and Freedom under Geneva, which is why I use XControl still. This is a minor problem I can live with, but I just thought it was strange and should be added to the list of Y2K glitches to be aware of.

No, you toggle between O/S's using a hot key. Both O/S's can be tasked
at the same time. The thought of running TOS in a MS Windows window
sickens me:).

Correction. Zcontrol *had* y2k problems but this has been solve with the
release of a new version.
You can find it on the Belgian ftp-site
ftp://chapelie.rma.ac.be/atari/utilities/cpx/zcntrl125.lzh

I don't know if the memory protection problem is solved too. I haven't
tested it yet.

You can't blame Thing for that. The only one who is to blame is you
because it's very lickely you've made a configuration fault.
With Jinnee for instance I had also problems to display files. I can't
remember me the details (I'm not using Jinnee anymore) but I remember me
that at the beginning whenever I clicked on a .txt file both Everest and
1STguide came up. Needless to say I had made a fault somewhere.

Take it easy big guy... take a deep breath and count to ten. If you get so upset over such petty things, I'd hate to see you when something substantial comes along. Benjamin Smith is offering a service to a dwindling community - and who knows, maybe his free monitor deal is helpful to a couple of us.

Just because *you* don't like something doesn't mean it should be bagged. Try thinking of others once in a while instead of just yourself.

598. atari.org problems

Newsgroup: comp.sys.atari.st
Date: 2000-01-10 00:00:00 UTC
From: nameerf@flash.net
Message-ID: <8pqe4.263$ro4.19702@news.flash.net>
Source record: 67344

I don't know if my original post ever made it here, since I haven't seen it, so I'll try again...

For a while now, I haven't been able to access many of atari.org's subdomains. I went to their page that was suggested in a news item about the subject, but when I enter subdomain I need the actual URL for and submit it, CAB gives me a "Transaction Failed" message. I haven't been able to find an E-mail address to contact them about it, so hopefully someone can help here. What's been the problem at atari.org recently? Is there any way they can set up a page directly listing the subdomains and their actual URL's? Or is this too huge to do? Until something gets fixed, I'm locked out of most of the subdomains running through atari.org, therefore many of the best Atari pages on the 'net. Any suggestions?

Doesn't winamp have MOD plugin as standard ?

You didn't specify if your STE has a cartridge clock, so I'm assuming it
doesn't and you are setting the time each time you boot it up (which is
a pain). Why not set it with the good old XControl.ACC ?? Zcontrol
should be able to do it too.

These are ACCs, which must be put in the root directory of your boot
disk, and show up in the Desktop menu.

Ouch! It sounds like you really are a newbie! LZH files are compressed
archive files, like ZIP files.

You need LHARCENG.TTP to uncompress them, available on all FTP sites.
Once uncompressed, you'll end up with PRG or ACC files.

There are several versions. The version you have uses the European date
format DD/MM/YY, not the US format which is the wrong way round (at
least from our european point of view) MM/DD/YY.

Not that the international ISO standard date format is neither of these
and is YYYY-MM-DD, which is perfect as it makes sorting dates much
easier, and allows 4 number dates. The problem is, yet again, getting
people to follow an international standard. A bit like the A4/US Letter
battle.

Actually, I don't see any technical reason these should need to run as ACCs at all. AUTO programs would be enough. Actually, I'm pretty sure I've already seen progs that do this, although I can't remember the names. There are also CPXs that will do the job.

Of course!!! Not only is this illegal, but the cracked versions are all
very buggy.

> This brings me to another point: why isn't all the music software for
> which service has been discontinued (?) a long time ago not declared
> freeware?

Try convincing Steinberg, but don't get your hopes up too high, others
have tried before you. Why would they do it ? What would they actually
gain from it ?

> I've had an MSX for quite a long time, and many software

> fuck about.

Actually I doubt that. Most authors of obsolete software haven't said
anything, and people have "assumed" that it's ok to copy it, which is
legally wrong.

Here's an odd Y2K glitch:

In Cadenza Software's "Atari Personal Organizer", the date is displayed in the Diary Entry section as 9 January 2:00 instead of 9 January 2000. When I click on the box to change the date, I can only change it up to 1999. I guess that one's a goner?

Also, I hadn't took much notice before, but does XControl always put the date in Day/Month/Year (i.e. 09/01/00 for January 9th) instead of Month/Day/Year? I freaked out when I opened it up and thought the computer believed it was September 1st! Anyway, I can't change it to anything else, so... Maybe I'll try the new ZControl.

I already knew that, but I had no idea what the command codes were.

>> My ultimate goal is dumping the IKBD ROM, to test a (free, not finished)
>> Atari ST emulator. Well, it may sound silly, but my primary goal is
>> emulation accuracy, not efficiency, so I think emulating the HD6301 is a
>> good idea.
> Well, keep us informed about your progress !

Great news : thanks to the two replies I got, I now have a valid IKBD ROM dump.

I have implemented much of the IKBD/ACIA interface, but the ST still
freezes at startup (waits for some data the IKBD never sends). When I
disable the IKBD, the computer boots up and displays the desktop
completely.

The emulator is being written with another guy as a part of the MESS
project (<http://mess.emuverse.com/>), whose goal is emulating and
documenting as many computers/consoles as possible. It is based on MAME,
which emulates arcades, with similar goals.

The other guy wrote the basic memory map and is currently working on the
floppy disk controller, I think. I wrote a cycle-level video emulator
(yes, cycle-level - it will probably be slower than frame-level or
line-level emulator, but this should allow Spectrum 512 or GFA Raytrace to
work, hopefully), and I am trying to make the IKBD work, so that we can
get something vaguely functional. Then, we will still need to complete
MFP emulation and other details.

Unfortunately, on my 180MHz 603e, I am under 10% of an original ST speed.
We may be able to optimize many things, but it is obvious the emulator
will require a fast CPU.

regards,

Raphael Nabet

Completely off-topic, but I recall having this conversation
several times with American Atari developpers on IRC.

When standards are concerned (A4 vs US-Letter, GSM vs PCS, etc.)
there is no point in trying to convince them: if the place where
the standard was ratified is outside USA, they won't consider it,
even if it comes from an _international_ organization. Anyhow,
American standards are oh-so-much-better than anything the whole
planet could come up with... Right.

You're right, of course. I just think that it's premature to decide
that every person who violates some entrenched protocol is automatically
an idiot. The use of HTML and grahics in newsgroups is becoming more
and more acceptable. For some people, that will be a problem as you
note. Unfortunately, time marches on and many taboos fall to the wayside.

BTW, for what it's worth, I've been in contact with some of the upper echelon at Terminator. It seems the university wants to remove as many non-student/faculty from their systems as possible. There is some hope that one or two interested archivists will be permitted to maintain an account, but that hasn't been formally approved yet...so at this point I'm flying a holding pattern until I hear from them as to their plans and requirements.

I'm certain that the archives themselves won't be deleted, although I may be wrong about that. Just that there's a concerted desire on the administrators' parts to get the whole thing coded into HTML pages and forever eliminate FTP and e-mail access...basically, eliminate the need for shell access.

I'll make a point of posting whatever news I get whenever I get it. Here's hoping that the whole of Atari Archive doesn't just disappear over the horizon. I'm sure there are many good sites that support Atari users these days, but there's something magical about the extended timeline of the old archive. To my knowledge, that archive was originally started before the Tramiels bought Atari from Warner Brothers, although I may be wrong about that. Certainly much of the 8-bit software that's stored there was programmed before the Tramiels fumbled the ball.

I doubt if these will do what you want. You need an XBIOS patch (I'd currently recommend the Linkweiler patch) and some means of setting the date and time which lets you set 2000+ years (fixed Zcontrol will probably do, or use the clock.CPX with it or with Xcontrol).

More information, links and patches on my y2k page (address in signature below).

BTW, to unpack LZH files you need LHArc. Have a look on one of the main FTP sites (eg ftp://ftp.funet.fi, ftp://chapelie.rma.ac.be) to see if you can find it in self-extracting form (because you can't unpack a non-slef extracting archive of it without the relevant unpacker already being available). Try looking for something called LHARCXXX.TOS, probably in a utilities folder.

Possibly you have a European Xcontrol (it's showing European date
format).

Hmm. Sounds like the actual hardware ICD clock is having trouble
storing the 2000 year or possibly the software that reads it isn't
interpreting it properly.

Have you tried using the clock patch available at my site? It's intended
for cartridge clock but it doesn't do anything cartridge-specific and is
intended to work around difficulties similar to yours.

Set your ICD clock to 1980, then in the auto folder put the Linkweiler
patch and the clock patch in the following order:

ICD program which reads the RTC (sets time correctly and year to 1980)
Linkweiler patch (fixes XBIOS problem)
Clock patch (adds 20 years to date, so sets it to 2000 - this only works
reliably and fully if the XBIOS problem is fixed, so you *must* run it
after the Linkweiler patch)

> Well ? ....

Depends what you want to do with it. I use MagiC-PC, info on others
gleaned from reading posts here.

For games, verdict seems to be to use PaCifiST.

For apps, choose between:

MagiC-PC - MagiC OS (though can use TOS for compatibility if necessary),
use with NVDI-PC or NVDI5 to get fast screen updates and
high/true-colour resolutions. Commercial and expensive. Demo limited.

GEMulator - can use TOS or MagiC, PIA to set up judging from posts here.
Latest version commercial, older version available for free.

TOSbox - shareware, has good reputation.

> legally wrong.

Well, I know that in the MSX community there were people who have
succeeded in this, more or less. Some companies declared their products
freeware, some public domain. Others have allowed the last MSX magazine
(MSX Computer Club Magazine, in Dutch) to have their software - even
cracked versions - on one of the CD's that came with the last issue.
Even Konami did that, the creators of Solid Snake (yes.. the big PSX hit).

But maybe MSX is 'way more dead' than Atari...

greetz,
Kasper

>
>Ashley

I know what you are saying, and I'm seriously thinking of doing the same
on the email unless something can be done to prevent the service going
down! I don't mind sticking some money in their kity.

As far as I know none of my email addresses: steve, asx & lastpd
.atari.org doesn't work.

On the URL redirects, asx.atari.org seems to work; although last-
pd.atari.org doesn't!

While I'm about it you can use the following details in replacements for
the above:

steve@atari.org = atari@lineone.net
atari@euphony.net
asx@atari.org = steve@the-asx.co.uk
lastpd.org = steve@last-pd.co.uk

Web sites:

asx.atari.org = www.the-asx.co.uk
last-pd.atari.org = www.last-pd.co.uk

my old URL is still active at www.steverosie.demon.co.uk

This was my "fix" as well. I had all sorts of unusual problems with
the port set to 115K that magically went away with the serial port set
to 56K. It's nice and stable now. I guess the Falcon's serial port is
only a 56K port. Anyone care to comment on this?

634. Junior Office Y2K bug

Newsgroup: comp.sys.atari.st
Date: 2000-01-11 00:00:00 UTC
From: mb@gem.win.co.nz
Message-ID: <Fo6yGo.7z@gem.win.co.nz>
Source record: 67254

A member of our local computer club is noticing a problem with the Junior Office fax software. The software will not send faxes in the year 2000, because in the outgoing fax information it displays the date as 19100, and then complains of an invalid date format.

Does anyone know of a way to avoid this problem? I have heard of a bug in some C library time functions that outputs the date in this incorrect format. If this was caused by such a generic bug perhaps it would be possible to develop a patch which corrects the date output. Perhaps it would be possible to develop a patch anyway.

Otherwise is there an alternative fax program which works with class 1 fax modems? We have tried STraight Fax which does not work with this modem, but all the other fax software available seems to support only class 2 fax modems.

Either way I would be interested in any ideas.

I'm not quite sure of what you mean by MAC-type-menu feature, so I
can't help with the first one. There are a handful of multiple purpose
ACCs out there (JAMES comes to mind) so what you want may already exist
(except for #4, which should be handled by CLIPBRD.CPX). Items 1 - 3
though appear to really modify the desktop's functionality, so I find
myself wondering if perhaps you might wish to explore alternative
desktops.

I bought PI2 with the intention of using it to make minor alterations
to scanned photos (things like removing "red eye" and switching
cluttered backgrounds like an open closet to something less obtrusive).
PI2 wants to redraw the screen after every pixel change, creating a
frustratingly slow program. I also had some stability problems
(unexplained bombing). Every now and then I load a file and have a go
at it, but despite the excellent manual, I can't reliably load a file,
alter 20 pixels (the "red eye"), and save it in under a half hour.
I'll sell you my copy if you're in the States and still want it.

If a board has cracked, the machine will become unstable as the board heats and flexes. This is rather common on older circuit boards with high use, but I've never heard of it happening on an STe before (or anything Atari, for that matter). Still, they don't last forever.
Good luck tracking it down.

There's no such thing as messages which can't be traced, they all leave a
trace, the art is finding the server from where these originate from...

Let's look at the header of a well known spammer here... ;-)

Path: news.wanadoo.nl!news2.euro.net!newshub1.nl.home.com!news.nl.home.com!

Now, although this posting is considered here as spam, the poster has nothing
to hide, so all references in the header are true... for the example sake
let's assume it's a fake....

The first thing to do is to mail the posting back to the given email adress, in most cases it will return with a message from the webmaster informing you that the adress doesn't exist. Do not send him a couple of 5Mb big pictures of a mating hipothamus, or you yourself could be regarded as a spammer, besides it's a criminal offence...

The first item in this header is definitely genuine: news.wanadoo.nl. It's the computer my ISP uses to host the news groups. It was the last link in the chain of computers that have passed this spam around the world.
Let's next do the obvious. The header says this post was composed on the host 192.108.254.12. So we telnet to its nntp server (port 119):

telnet 192.108.254.12 119

We get back:

Trying 192.108.254.12 ...
telnet: connect: Connection refused

This looks a lot like a phony item in the header. If this really was a computer that handles news groups, it should have a nntp port that accepts visitors. It might only accept a visitor for the split second it takes to see that I am not authorized to use it. But in this case it refuses any connection whatever. There is another explanation: there is a firewall on this computer that filters out packets from anyone but authorized users. But this is not common in an ISP that would be serving a spammer service. This kind of firewall is more commonly used to connect an internal company computer network with the Internet.

Next I try to email postmaster@192.108.254.12 with a copy of the spam. But I get back: (remember this is a faked example!!)

Date: Fri, 07 Jan 200 21:58:13 -0600
From: Mail Delivery Subsystem <MAILER-DAEMON@wanadoo.be>
To: dennis.vermeire@wanadoo.be
Subject: Returned mail: Host unknown (Name server: 192.108.254.12: host not found)

The original message was received at Fri, 07 Jan 2000 21:58:06 -0600
from dennis.vermeire@wanadoo.be

----- The following addresses had delivery problems -----
postmaster@192.108.254.12 (unrecoverable error)

----- Transcript of session follows -----
501 postmaster@192.108.254.12...
550 Host unknown (Name server: 192.108.254.12: host not found)

OK, it looks like the nntp server info was forged, too.

Next we check the second from the top item on the header. Because it starts with the word "news," I figure it must be a computer that hosts news groups, too. So I check out its nntp port:

telnet news2.euro.net nntp

And the result is:

Trying 204.145.167.4 ...
Connected to lame.euro.net
Escape character is '^]'.
502 You have no permission to talk. Goodbye.
Connection closed by foreign host

OK, we now know that this part of the header references a real news server.
Oh, yes, and we have also just learned the name/address of the computer
euro.net uses to handle the news groups: "lame." ;-)

I try the next item in the path:
newshub1.nl.home.com nntp
and will receive a message similar to the one above. I will not quote all
messages from the servers here, this posting would become way to long...

Now let's jump to the last item in
the header: logbridge.uoregon.edu:

telnet logbridge.uoregon.edu

We get the answer:

logbridge.uoregon.edu: unknown host (remember this is just an example!!)

There is something very fishy here. This host computer in the header isn't
currently connected to the Internet. It probably is forged. Let's check the
domain name next...
The owner of a server in the US is registrated and can be found on MILNET.
The InterNIC Registration Services Host contains ONLY Internet Information
(Networks, ASN's, Domains, and POC's), use the whois server at nic.ddn.mil for
MILNET Information.

We get:
Record last updated on 23-Jul-96.
Record created on 20-May-87.

Domain servers in listed order:

NS.UOREGON.NET 137.39.1.3
UUCP-GW-1.PA.DEC.COM 16.1.0.18 204.123.2.18
UUCP-GW-2.PA.DEC.COM 16.1.0.19
NS.EU.NET 192.16.202.11

uoregon.net is a real domain. Since the host computer logbridge.uoregon.net
listed in the header isn't currently connected to the Internet, this part of
the header may be forged. (However, there may be other explanations for this,
too.)

Working back up the header, then, we next try:

telnet news.maxwell.syr.edu nntp

I get:

```
Trying 204.180.128.185 ...
Connected to news.maxwell.syr.edu
Escape character is '^]'.
502 You are not in my access file. Goodbye.
Connection closed by foreign host.
```

Interesting. I don't get a specific host name for that nntp port. What does this mean? Well, there's a way to try. Let's telnet to the port that gives the login sequence. That's port 23, but telnet automatically goes to 23 unless we tell it otherwise:

```
telnet news.maxwell.syr.edu
```

```
Now this is fun (remember this is just an example !!)
Trying 204.180.128.166 ...
telnet: connect to address 204.180.128.166: Connection refused
Trying 204.180.128.167 ...
telnet: connect to address 204.180.128.167: Connection refused
Trying 204.180.128.168 ...
telnet: connect to address 204.180.128.168: Connection refused
Trying 204.180.128.182 ...
telnet: connect to address 204.180.128.182: Connection refused
Trying 204.180.128.185 ...
telnet: connect: Connection refused
```

Notice how many host computers are tried out by telnet on this command! They must all specialize in being news servers, since none of them handle logins. This looks like a good candidate for the origin of the spam. There are 5 news server hosts. Let's do a "who is" command on the domain name next:

```
whois maxwell.edu
```

We get:

```
Maxwell Enterprises, Inc. (MAXWELL-EDU)
3512 West Peachtree Street NE
Suite 25
Atlanta, GA 30309
USA

Domain Name: MAXWELL.EDU

Administrative Contact:
Nixon, J. Fred (JFN) jnixon@MAXWELL.EDU
404-815-0770
Technical Contact, Zone Contact:
Ahola, Esa (EA55) hostmaster@MAXWELL.EDU
(404)815-0770
Billing Contact:
Peavler, K. Anne (KAP4) peavler@MAXWELL.EDU
404-815-0770 (FAX) 404-815-8805

Record last updated on 27-Mar-96.
Record created on 21-Apr-94.
```

Domain servers in listed order:

CARNAC.MAXWELL.EDU 204.180.128.95
HENRI.MAXWELL.EDU 204.180.128.3

I'd say that Maxwell is the ISP from which this post was most likely forged.
The reason is that this part of the header looks genuine, and offers lots of
computers on which to forge a post. A letter to the technical contact at
hostmaster@maxwell.edu with a copy of this post may get a result.

But personally, I would simply email the spammer a protest...
Hmmm, maybe a 5 MB gif of mating hippo? Even if it is illegal ;-)

Now, remember all of the above is fantasy... it's just an exemple, but trying
this approach on a real spam will give you about 80% chance of finding the
server where the message originates from....
It's quiet easy for newsgroups, with mails it's much harder, but then again
there are other and more effective ways to tackle spammers ofcourse... once the
victim gathers some knowledge, it's really easy to send the spammer some sort
of special mailbomb which originates from his own server... ;-)

I've always loved this "snooping around", it's much more fun then playing a
adventure...

Cheers from Belgium
Dennis

Hello Johan,

>The FPU (in the case of a 68881/2) is really quite useless for image
>filtering. It's far too slow, and the data tends to be in integer format,
>anyway. You also wouldn't want to use it for JPEG decoding (but a good
>FPU (possibly the one in the '040) can actually help there).
>
>The DSP on the other hand can do some blazingly fast filtering (that's
>what DSP's are for, mainly), but you'd have to try a good implementation
>to see that.
Photoline is not a "Falcon only" program, so the programmers had to made some choices. Have you ever tried Photoline? on a TT and 68040 machine it is very fast, in many cases beating applications that use the DSP. Like you say, this is probably due because the DSP routines are poorly implemented.

>MGIF can use the DSP for 3x3 and 5x5 convolution filters (and median
>filtering) and, IIRC, it's at least ten times faster than doing the same
>job with the '030 (an '060 machine might come close using the CPU).
Without the DSP, MGIF is extremely slow.... I would say that Photoline is a lot faster when using convolution filters and median filtering. Not to mention depacking JPEG. I realise that Photoline is not everyone's cup of tea, but for certain tasks it beats everything on our platform handsdown...

Applications which take advantage of the DSP, are only usefull on the Falcon. Since I don't have a Falcon, I'm focused towards applications that are good allrounders on all Atari's and clones.

Cheers from Belgium
Dennis

>If I use the RAMDISK (Installed as Z or as Ramdisk/ Drive U) for CAB's cache,
>cab seems to display all pages as source html only! I took a quick look at
>what was been written to the ramdisk and it seems that the filenames in CAB's
>cache are being truncated without their extenders, so CAB doesn't know what
>they are! For example, a file which should be 00000002.htm appears in cab's
>cache on the ramdisk as 00000002 !!!!!
Erm..., I tried your approach and everything works here just fine. However, I
did notice that in my regular cache there are html files without any extender
also. I have no idea why that is, but CAB doesn't seem to have any problems
with these. After all, it's CAB who created them. I checked the cache with the
CAB editor module, and all is OK.

Sorry I can't be more specific, but as a comfort....since these files are
present on a regular partition as well, it's not the Ramdisk who's at fault.

Cheers from Belgium

Steve is reminding us that there's no need to quote an entire message just to include one or two lines by way of an answer. I'm not going to comment as to whether the post he quoted from had this problem, so in general it's worth all of us reminding ourselves that it's considered poor 'netiquette' to include mostly quoted text in a reply.

The point is that this is an ATARI newsgroup, and the posting of html, vcards or anything that can't be decoded without a PC must be considered to be off topic. Surely it can't be difficult to ensure that posted messages are sent as plain text, and without the excessive quoting that seems to be the norm these days? I suppose that these are rhetorical questions...

I've actually been using the thing for about ten years (I bought it to run Notator and that's
what I've continued to do...anything else has been of peripheral interest).

BTW the Linkweiler Y2k fix appears to have solved my problem nicely.

>95". Got the upgrade from Indigo2 in Denmark in -98. Maybe they have
>more info and/or more copies to sell?

Thanks for that valuable knowledge!

1) Is version 4.02 in English?

2) Have you got an address, telephone number or web-site
identification for Indigo 2?

And lastly, and probably more difficult if version 4.02 is the
only Harlekin version you have used,

3) is it better than Version 3?

The main snags in versions 1/2/3 to my mind are

a) that the writing of a back-up when saving a file can't be switched
off. On a floppy system this can lead to loss of data if there isn't
sufficient room on the disk for the second file.

b) that the ramdisk is of a maximum size of just over one Mb
(marginally too small for my purposes), and the ramdisk folders and
files are deleted at a save-the-contents operation. If the save isn't
successful, possibly because there isn't room for a back-up file, then
everything is lost.

c) that the tens figure of dates over 2000 are represented by : : < =
etc in the file selector or when inserted into the editor.

Some indication of the price paid by you for version 4 would be
helpful to me in deciding whether the advantages of version 4 over
version 2 (which is the one I use) would be worth while, or whether
I'd be better pursueing the authors to see whether some of my
perceived shortcomings could be rectified!

It may be easy to define how to remove the main drawback (a) from
existing versions by someone with a knowledge of the program. But,
once again, thanks for the reply.

Thanks for the information, and the web sites. I'll be sure to check into that newsie-friendly one soon. Since my only online computer these days is my Mega ST4, and since I haven't looked into using CAB yet, at this point the only sites on the web I can use are the Newsie-friendly ones. My plan had been to learn Newsie first, then go to CAB.

Tell me, is the umich web site friendly to Newsie? I used to have the umich ftp address around here somewhere. Is that still operating?

According to what standards? Read the RFC and call me back.

Just because every damn Microsoft product comes pre-configured
to use HTML, vcards and RTF in the same message doesn't make it
okay to break standards and good mannors.

Because of having a too slow ST RAM in my Falcon, I could not use the
turbo
mode of my CT2 board (very bad screen flickering).
Around christmas I got a Wizztronics ST RAM card and it really works
fine
with CT2. So many thanks to the two guys (don't know who they were)
who
told me I should buy that one.

You might get it directly from Emile Tobenfeld himself. I upgraded to the very last (unreleased) version last year. His mail address and a faq on Dr. T's software can be found on his web-site: http://www.foryourhead.com/.

KCS Omega II is still way ahead of the competition (Logic, Cubase, Cakewalk) when it comes to power, ease and speed of use for MIDI editing and composition. I recently bought a PC (for other reasons) and bought Cakewalk (Pro Audio 9.0) and Logic (Silver, entry level version), but I will still use KCS for MIDI editing as it is MUCH better. (The other sequencers has of course a lot of power in other fields.)

From what I know:
Falcon, TOS 4.0x:
- FPATCH2: Fixes BCONMAP bug / bad sound system initialisation
- FLOPFIX: Fixes some nasty floppy bugs :)
- TOS4FIX/TOS4TRAP: Fixes FWRITE(-3) bug (prevents some programs from
printing) and some incompatibilities introduced by TOS 4.0x
- PARX_P01 & perhaps others : Fixes the VDI-fill bug in True Color that
prevents from filling with an other color that pure black
- and all the HSMODEM stuff, but these are not strictly speaking bug
fixes...
That's all that come to my mind ATM.

And also some for the CT2 (see Centek's and Aniplayer's site)...

XControl 1.31 always displayed the date in the day/month/year format
on my computer, so I don't think it's a Y2K glitch. By the way, it's the same
with Zcontrol. Does it have something to do with the "language" of the
computer ? Mine is French. As for "dateform.cpx", mine came with BoxKite
and I thought it's settings were relevant only to the said BoxKite.

In Sweden we've always (well, at least as long as I've worried about
writing dates) used YY-MM-DD (or even just YYMMDD), but apparently we've
been pretty much alone.

Unfortunately, over the last couple of years, the DD/MM/YY format has
become more and more common on food and things like that (obviously noone
wants to make a Swedish version of the marker software ;-). This would
perhaps not have been so bad, if only the American version hadn't shown
up here and there too.
I actually need to look around for a package with an obvious date (one that
could only mean one thing) to be sure what they mean sometimes...

From: Bruce <brew@fast.net>
Message-ID: <s7mm8s75oj832@corp.supernews.com>
Source record: 67387

I am having trouble with MagiC 6 and my hard drive... I had HDDRIVER 6 on my TT when I installed MagiC and everything was happy. I got a Syquest drive and HDDRIVER 6 wouldn't recognize it. I don't know if it needed to be configured or what, but it came installed on the TT when I got it and I didn't have any of the utilities for HDDRIVER. ICD 6 saw the Syquest drive just fine, but after I installed the ICD driver to my HD MagiC flipped out and give me a GEMTOS error when I try to boot!! Now, since I do not have the HDDRIVER disks I cannot reinstall it, the Atari HD Driver utils that came with my STacy, TT an Falcon will not boot the HD and ICD won't boot MagiC. Essentially I'm screwed... what I would like to know is should I buy HDDRIVER 7? Will that fix my HD woes and allow me to see my Syquest drive? If so.. great... but I don't want to buy it and end up still not able to boot!!! Any advice/direction would be greatly appreciated!

See the mails that came in parallel: This malfunction might
be caused by older TOS versions. I never encountered this using TOS 2.06
and
TOS 3.06, resp. . But there might be another source of malfunctions
occurring if a TT030 is used: Its floppy controller chip does not work
reliably under all conditions. AFAIK, there are thermic problems.

I've tried to make all the links on my site (real address at
www.users.zetnet.co.uk/aseabrook/a_index.htm) to the real URLs where
possible, for this very reason.

I know atari.org's services are free and run by enthusiasts, but
having to do this kind of defeats the object of having redirections in
the first place... :-(

Hahaha. If someone would ever make a bootleg of one of my gigs,
I would even help him I guess :-)

> Why isn't all the music which the artists have stopped performing
> declared freeware?

Good point here.
I think it should be.
What's the main purpose of 'royalties' these days? Aren't record
companies and the really big artists the only winners?

> Cubase is powerful, it works, is stable, and is still being

> think it's worth it, don't buy it. What's wrong with that?

Okay. Professional studios. If you're making money with your
music it's a different case. But I think there aren't many new studios
that really need an Atari standing next to their Mac G4 - correct me
if I'm wrong.
I'm no professional :-)

> Perhaps you should call Steinberg with your suggestion, maybe

> Want it all for nothing. I'm sure you'd be using a pirate
> version of the TT, if there was such a thing.

Haha, I FOUND my TT. It was being dumped by my university. Same for all
the other Atari-stuff I have found: 2 STE's, 4 STFM's, a *lot* of SM124's,
some

SM125's, some mice, a Megafile 30...
Wouldn't it be a shame to have all these machines rot away somewhere? I guess it
would. So I try to use them. Or exchange them for other stuff I can make music
with... Or a small amount of money.
(Someone interested? I live in the Netherlands.)

Well I'll requote what I want to requote and you can filter me out.

You obviously have money to spend nit-picking other peoples posts
rather than helping with Brian's problem.

And so I have an attitude? hehe

If you have to download the entire news group I suggest you try PINE
and surf headers. Will save you lots of money!
I even try to help you...

Hm, Mymail by Erik Hï¿½ll definitly produces vcards, I get them all the
time. And Okami has no problems showing html.

So, the reason to stay away from these encodings are not that they
can't be read, but because they serve _no purpose_ in a newsgroup.
Simple as that!

It is. Technically, you are modifying and distributing someone else's
intellectual property. I don't think Bill Gates would appreciate if you
started distributing a patched version of Windows.

Now, distributing a patch itself is something different, because this is
your own code.

Yes. Prove it for yourself by downloading the demo from Uwe Seimet's web site,
I'm sure that he will be along with the URL, which I don't have to hand ATM.

Alternatively you could try the driver CBHD, English docs etc to accompany the
German package are on my web site (on the translated apps page), this PD
driver will also function well but is IMHO nowhere near as easy to set up as
HDDriver.

As you've found, ICD's drivers aren't suitable for use with MagiC.

Galen said:

> I guess the Falcon's serial port is only a 56K port.
> Anyone care to comment on this?

I would. The answer is that it's only limited by the speed that you can extract data from it. My CT2 Falcon with MagiC6 and HSModem is quite happy at twice that speed, for standard Falcons you'll have to start dropping that speed, especially when used with higher colour depths. Monochrome gives the best chance of success at higher speeds, which is fine for downloading files etc.

BASIC Computer Games
David H. Ahl (Creative Computing), 1978, 183 pages.

The classic of all classic BASIC games books. I've spent hours with this one back in the 80's and would never consider selling my copy, but I happened to come across a second copy. The illustrations throughout the book are great! My all time favorite games from this book are: Animal, Hammurabi, Life, Life For Two, and Lunar LEM Rocket, Orbit, 3D-Plot, and many others.

But of course the source for the all-time greatest game is contained in this book as well: SUPER STAR TREK. This is the original of originals. Converted directly from Mike Mayfield's HP2000C source code, which was the "standard" Star Trek in 1973, that was put in the HP contributed program library and onto a number of HP Data Center machines.

here's the header file from the extensive full source code listing in the book:

```
10 REM SUPER STARTREK - MAY 16, 1978 - REQUIRES 24K MEMORY
30 REM
40 REM **** **** STAR TREK **** ****
50 REM **** SIMULATION OF A MISSION OF THE STARSHIP ENTERPRISE,
60 REM **** AS SEEN ON THE STAR TREK TV SHOW.
70 REM **** ORIGINAL PROGRAM BY MIKE MAYFIELD, MODIFIED VERSION
80 REM **** PUBLISHED IN DEC'S "101 BASIC GAMES", BY DAVE AHL.
90 REM **** MODIFICATIONS TO THE LATTER (PLUS DEBUGGING) BY BOB
100 REM *** LEEDOM - APRIL & DECEMBER 1974,
110 REM *** WITH A LITTLE HELP FROM HIS FRIENDS . . .
120 REM *** COMMENTS, EPITHETS, AND SUGGESTIONS SOLICITED --
130 REM *** SEND TO: R. C. LEEDOM
140 REM *** WESTINGHOUSE DEFENSE & ELECTRONICS SYSTEMS CNTR.
150 REM *** BOX 746, M.S. 338
160 REM *** BALTIMORE, MD 21203
170 REM ***
180 REM *** CONVERTED TO MICROSOFT 8 K BASIC 3/16/78 BY JOHN BORDERS
190 REM *** LINE NUMBERS FROM VERSION STREK7 OF 1/12/75 PRESERVED AS
200 REM *** MUCH AS POSSIBLE WHILE USING MULTIPLE STATMENTS PER LINE
205 REM *** SOME LINES ARE LONGER THAN 72 CHARACTERS; THIS WAS DONE
210 REM *** BY USING "?" INSTEAD OF PRINT WHEN ENTERING LINES
```

In addition to full instructions and a sample run, is an excellent discussion on the origin of the quadrant nomenclature adopted by the game.

From back cover: "101 imaginative and challenging games for one, two, or more players -- Basketball, Craps, Gomoko, Blackjack, Even Wins, Digits, Bombs Away, Horserace. Simulate lunar landings. Play the stock market. Write poetry. Draw Pictures. All games come complete with step-by-step programs and sample runs. All programs run on Microsoft 8K Basic, Rev. 4.0. Basic conversion table included. David H. Ahl is the founder and publisher of Creative Computing."

No, the Falcon's serial port is 230K if I recall, the trouble is the CPU
power necessary to keep up with this, especially if you are using hi
resolutions or true colour, plus other CPU consuming gizmos (like the
mouse). On accelerated machines it should be OK.

From: Olivier Scalbert <olivier.scalbert@village.uunet.be>
Message-ID: <85hb4p$rh5$1@newnews1.news.nl.uu.net>
Source record: 67278

Hello

1. I would like to write to code for ST. 14 years ago I used Megamax and Metacombo. What is the best programming environment now (C and assembler) ? Do they run on emulator ?

2. Where can I found info on ST (gem, interrupts, memory map, video ram , ...)

3. I would like to find the name of an Atari ST game. This game is a kind of Arkanoid, with very nice sound (percusive sound, bells, ...). Any idea ?

Thanks very much

Olivier Scalbert

Hi Galen,

You're right, it's not really what I wanted, but it's appreciated anyway. Actually, I found (I think on their web page) some info indicating it was not a good idea to leave the cartridge in the drive. Maybe it's just a safety precaution in case you move it, etc. Also, if you have more than 1 cartridge, you of course have to eject to switch between them. Their web page also had a whole system of info dealing with cartridges that are afraid to come out of their shells.

My drive is working fine now. The cartridges eject like they are supposed to. I don't know why it was misbehaving earlier. Just one of those mysteries. ;-)

Thanks,

Clayton Murray

> HDDRIVER 7? Will that fix my HD woes and allow me to see my Syquest drive?

Yes, it will. You will have to configure HDDRIVER to scan for your
drive's SCSI ID. You can do this with the commercial version, of course.
You can check that HDDRIVER basically works with your setup by trying
the demo version of HDDRIVER 7.8:

The company that owns the copyright of this program still exists and has no intention of supporting any further development (I asked when I discovered the problem).

The program operates in freestanding module form, and each of the modules affect the date, so it seems to me unlikely that a patch could be effective (I would like to be proved wrong on this one!). Hence the only solution appears to be in altering the code of the progam itself, and anyone doing this without the blessing of the copyright owners could theoretically be in legal trouble unless it was done for their own use only, and not published. :-))

Actually there's only GNU C in development I think.
Available from Sparemint ftp archive:
http://wh58-508.st.uni-magdeburg.de/ftp/pub/mint/
I would wonder if it runs not emulated.

> 2. Where can I found info on ST (gem, interrupts, memory map, video ram ,

An archive of ST-games is at the page "little green desktop".
You may find it with advanced search of any websearcher.

IMHO:
Assembler: Assemble (http://dhs.atari.org or
http://wombat.ludvika.se/dhs then File Section then Misc. Files, also
doc here). It runs at least under TOSBOX.
C: #1: GCC #2: SozobonX (sorry no URL at hand)

> 2. Where can I found info on ST (gem, interrupts, memory map, video ram ,

Try these FTP-sites under Programming or Docs folders:
ftp://chapelie.rma.ac.be/atari/
ftp://ftp.lip6.fr/pub/atari/
ftp://ftp.funet.fi/pub/atari/
and also the DHS site above (best src for low-level coding stuff!

I'de use Assemble/Adebog to code in assembler and to debug anything.
It used to be a Commercial software, it is now a FreeWare.
You'll find it on ftp://anonymous@ftp.lip6.fr/pub/atari

707. various OS

Newsgroup: comp.sys.atari.st
Date: 2000-01-12 00:00:00 UTC
From: Martin-Eric Racine <q-funk@pp.fishpool.fi>
Message-ID: <Pine.MNT.4.10.10001121737470.163-100000@rakas>
Source record: 67287

This came on a French mailing list. Below is my English version.
It's completely off-topic, but quite hilarious. Enjoy! Q-Funk

Air DOS

All passengers push the plane until it starts to fly, then they
jump onboard and let it glide until it falls down. They get out
of the plane and start all over again.

Mac Airlines

All flight attendants, check-in clerks and luggage carriers have
the exact same face and clothes. You get into the the plane
without realizing it and once inside, you notice there is no
window so you are not quite sure if you made it there. There is
no vibration during takeoff or landing. In fact, you're still
not aware that you're inside a plane and that it's already
flying. Every time you ask a question about the flight's
details, you are politely reminded that you don't need to know,
you don't even wanna know and that everything will be handled
without you being aware of it. Therefore, please don't bother
asking.

Windows Air

The airport is really nice and colourfull. The flight attendants
are really friendly. The luggage check-in procedure is really
straightforward. The takeoff is outstanding. After about 15
minutes, the plane explodes without warning.

Windows NT Air

The service is similar to Windows Air, except the ticket is
more expansive, the planes are much bigger and when they explode,
every plane within a 80km radius is blasted too.

UNIX Airways

Each passenger brings a piece of the plane to the airport. All
passengers then proceed to the runway and start assembling the
plane, while constantly arguing about what type of plane they
should build. Then, one of the passengers is designated as the
pilot and proceeds towards the the cockpit, where manuals that
describe the plane in every detail are found. However, there are
no piloting instructions, so the plane remains grounded.

Linux Air

This company was founded by unhappy employees from all the other airlines. They build their own planes, their own check-in counters and pave the runways themselves. The ticket is a real bargain, as it only covers the printing price. You could also download the ticker yourself and print it at home. Once onboard, you are handed four bolts and a toolbox, along with a guide called seat-assembly.html. Once you have managed to install your seat, it turns out to be completely adjustable and extremely comfortable. The flight leaves and arrives on time and without any incident. The meals are very light and quite nutritious. When you try to explain to the folks that you traveled for free on a luxury plane, they stare at you like you were an idiot and scream "YOU MEAN YOU ACTUALLY HAD TO INSTALL YOUR OWN SEAT?!!"

have a look at http://spamcop.net there is a formular to trace such
posts and --if wished-- to atomaically generate a protest mail to the
spammers ISP. Very easy to use and free. Often this is enough to get
the spammers account closed by his ISP.

>one of those mysteries. ;-)

I had a syjet that when I first started using it, the eject
mechanism would lift the cartridge but it wouldn't eject. After
I worked it a bit (lifting and releasing and ran the drive a bit)
it finally started ejecting. I suspected that possibly the
lubricant was a bit sticky (from age or temperature or maybe the
initial viscosity of the lubricant was too high) and it was
causing the sticking. As it was exercised a bit and warmed
up, then it started working and I haven't had a problem since.

Not many Atari Users in NA, but atleast we can get together here with our world counterparts.

There are plenty of poor students. I would think that should be easy:-). Probably don't have any midi instruments. Perhaps you will have to supply the keyboard as well:-).

I don't think idiot was used? But you probably read the posts better than me:-).

> The use of HTML and grahics in newsgroups is becoming more
>and more acceptable.

Actually this in not true. It is becoming done more often. Very few people like or accept it. Without the flamers, how are these people going to know what they are doing is a waste of time and rude. I find pictures really slow NG down and then WHY have them? Just use HTML based webpage BBS systems.

The last guy on a NG I am on finally lost his IP service as he continued to post Binaries to NG. The last one was a 500k Gif. He didn't listen, didn't learn and even had some people defending him. That didn't stop me from putting an end to it.

Especially since many people are sick of it, and so are NEWs providers, who don't like the wasted bandwidth.

> For some people, that will be a problem as you
>note. Unfortunately, time marches on and many taboos fall to the wayside.

Perhaps when NNTP disappears.

Besides the puny ST that you spoke of worried about a measely 20k was actually a User with a Cablemodem, on his 128meg TT. I was surprised to see his reply. But I do use an ST and 20k is nothing. But its the thought that counts and seeing you didn't bring a binary this time around shows your thoughts are in the right place here. Besides Dan said good things about you:-).

Brian.

>Could you describe what you did? I'd like to try it.

If you are referring to "how I got it to work", nothing other than installing it, and editing the LDMODULE.CFG as per the PI2 Addendum Manual (which basically redirects paths to the LDMODULE folder).

And as far as my experiences with the program: I've used Positive Image 2 to basically tidy up, brighten, crop and create layered graphics and or text. Nothing too difficult. And perhaps I find it more useable than most [speed-wise] since I'm running the Falcon-specific version (which makes use of the DSP extensively) in True Color on a Nemesis-enhanced Falcon.

I also like the fact that despite the resolution you are working in, the picture retains it's image type (True Color, 256, Greyscale etc) - unlike PixArt 4 which changes the image to whatever resolution you are in at the time.

And I haven't had too many problems, other than the fact that it will only SAVE pictures in it's own directory, and occasionally will come up with a dialog box telling me it "needs to be installed before running" (!?)

And a couple things don't work right - like the BRUSH size is supposed to _also_ determine the LINE size (line creating tool); it doesn't. :^(

And with regard to PixArt 4:

I found most of the time it wouldn't load images AT ALL, and if it did, they were simply corrupted garbage. And when it did work, saving an image always added a vertical white band to the right side of the image itself, which wasn't there before saving. And it frequently bombed. In other words, very unpredictable behavior. Add to that the fact that despite it's relatively high price, it came _without_ a MANUAL! (and the promised English HYP version of the manual has yet to appear).

I wonder what corporation Mr. Lai works for. Surely not Atari, I hope! Tales abound of how much unpaid work they got out of their people in the final years.

Perhaps Mr. Lai has the inside track on why Musicware were requiring the Notator SL dongles as a condition of the upgrade to Notator Logic, then when you phoned them for support two months afterward, they said,

`Oh. I didn't realize anybody still used the Atari. Why don't you get yourself a Mac?'

If everyone was supposed to cross platforms to the Mac, what the heck did they want with old Notator dongles which would only run with a stock 8mHz 68000 TOS machine?

Tobenfeld had the right idea. His work wasn't outrageously priced, we supported him, and in the end, he thanked us by releasing a whack of code.

None of us got anything for free. It all costs. I have arguments every week with at least one person who thinks that my enjoyment of non-commercial `classical' music on the FM radio band is harmful to the balance of payments on the third world debt, and therefore, a bad thing.

Now where was I? I was going to post something intelligent and helpful but I got all worked up. Maybe it will come to me later.

Might as well add my name to the 115k port list! (single TOS on a Falcon MKI 14 meg). Could it be the modem limiting to 56k? Either way, I don't see the point even if it could be set for 115,000,000. An average 6k download (as reported in CAB ((peaking at approx 20k))) whether set for 115k, 56k or 28.8k is my experience!!!

Hi, I've sold my Falcon so I have Cubase Audio Falcon with the Falcon Digital Interface for sale.
Included is the original box-case, latest version (2.06 I believe,you can get it from Stienbergs ftp),dongle,external clock (if your not using the FDI) and of course the Soundpool FDI which has optical and coaxial spdif ins and outs.
I'm located in Canada and looking for $250 dollars Canadian (approx +- $175 US) plus shipping.
Email thegoldbug@home.com or post to group.
Thanks!

Something like a little binary editor designed to overwrite part
of the original code using the data enclosed in the package would
be legal.

This has happened to just about anyone who went from Atari to
MagicMac/PC to Mac/PC. After a while in the emulator world,
one tends to forget what's going on with the real thing.

Hey Lonny,

This might come as a surprise to you, but a _LOT_ of people
are still surfing in off-line mode, where one has to download
everything first, then sort through it all, because they cannot
afford the per-minute cost of _local_ calls to their ISP.

Then it's very very much better than version 1.2 which was way too slow
to do anything with it on a mere Falcon.

> Now if you want to talk about a slow, nearly useless, over-priced graphics

That's strange. I bought quite some programs over the years (Truepaint,
Positive image, Papillon and Pixart and maybe others which I don't
remember
because I threw them away long ago) but at least 95% of the time I use
Pixart (version 3, I don't like the UI of version 4) and the only
times
it crashes is at extensive work with truetype fonts and sometimes at
working
with several big pictures (I got the impression that it forgets to give
back memory after use sometimes). BTW, the other 5% are at picture
conversion and rotation where Papillon is better.

From my own experience, I do not think that this is quite true.

I had always switched on the SyJet before inserting the cart.
When I was at PMP, my SyJet was passed from machine to machine without
ejecting the cart; the result was bad sectors and a lot of problems getting
the cart to reformat !

Apologies: I was thinking about the setup where you have it terminate after a short time and use it as a registered app for .CPX files: this only works with an AV aware system (ie needs multitasking).

Have a look at my Y2k page (URL in sig below). Updates have slowed a
little now I'm back at work after the holidays, but it was updated a
myriad times in the first week of the new year and I'm still gathering
info here for the next update. The Linkweiler patch is available from my
page or the Belgian FTP server.

And you are just adding to the thread.

I have learned to filter/ignore or whatever so I can maintain
my sanity here. If someone wants to pick on me or lecture me for what
started out as an attempt to help a fellow Atari user,
well then that is just sad. I see posts every day from spammers
an many go un-replied to. How hard is it to cut a fellow
Atari user some slack, so the post was about 3k tops and
that puts some in the poor house. I don't think so.

As I said before and I learned this from the Terry May
thread. I will post as I please and you all can
just not read my posts. I may not agree 100% what
Terry says/said but I also did not enter that thread
complaining and I think what he said about ignoring
post is the smartest thing I've seen lately.

Be careful if you have an IDE drive and use this feature. I used HD driver
about two years ago when I got my Falcon and Syquest Drive. It acknowledged
the Syquest and Turned off the IDE. Because it doesn't scan IDE you have to
turn it back on manually. Of course Panic set in, and UWE helped me sort
out what I had done.

Now back to .tech to follow up on another problem.

Just using some of my own Trouble shooting techniques.

I uploaded 4 posts to the Fast Club CD thread. The first 3 appeared to me
when downloading for offline reading. The last one didn't.

I requeued the post. Then uploaded it again. I checked the log file. And it
showed sent. I still do not see this post.

So, can anyone tell me if they see this post once, twice or not at all in
the FAST CLUB CD thread.

Thanks.

Brian.

I don't know French either, but there is a free web-based translation
service at http://babelfish.altavista.digital.com/
I use it all the time to translate foreign Atari web sites.

> If you want to look at it I could scan the pages and email the pictures.

If you don't want to try the web-based translation, send the scanned
pages to me at Andy@atarist.com. I'd be happy to translate it and send
you a copy!

These were surely soundchip (that is "beep") musics...
>
> Anyone know a program that I could use to make these types of TOS
> Music files from WAV, AVR, or MOD files?
AFAIK there is no direct utility to create such auto-playing programs.
Instead you have to use a player (most of the item provided as an
accessory).
I am afraid playing these formats require some CPU power and often
lacks the part that is grabbed by GEM ! AFAIK you can play MODs in
medium quality under GEM in the background with a standard STe (with an
older ST, it will be harder). For AVR and WAV if the sample is not too
big (that is it can lie in memory), a STe and perhaps a simple ST is
enough. If it is bigger you must have an hard disk.

That's a possibility I hadn't thought of. I followed Martin Graiter's design, but messed it up somewhere. I have no experience creating circuits on those little circuit boards. I probably screwed up the soldering part, but I don't know... It's more comforting to me to buy one already made so I can't screw it up! Would anybody out there be willing to make & sell me one?

I usually don't find the need to use a printer spooler much, but lately,
it would come in handy. And I realized that I don't have one - at least
one that works under MagiC 5 on my Falcon.

Ideally, it should work well with CAB 2.7 as well.

Any suggestions?

I have some old Atari STE software - Monkey Island 1, Kick Off 2, Seconds Out and Home Accounts. Would I get a fiver or a tenner if I tried to sell all at once? Or should I just chuck them?
Mike

> My version does not contain any CPX... Could you direct me to where you
> got yours from or send it to me? Or else do you know where to find SAM
> 1.2?

Hmm, I guess that means I forgot to include it (there was only ever one
distribution of 1.3, unless someone else re-packaged it).

I've just uploaded the CPX to my website, and will update the SAM 1.3
archive to include the CPX.

http://www.btinternet.com/~AnthonyJ/kpp/sam_set.cpx

The CPX was not modified in 1.3, so the CPX at the above URL is the 1.2
version - I would recommend people use the 1.3 release, even though few
people actually made use of the bug-fix.

Anthony

The CD I just got from SFT is called "Fast Club CD #3"
and I've had no problems with it so far.

I've tried to be nice, I won't stoop to name calling.

So you are (in a round about way) trying to tell me there is not one
program that can surf news headers on the Atari?

I know for a fact that newsie can do this as well as PINE.

Well it's my misforture that unlike spammers you know I'm here
so you can vent your frustration on me. That's cool
I just added another person to my filter list.
Care to guess who?

Have a nice day, been nice chatting with ya.
Sorry if this post to cost you money, but then you are content
with your setup so it's not my problem.

Well, I have just double checked and I have other CDs the same as the Fast Club CD. Blue Surfaced Cds. I don't believe these are re-writeable as they would be far to expensive to market and serve no real beneficial purpose to the seller.

Clearly it is a problem with this copy of the CD.

Well i'd recommend MiNT-net for that but that may be just me...
(wait, can it do NAT these days? if not you'd need something
else on the NAT box, but only on that one of course.)

> What I need to know is how do you
>connect 3 computers together with this hardware layout.

The `LAN ports' are just regular serial ports only with different electrical characteristics, they're not faster or anything like that... (at least electritcally its the same thing macs used for their early slow way of networking called `appletalk', but to use them like that you'd need special drivers which may still not exist.)

Anyway i'd just use null modem cables, connect the `normal' serial ports (which go to the same uart chip) and set up 115200 bps slip links with header compression. (or ppp, but slip has less overhead and for fixed links ppp's features are of no use.) Actually I believe the TT's ports can do 230400 too but i'm not sure about the other machines... and use modem2 and/or serial2, modem1 is on a different uart that can only do 19200 bps. Make the fastest machine the router (and NAT box, i.e. the TT), meaning you'll have one slip link from the TT to the Mega STe and one from the TT to the Falcon. Actually since these are all ataris you could also use plip (parallel port ip) for one of the links, thats a bit faster than serial...

And btw 115200 bps slip is also what i used years ago to link my Mega STe to the unix (BSD) box and it had no problems getting some 10K/sec throughput with ftp. (well ok, that was with a hardware fix, see below...) It even for a while did uucp-i over tcp to my `ISP' over that link after i switched from analog to isdn (with the BSD box routing the packets to isdn, single channel sync raw-ip) and that little 68000 then exchanged my mail and news with nearly isdn speed (sending and receiving at the same time) and still had CPU cycles free.

The hardware fix: On the Mega STe atari screwed up (at least on mine, but others reported similar problems): With the original SCC chip (thats the uart that controls the faster serial ports) serial IO on those ports could interfere with disk DMA(!), which had me searching for a long time for mysterious data corruption even though the protocol on the serial link discovered _no_ CRC errors. (anyone who still knows what protocol i was porting back then gets a virtual cookie!) When i finally replaced the SCC with a better pin-compatible Zilog one the problem went away... (Don't remember the part number anymore but this chip was also mentioned in the hsmodem docs, i didn't change its clock tho.) It also has 8 bytes FIFO on each channel, the original one only had 3, so if you get `silo overflows' at the higher speeds (receiver overrun, would cause tcp/ip to have to resend packets) that would be a way to fix those too. Actually as i remember on the TT the SCC also had DMA channels but i have never heared of them actually being used... (that would be another way to get rid of receiver overruns, and it would lower the CPU load too. But of course receiver overruns are more likely to occur on the machines with the slower CPUs, where you don't have the luxury of DMA on the SCC.)

> Is there some other

Source record: 67123

I remember reading an interview with the Milan guys on Bengy Collins' web site. Bengy, if you're reading this, is there any chance of another interview?

I have several questions and I'm sure others in this NG do, too. I'm sure enough has happened since the last one to justify another.

Maybe we can get a list of questions going. My questions are: (1) Will we have the option of buying the Milan motherboard separately? (2) What exactly has Motorola agreed to? (3) How do you plan to distribute Milan computer around the world - or what is your marketing strategy?

Andy

PS - What is Bengy's email address? I tried collins@bulli.com but it wouldn't go thru.

Rename the TOS file to MAGIC_PC.OS (I know that's strange, but do it!)
Make sure this file is in C:\ (NOT in a folder).

That should do it, I think.

> the cart to reformat !

True. My EZ135 manual states that the cartridge may stay stored inside
the drive. In fact, they recommend it (probably because the cart isn't
as dust-tight as it really should be -- one grain of dust inside and
the cart can be toast!).

However, no Syquest drive is designed to be moved with the cartridge in
place. Any motion in excess of 10 degrees or exceeding 1G can damage
the cart!

The moral of the story. Disk in if you are just shutting down without
moving the drive. Disk out if you do move the drive (also, wait at
least 60 seconds for everything to park properly).

1620 meters, I'm told. Baikal has roughly as much water as all the
US/Canada Great Lakes combined due to its stunning depth.

Hi all,

I don't know about the rest of you, but I thought it a bit odd
that there was NO web address to this place. How does he expect
to sell anything if we can't see what's there? Does he expect us
to call and ask "Do you have any.....?" - to which he may have to
reply "Nope. Go fish", and so forth. So I emailed him about the
address and a few hours later I got back:

>http://members.aol.com/SWMORETP/AP.html
>
>The catalogs are not up to date because we have been so busy.
>You will have to ask if a product is still available, many are
>one-of-kind items.

> Any help or suggestions would be appreciated.

Superboot isn't y2k compliant, as you've discovered. It's only the date and time setting function which is a problem, I believe, so just turn off date and time setting in Superboot and use something else for teh job. As you're using Xcontrol anyway I'd suggest you use the clock CPX which can be configured to request the date and time at bootup.

NB Your STE will also have a problem with the XBIOS clock which can be patched, so to make the clock CPX work properly you'll need to install the Linkweiler y2k patch as well.

Fuller details, downloads and links to software are on my y2k page, address in signature below.

Message-ID: <387E74D2.E82305ED@the-crow.co.uk>
Source record: 67152

Hiya
Just dug out and resetup my trusty old ST for a bit of Vintage computing... got tones of games I never got round to playing.. and low and behold I have lost the driver disk I got with my HD, so now I cannot format/partion or generally setup the HD :(((

So if anyone out there has a copy of the Gasteiner HD utils disk could they ZIP it up and email it to me PLEASE!!!! or a util that will do what I reqire.. I have tried teh Atari HDX utils but to no avail.. claims the drive is formatted with an old version of HDX and then won't let me format it anyway :((

The machine I am using is a 1040 STe... anyone know what revision has the duff DMA chip (original HD machine is my STfm which is still buried in a box somewhere and missing a PSU).

Any and all help much appreciated.. spesh if someone can supply me with that disk :).. the controller card is a G-Soft (GE-Soft?) card as supplied by gasteiner with their Drive Kits.

Hope to hear from someone soon.

Graeme
(email driver files to me at graeme@the-crow.co.uk) PLEASE!!!

I bought one a few weeks ago since the floppy of my ST quit working and
there are only 1.44 FDD sold but unfortunately the documentation is only
in french and I haven't found anybody who could translate it.
Centek had told me that there is only french documentation but they said
that installation is so easy that the documentation is not needed
anyway.
However it's several pages including a chapter about various floppy
controllers (seems to tell under which circumstances AJAX is needed ?!
).

If you want to look at it I could scan the pages and email the pictures.

Gerhard

```
Centek's adapter is probably the same as the DIY HD kits that you can find
in the Quick FAQ. I beleive it includes an optional AJAX chip.

If you can't build the circuit yourself, why not get a electronics workshop
to do it for you. It's pretty simple actually. What didn't work in yours ?

>interest. Am I missing something ?

No, you aren't missing anything. I have been waiting to see people on this NG use Wensuite. So far I have only seen the Wensuite Release Post, by the authors, and I believe I saw a Hades user trying it recently, and now you. I just like seeing new stuff appear around here. Same as when I started seeing ASH emailer, and all the other EMAIL and NEWsreaders that have been appearing and updated here. I just like seeing Atari Users using Atari software.

And its probably Y2K compliant, just to stay on topic:-).

Since I know little about Wensuite, I may start a separate thread to ask questions about it.

Later Brian.

>version of CAB_JPEG.OVL (that comes in the archive with JPEGD.PRG)
>replaces the standard CAB_JPEG.OVL file in the MODULES folder.

Yup, Done this. I thought that the later versions of CAB_JPEG.OVL would
have incorporated the both versions into one, since the file size of the
Standard overlay has gotten so large.

>I simply rename the original to CAB_JPEG.OV_ in case I want to switch back
>to it if I find a site that uses a lot of progressive JPEGS (Like the
>Atari Historical Society).

Yes, however this is a pain in the butt.

>But in my particular testing, I found the DSP-based CAB_JPEG.OVL to load

> and since I haven't looked into using CAB yet, at this point
>the only sites on the web I can use are the Newsie-friendly ones.
> My plan had been to learn Newsie first, then go to CAB.

There is nothing wrong with learning NEWsie. There is lots there and it
does lots. CAB is a piece of Cakes since you already have sting set up.

All you have to do is grab CAB 1.5 and CAB 2.7demo. Get the Booklage or the
Ackerman Overlays for CAB that work with STing. Place one in the main CAB
directory or the module folder, I find some of my STs are picky and like it
in the CAB directory itself. Soon you will find yourself Web Browsing.
SLower than NEWsies browser, but does much more and is more complete.
What version of TOS do you use or Magic and such?

>Tell me, is the umich web site friendly to Newsie? I used to have the
>umich ftp address around here somewhere. Is that still operating?

Last I remember it should be very easy. Type in the URL and go. Many files
and directories appear. You will be busy. I would download the index. Its
in a couple parts. THis gives you a listing of ALOT but not all the files.
Some fell through the cracks.

Let me know how things go.

Brian.

>>The DSP on the other hand can do some blazingly fast filtering (that's
>>what DSP's are for, mainly), but you'd have to try a good implementation
>>to see that.
>Photoline is not a "Falcon only" program, so the programmers had to made some
>choices. Have you ever tried Photoline? on a TT and 68040 machine it is very

Sure (the v2.25 demo).

This was really about how the FPU is not too useful for most image
processing, while the DSP can be, though.

>fast, in many cases beating applications that use the DSP. Like you say, this
>is probably due because the DSP routines are poorly implemented.

Yes. I've seen programs that claim to use the DSP for filtering be only
slightly faster than MGIF in CPU mode.

>>MGIF can use the DSP for 3x3 and 5x5 convolution filters (and median
>>filtering) and, IIRC, it's at least ten times faster than doing the same
>>job with the '030 (an '060 machine might come close using the CPU).
>Without the DSP, MGIF is extremely slow.... I would say that Photoline is a

Uhm. Define 'extremely slow'.

>lot faster when using convolution filters and median filtering. Not to mention

And you would be wrong.

I just tried this yesterday (on a 602x475 image in 24 bit RGB mode) and
PhotoLine and MGIF were within 10% of eachother when doing 3x3 median,
3x3 convolution, 5x5 convolution and 3x3 max filtering.
This was timed on my Falcon+AB040 with MGIF running without DSP code,
using a simple wristwatch. The various functions took 4-14 seconds to
execute, so there was an error margin of perhaps 10% or so too.

Naturally, other hardware will not behave in exactly the same way, but it
would surprise me if there were any major differences.
MGIF is in no way optimized for the '040. In fact all that filter code is
100% C, compiled for the 68000.

If you were comparing to for example the PhotoLine 'edge' filter, that's
quite another thing. That uses special code for one particular kernel,
which will of course be a lot faster than actually doing all the

multiplications (and sometimes a division) for a general covolution kernel.
MGIF convolution filtering always does what PhotoLine calls 'free' filters.
(I could bring up 5x5 max filtering as an example where MGIF is quite a
bit faster (actually, MGIF does any size max filter at about the same
speed as a 3x3 one). ;-)

Naturally, I could easily write specialized code as well for some kernels,
but as long as noone complains about the speed I, won't worry about it
(I do after all have a Falcon with a DSP myself, and nobody is paying me
for MGIF).

>depacking JPEG. I realise that Photoline is not everyone's cup of tea, but for

When loading a JPEG in 24 bit mode, PhotoLine beat MGIF by 10-20%, which is
as it should be since I'm using an old version of the IJG JPEG libraries.
On the other hand, MGIF loaded a test GIF about twice as fast as PhotoLine.

>Applications which take advantage of the DSP, are only usefull on the Falcon.

Unless of course they also have reasonable CPU-only implementations of
the functions in question.

A few CT2B related questions/notes....

Anyone know if the Falcons CACHE needs to be disabled when running
in Turbo Mode?

If the CACHE settings doesn't matter, are there any programs
that benefit with the CACHE on or off in CT2B Turbo Mode?

Anyone have a English Version of the XCONTROL Panels FGENERAL.CPX
for use with the CT2B? If so, I need it.

Also need the following 2 FRENCH words Translated into English...
NON and OUI I think I know the meanings but need to make sure.

Anyone know if the CT2B board has any better Y2K compatibility over
a Stock Falcon or other Falcons with hardware upgrades?
I've not ran into any Y2K problems, but am curious about this.

Thanks in advance

I'm not quite sure what you mean with "doesn't scan IDE". HDDRIVER scans
all the devices it was configured to scan. You can either let HDDRIVER
determine automatically which device IDs to scan ("Auto Configuration")
or you can enter the IDs manually.

822. ROM dumper utility?

Newsgroup: comp.sys.atari.st
Date: 2000-01-14 00:00:00 UTC
From: Joseph Zorzin <redoak@forestmeister.com>
Message-ID: <387EF462.C3C126EC@forestmeister.com>
Source record: 67180
Cross-posted to: comp.sys.atari.st.tech,alt.atari,comp.sys.atari.programmer,comp.sys.atari.st,comp.sys.atari.st.misc

Where can I find a ROM dumper utility for an Atari 1040ST?

I have downloaded Gemulator and I also downloaded 2 versions of
the Atari ROM- 1.4 and 2.6 from
http://www.lgd.fatal-design.com/. All of which work fine with
some Atari programs but I'm having no luck with Megamax Laser C
which crashes my Pentium.

So, the author of Gemulator suggested getting a dumper utility
to download the ROM from my own 1040ST which still works.

NO YES

> Anyone know if the CT2B board has any better Y2K compatibility over
> a Stock Falcon or other Falcons with hardware upgrades?
> I've not ran into any Y2K problems, but am curious about this.

Thatï¿½s not a question of the CT2 Hardware, itï¿½s more a question over the
used software packages. I had no Y2K defined problems here, only older
software, like THE_DOT, UPOINT and some other missmatch the date they
got for hardware clock. Otherside, i had an external clock (DCF77)
connected to my machine, so the time is equal, for me ;-)

All programs use that "atomic" driven time ;)

Works, but the fitting is an overhead..
Needs extra hardware in form of 74LS00. Needs longer floppy cabel.
Need to split some wires. The hole bus is connected 1:1 (no DS1)

DriveSelect 1 Signal comes from sound chip, isnï¿½t connected to floppy
bus. DS1 needs an generator (74LS00)

Useless, to many solder work only for an extra floppy drive.

DOITF030 contain that smal ciruit.

Those are ordinary RS422 ports. Using a Mac printer cable, you
can run a null-modem connection with STiNG or MiNT-Net.

Assuming you didn't specifically select Serial2, your MEGA/STE
should default to LAN at bootup. The Falcon works as is.

In both cases, you should run Fast-Serial or HS-Modem from the
AUTO folder, to patch TOS' serial routines.

I seem to recall Superboot being one of the problematic booters.

>
>After writing a follow-up post, I watched the screen as my computer
>connected to the newsgroup, and it didn't say "sending news" as it
>usually does, before it downloading new post. A look at the offline
>postbox then showed the Q had changed to a S, but it hadn't been sent.

1) Check you log file immediately when this happens. Or when you exit NEWsie read the log file saved to the desktop.

2) Since you are using .96 you can edit the POSTS.PBX file with a text editor. Change the "S" to "Q".

3) If it isn't uploading, you may discover that some servers don't send posts where the quote is much larger than the reply text. This will show up in the log file.

4) Look in you POSTBOX folder and see if there is anything out of order with the files still inside.

5) Delete any excess unecessary posts that are still tagged SENT.

6) This will give you a start on trouble shooting.

7) IF it doesn't send again. Check your <references> in the header for anything that looks out of order.

8) Remember you are using the beta. The postbox feature is new. There may be a quirk or two. If you can repeat the problem and find some Idea as to why it occurs, then let John know to the best of your abilities what you can describe. Hopefully it can be rectified before the official .96 release. I have had a few problems with the offline postbox, usually after a crash when NEWsie is loaded and doesn't exit cleanly.

9) I am not certain which is worse. Having a post queued then sent but really not sent, or having a post queued, then sent, then not unqueued, then sent again, (Repeat 6 Times:-), until you manually change it to an S or Delete it.

>Other people seem to have been suffering from this problem, but
>thought it was the fault of the Provider.

With version .94 you wouldn't as easily notice the problem you have described. Because the files are deleted after being sent. So you would need sharp eyes on the modem and if you missed it, you need to look for your posts.

However, many things occur.

1) Post is uploaded. I don't receive it in my own downloads. Everyone else gets and sees the post. I won't know if it was posted unless someone replies to it.

2) Post is uploaded. I receive it. Others don't while some others do.

3) Post is shown as sent via NEWsie .96 S feature in offline postbox, however the log file shows the post was interrupted and not sent.

4) Post is uploaded, not scene by virtually anyone, however it can be found on Deja NEWs. Check Deja when looking for missing posts you think you sent.

5) Start using an comparable NEWsreader to determine if it is a NEWsie beta problem or a NEWsfeed Problem.

>Could it be at the sending end instead?

It can be this is what the log file can be used to determine. Especially as it gives the Number of bytes sent.

I have sent multiple copies of posts I didn't think got sent, and each time I could never receive that specific post in a thread while Others came through. But that didn't mean that other people didn't see this post and its many copies.

Message-ID: <5da_0001140936@conchbbs.com>
Source record: 67194

I had Hsmodem, Sting, Dialer, CAB & Newsie all working with my old PPP ISL (text logon), but when I tried to use a new PPP ISL with PAP, I get a 2 bomb crash (A2 contains a NULL) during the link initialization stage of dialer.

Has anyone else had this problem? Has anyone found a solution?

The readme says that he never actually tested the PAP feature. Is there a newer version where someone HAS tested the PAP?

FamilyNet HQ: Telnet:\\209.217.2.202

> From: Greg Goodwin <lady-aramis@geocities.com>

Greg,

Per your request, have set up both Atari Newsgroups on the Dallas BBS, anyone in the Dallas area with an Atari could theoretically dial in (972-496-0650) and access these two newsgroups, as well as the two counterpart echoes in Fidonet.

If you are having problems connecting (I am still building this system from scratch) or have found another way of accessing, I understand. No problem, I will continue to port these newsgroups into the BBS.

All participants on this BBS also get an automatic free Internet E-Mail address to do Internet E-mail with (possibly a good benefit for Atari Users).

Also available as:

telnet://209.217.2.202
http://209.217.2.202
nntp://209.217.2.203

Have a good one...

Bob

>many people. The main other option is Jinee.

Pardon, no desktop with N_AES? Every N_AES package comes with a special
Thing (only runs with N_AES). N_AES 2.0.0. holds Thing 1.27b which is a
bugfixed version of Thing 1.27.
You can use Jinnee too.

Geneva is another possibility. Although I never could it get working
properly lots of people are using this. In combination with the
replacement desktop Neodesk (from the same software house) it forms a
very stable and quick mulitasking system.

MagiC can be use too.

I can understand why Laser C crashes your emulator. Compilers are
usually very designed very specifically for the architecture. Is there
some reason why you would want to run your Laser C programs under the
emulator?

** OFFER : Buy #10 pounds worth of gear and get any single game FREE

List of Productivity Software/Hardware : (#7 each + shipping in pound sterling)
---
* STOS Maestro Plus (Hardware Sampling cartridge and software included)

List of Compilations :(#4 each game + shipping in pounds sterling)

** (ALL BOXED + MANUALS + ORIGINAL DISKS) **
* Giants
(includes Outrun, Gaunlet II, 1943 and Street Fighter)
* Quatro Sports
(includes BMX, Italia 90, Advanced Ski and Pro Tennis)

List of Games : (#3 each game + shipping in pound sterling)

(ALL BOXED + MANUALS + DISKS)

* Baal
* Batman
* Deja Vu
* Driller
* F-19 Stealth Fighter
* Falcon (Game + Mission Disk Vol 1)
* Galdregons Domain
* Ghouls 'n' Ghosts
* Gods
* Gold Rush
* Heimdall (1 Meg)
* Hook (1 Meg recommended)
* King's Quest II
* King's Quest III
* Quadralien
* Leader Board (Game + Tournament Disk Vol 1)
* Lotus Esprit Turbo Challenge 2
* Magic Pockets
* Midnight Resistance

* Midwinter
* Navy Seals
* Night Breed
* Operation Wolf
* Premier Manager 2
* Rick Dangerous
* Robinson's Request (1 Meg)
* Shadow of the Beast
* Sly Spy - Secret Agent
* Space Quest II
* Space Quest III
* Spy vs Spy (Artic Antics)
* The Quest for the Time Bird
* Transartica
* Uninvited
* Zool

List of Games : (#2 each game + shipping in pounds sterling)

(NOT BOXED ONLY ORIGINAL DISKS + MANUALS)

* Another World
* King's Quest IV
* Leisure Suit Larry II
* Leisure Suit Larry III
* Operation Stealth
* Police Quest II
* Secret of the Monkey Island
* Storm Master
* Street Fighter II
* The Godfather III (Action Game)

List of Games : (#1 each game + shipping in pounds sterling)

(NOT BOXED, (1)NO MANUALS, (2)ONLY ORIGINAL DISKS)
(1)Manuals are not really needed to play these games anyway
(2)Original Disks, we do not sell pirated software,so don't even ask.

* Alien Syndrome
* Crystals of Arborea
* Hard Drivin'
* Indiana Jones and the Last Crusade (Action Game)
* Oil Mania
* Panza Kick Boxing
* Rock 'n' Roll
* Silk Worm (Boxed but no manual)
* Spitting Image
* Strider
* Trinity
* Trivial Pursuit
* Wrestlemania

>Yours
> David James

Correct. I guess I should have ordered the Compendium. However it misses many files currently on the UMICH site. I Purchased the Fast Club cd which I guess is the ST club, and it doesn't work on my TT & NEC Romdrive.

But I like the idea of a CD with the UMICH and Belgian sites combined.

Regardless. I think if the Umich Site goes offline, it would be usefull to have the complete archive as it existed upon its final days.

The only problem with CDs is that not everyone has easy access, as it has to be purchased. You also have to trust the person making the CD that everything is included.

Well, I guess I may have to order the compendium after all, just to have it in my collection.

Later Brian.

Yes, I remember this conversation when I had some troubles with my Syquest 270. This would seem to be the proper way to do things. And this was how I was doing it. However, I continued to have problems booting. Drive booted but no files shown.

So, I do it opposite. I take the mech out, like a floppy, and first turn on drive, insert mech, and things are fine. However this is what is working for me. The day will come when that spec of dust creeps in and Galen will say. "Told you so:-)".

Brian.

OK, Its the FTP site, and you can't access it via FTP. It may also be in a state of flux. So, I am typing this offline, I will check when I go online again. I am certain I used NEWsie to go to this page, but I am not 100% certain as I used to use FTP to get to the UMICH site.

Type in http://www.umich.edu/~archive/atari

Do this in the Special Menu where you can web browse. It usually defaults to NEWsies homepage.

Have you tried the belgian FTP site?

or any other FTP site for that matter?

So, I will check out UMICH from both CAB and NEWsie. It may be down, it may be gone for good, you may have made a mistake. I will let you know. We are keeping tabs on it as it is. Don't want to lose this site if possible.

Brian.

Don't have Mac or PC. No need to worry about changing progression just yet,
as its Web pages I am concerned with.

I can't understand, why the JPG overlay in CAB can't distinguish between
a JPG and progressive Jpg. One could be handed off to the DSP decoder,
(since its not updated to handle progressives), and the progressive JPG
could be handled normally, taking up much more time.

I don't like having to have one or the other with the Falcon. I either get
fast pictures, and some missing because they are progressive, or I get JPGs
decoding barely faster than the speed of my ST.

I did try to have both JPG overlays installed but this wasn't successful:-).

Correct STeve. Thanks for the information. Now if I could get that graphics card you have....

Perhaps its time you upgrade and sell you old card.

Both my MegaSTe and TT are graphic card deficient.

How does GemView operate with these. And What is the selection Motorala and Intel for? Is this support for Gemulator, or Magic PC?

Later Brian.

>Can the Moving Pixels Tina Turner demo be viewed on an RGB monitor, and not
>just the VGA monitor?

Um, I don't know yet. I have a CDRom connected to my TT. I can't seem to get it to work on the Falcon. I have a Syquest on the Falcon and can't get it to work on the TT. So I have copied the Tina demo to the TT hd. And am still trying to sort this out. I haven't even read the Tina doc yet. But I hope it works on the TV. I don't have the RGB adapter for the ST monitors, although I would like to get one. Actually a Switching system, like OMNI Switch or Monitor master would be really handy.

Anyone know of such a device for the Falcon.

I dislike plugging and unplugging monitors.

Anyways, I do need the RGB SC1224 adapter.

Olivier Bookage has a new version of his CABOVL beta available - 5.6700. A couple of bug fixes and a very noticable speed increase in downloading. Previously I was getting average download speeds of 5.5 to 5.8 kb sec when things were going well with my ISP - now its in the 6.4 to 7 range with bursts of over 18. This is with Sting/HSModem7 on a TT via a 56K US Robotics external modem.

Those who have not tried Olivier's CABOVL - you may want to give it a go. It does eliminate a number of stalls and timeouts that seem to occur with Dan Ackerman's CABOVL (also very good) under STing.

Hi there.

I recently cleaned out a few boxes that contained my Atari
520ST and some other peripherals that have been collecting
dust since the early 90s.

I've got:
Atari 520ST
SF354 floppy
SX212 modem
SC1224 monitor
1050 floppy (5-1/4", probably goes to the 130XE but,
it was in the box)
Assorted cables, power supplies and some games

I cannot promise *anything* works, so I'm not interested in selling them. I'd rather just give it to someone who can provide a good home, or at least be able to scavenge some parts from these.

If anyone's interested in the items mentioned (I'd prefer to
dump them all at once) and is willing to pay for the shipping
(I live in Virginia, USA), please e-mail me: pwerntz@vais.net

Thanks.

Preston

Greetings Brian,

I tried two that I found, and they didn't work. They run, but nothing happens. The programs are suspiciously short although they may be written in assembly language. One set of the chips I have in Germany is modified (we burned it to modify a few bytes in the ROM), and it would be good if there was a dump program around.

So what address do the ROMs start at, and how large are they? I'd try writing one as soon as I get my disks running.

Best Regards,

Mustafa Soysal

John, not having a Falcon I couldn't tell you. It "should", but if it is not on your set up you might want to e-mail Olivier and let him know.

I don't know who Dave got in trouble with (Apple?). IF it's them then they should GIVE him money, because he is probably responsible for many people going out and buying a real Mac after using Spectre (and then System 7 came...)

Hi John,

Yes they do work on single TOS. I have used the last several
versions from Olivier, and they all have worked fine. I have a
Falcon with single TOS 4.04, Nemesis, Warp-9, ICD harddriver,
Toshiba IDE, external Supra Fax/Modem 28.8 (flash-upgraded to
33).

Not necessarily directed at Steve.

Well I can tell you that it would be faster for me to stay on-line
and read the few posts that are worth reading, rather than to download
the entire new posts each day. Between all the emulation posts, ebay
posts, and advert posts, and stuff I just am not interested in, I
don't read much of it.

And I don't need Martin telling me how offline vs online reading works
either. I used to do offline reading.

I also don't think just because here it cost me little if anything to
be here that makes Americans spoiled. Perhaps your location has crappy
service or it's their intent to take all your money? Ever consider that?

This might be my last post on the subjest. I'm not sure, and you can
try and push me arround all you like. I can respond to each and every
post if that is what you want. I keep hearing it costs money yet
ther thread continues, I find that odd.

Okay... I've tried the PD HDBC HD Driver and it seems to be very buggy... locks up when I access my Syquest Drive more than 2 directories deep... I keep thinking that since this is the HD that the TT came with that the Atari HDX that came with it should boot the HD.. but it won't! I don't know why! I install the boot driver and it won't boot from the HD... I am waiting for my HDDRIVER 7 to come but I want to get this puppy up and running! Any thoughts? You guys have been extremely helpful thusfar!

Bruce

>in HTML coding afterwards.

Vcards are only useful if your mailprogram updates it's address book
automatically. I think (and hope?) MyMail does this.

Okami displays the html parts by launching CAB so you can read the
actual message and not only the html source code. Works beautfully also
with single TOS!

>I subscribe to other newsgroups and anyone posting in HTML gets politely
>told not to and if that doesn't work - charcoal grilled both in the

Is it not strange that the major freeware mail/news readers (OE, NS) on
the pc by default are setup in a way that "puts" anger on there poor
ignorant users. Maybe things will get better now as Bill Gates has left
the vd chair at Microsoft to start coding again...

This "clock CPX" must be a separate .CPX program as afaik Xcontrol
can't do this by itself?

>
>NB Your STE will also have a problem with the XBIOS clock which can be
>patched, so to make the clock CPX work properly you'll need to install
>the Linkweiler y2k patch as well.

It seems that this XBIOS bug mostly strike on only STe's with TOS 1.6n?

If I remember correctly in TOS 1.0, 1.2 without realtime clock the
system always reverted to -85 and -87 something (TOS date) after a
reset. To retain the correct date/time you needed a special program
(like Superboot) to read the time from the keyboard processor as it
survives the reset. The XBIOS call to do this and/or the keyboard clock
has the y2k bug.

Does this mean that TOS 1.6 without extra software did keep the time
after a reset by reading the keyboard clock all on it's own?

All my Ataris rolled over and retain correct date after a reset just
fine: TOS1.4 Stacy, TOS1.4 Mega2 & Mega4, TOS2.6 MSTe and TOS3.01 TT. I
have no battery in the TT so it shows -89 when first turned on.

Does this mean that TOS senses the realtime clock if present and uses
it instead of the keyboard clock on bootup?

>it and delete those you don't care about.

Actually Newswatch can be set to download all new message headers in a NG so you can select the messages you are interested in later. When checking the the headers in Okami you can easily "mark" those posts and on next logon Newswatch will retrieve these messages by ID.

This does not speed up things very much though, as the complete header is usually just as long as the actual message. Really only useful for NG's with lots of binaries.

This is where the pc comes in handy :-) Outlook Express uses a different method only getting "partial" headers or something (havn't checked the actual newsserver command) that downloads really fast. Typically 200 messages in less than a minute or so. Makes it possible to check for interesting discussions in rec.autos.tech without raising the telephone bill too much and at the same time filter out boring articles on Ford Taurus warped brake disks :-) And this is with the pc slaved to my TT's Modem2 at 38400 so it's not a question of different modem speeds.

And actually only year 2000 is affected! Next year it will show 01 in the file selector. Maybe he stole the sorce code from the HAL9000 development team :-) We'll see in 2010 if the file selector tries to take total control over the system and owner.

>
>Honestly, if he played his cards right, he might be able to catch
>some of N.AES's market, in countries where it is hard to find.

Geneva/Neodesk is still _very_ useful. Very stable and compatible with STinG, CAB, Olga, Bubblegem, etc. The only "standard" program I know of that can't be used with Geneva is Okami. Jos den Becker has put in a check for the "Gnva" cockie and Okami will not run if found. The reason is a nasty bug in Geneva when a GEM program launches a TOS program and will after some time result in a total HALT and coldboot.

If you know exactly what you are doing _and_ eliminate the cockie Okami still can be used perfectly stable with Geneva. Also in the latest betas some of the dialog windows do not respond to mouse clicks anymore. They can't be topped or moved etc. This happend after beta-09 but can be avoided too, so I'm still running my prefered setup...

But this probably will not bother a dedicated Pine addict, as it is known to run stable with anything except a chainsaw. But be careful! chainsaws are as common in Finland as are competitions in axe-throwing and wife-carrying :-)

Or as Linus Torwalds says(?): "Where do you want to carry your wife today?"

Source record: 67094

Steve,

Brian has moved the Fast Club CD problem to private e-mail so this thread need not continue any further. However since you downloaded it already, please read on.

It occured to me that whilst you are complaining about 1 post from me that was 3k, it was Brian who posted a 1k file to the thread intially when only 2 lines of it even pertained to the Gemulator, which was what he was refering to. I too can sit and nit-pick a post as well. Since I have the entire thread saved I went back and looked. You let that slide though. Sorry Brian I had to note that.

It also occured to me if you are indeed reading this NG offline then you are downloading your own posts. So with that said, you are wasting your own money as well. You accused me of wanting to read my own posts. That's hilarious at this point.

You never did atempt to help Brian so I assume you just read each and every post since you downloaded the entire thing just looking for something to complain about, even if you are not interested. I often see huge threads about absolutely nothing, I could list examples, but apparently those don't bother you at all. Just mine for some odd reason.

Yes I could make things easier for people with crappy service. Maybe I made a mistake, or it was an accident. I definately did not do it on purpose, I rarely post at all. However you could not politely convey your thought, instead you had to be vague and smart mouthed about it. You know a simple "please do not quote large posts" would of sufficed. I guess that was way to easy.

Ultimately it would have been more cost effective to just "let it go" as I really don't think anything further was going to come from the original topic "Fast Club CD". Then you would not be reading this now. Same applies to those that decided to jump in.

I also want to say that you come here of your own free will. No one makes you come here and so you take on the risk what might be posted. Same applies to me.

I am not going anywhere, unlike kellis I won't be run off. Don't worry about that. I was going to start filtering you out however I felt more like giving a lecture. I think now I have made my point.

One final thing. I am willing to let it go, always have been but I will not let attacks go unanswered. I am quite aware that I have

requoted every post to this thread, why? Should be obvious why. I
will not stoop to name calling but I do like to play games.

891. Harlekin:Good news or bad?

Newsgroup: comp.sys.atari.st
Date: 2000-01-15 00:00:00 UTC
From: george@moulder77.freeserve.co.uk
Message-ID: <85odnl$3jd$1@newsg1.svr.pol.co.uk>
Source record: 67134

The good news:

Thanks to Joergen Bak I have managed to contact Hasse Wehner, now the sole holder of the copyright of the Harlekin program.

The bad news:

He hasn't done any upgrading for some three to four years, and is now really out of touch with the program to the extent that it would take him some time to become familiar with it again; time which, with his current commitments, he doesn't have to spare.

The possibility for the future:

He is justly proud of what was acheived, however, and is prepared to make the source code available with the Mac computer in which it is stored at a realistic price for both computer and software. He insists the two must go together, as he hasn't the time to sort out the files on the hard drive and pass on the source code as a separate entity.

So..... Is there anyone in in the Atari community sufficiently impressed by Harlekin who has who sufficient knowledge, ability, time, and interest to take on this task? Given that the number of Atari enthusiasts is decreasing all the time, it is unlikely that there would be a profit in it, and hence further development would be a labour of love and pride in an excellent program brought up to date.

I can give details of how to reach Hasse to anyone with a serious intention of accepting this challenge; I only wish I were capable.

George Moulder

John,

I am using all of STING's latest uploads along with HSMODEM7 on my TT
and am using a PAP with no problems at all. Could this be a problem with
the buffer settings in HSMODEM7?

Aha! Come to think of it, If I tried to set the buffers to max (65534 I
believe) It gummed up the works. Instead (for laziness) I use the "u" (auto)
setting in all the buffers (sets for 256). This ungummed the works! Hope
this helps!

ONLY when you remain online during the newsreading process.

Otherwise, in offline mode, you have to download the whole
thread first, store it to your hard-disk, THEN sort through
it and delete those you don't care about.

In countries where local phone rates are outrageously high, such
as in UK, people cannot afford to surf all day long, nor to read
mail and news while the meter is ticking. They download mail and
news twice a day, respond to it offline, then re-connect to send
queued responses later.

AES 4.1 (a.k.a. MultiTOS) might be enough. It does colour icons and 3-D effect, plus multi-tasking. However, the desktop wasn't made with long filenames in mind, which might be a problem. I beleive it has been distributed along with KEMD, for a while.

Otherwise, there is the commercial N.AES, which several of us prefer, because it has several novelties that MultiTOS never got around to and is generaly more stable. However, it doesn't come with its own desktop. Thing is a favorite desktop for many people. The main other option is Jinee.

Both of the above run on top of MiNT. Note that you don't need a full Minix partition for this. Just put MINT.PRG in your auto folder and configure a few things in the MINT.CNF setup file (which goes to C:\mint\mint.prg usually). That's it.

Otherwise, you could also run MagiC, but Bengy is probably better at claiming the merits of this one than me. ;-)

Nice to know that, although Geneva is not _actively_ developped
anymore, Dan still finds the time to patch a few things.

Honestly, if he played his cards right, he might be able to catch
some of N.AES's market, in countries where it is hard to find.

Essentially, the OS developpers have left the hardware developper alone and since he doesn't feel capable enough to hack TOS or any other OS (e.g. Magic, MiNT, Linux) to run over his hardware, he is giving up. The only good news is, he has offered his designs to Milan-Computer to produce an entry-level TOS machine with an even lower price tag than the Milan and apparently received positive feedbacks. Some issues remain unclear as to who owns Rodolphe's hardware designs, because Centek was owned by an investor called Class4.

Good idea. Actually I prefer MOUSE_ON.PRG because it doesn't leave the VT52 window open in the same way as MSCON.TOS does. I have found that even with the cursor hidden, I can access MagiC's 'start program...' menu entry 'by feel' so to speak, and run one of the above, but obviously an F-key is quicker and easier.

Now *that's* bull***. None of the dealers I've contacted (this includes
Woller Systeme and a.g. Computertechnik) have even bothered answering my
questions re. N.AES. If you don't speak German you can forget about
getting a legal copy of N.AES - it's simply not possible.

Source record: 66953

Hello dear atarists,

I would like to plug my STE to the "composite video" input
of my PC's TV card. I can do it with my Falcon because it
provides PAL output, and I've made a little interface
myself.

But it seems the STE video output is a bit strange...
it's not PAL, it's not NTSC, it's not SECAM... so what
is it ? I perhaps need a video amplifier because I
think the composite video output of my STE is a bit
weak... So what can I do ?

(I just want to record the best ST demos to a CD-Rom,
in MPEG format, on my PC ;->)

Konstantin Woller _has_ answered my e-mails and I don't speak German. In the first e-mail, he said that Joe Connor did the English version for him. I still haven't received my N.AES 2.0 cd-rom, though.

Axel Gerhinger is indeed known not to answer foreign mail but, having spoken to him over the phone once, it is clearly because his knowledge of English is almost non-existant.

Yes, evidence of hardware design experience (ask anyone
who went to the two recent Atari shows in UK and Germany,
where the Phenix prototype board was shown, as well as
the several hundred CENTurbo users), not evidence of OS
development.

Hi Mario,

MB>Then how can we get Tele Office
the software was being sold by TKR in Kiel, Germany. I don't know if
they sell it still. The last price was 10 DM for a CD that contained a
lot of data transfer programs for ST, Amiga and PC.

Write to carl-michael_ewert@of2.maus.de for more information for he's
the man who obtained the source codes and who made the patch.

MB>and does the patch also work with Junior Office?
No, for the binaries are totally different and he doesn't publish the
patch but instead asks anybody interested in it to send the binary to
him, and afterwards returns the patched version.

He just wants to get an overview of how and who many use Tele Office.

Und TTschï¿½

I had Powermonger for the ST, but I didn't like it at the time and the disk & manual long ago disappeared. Though I have the box somewhere :-) The graphics and sounds were really rather good, but I didn't think much of it compared to, say, Populous. If you're into the Dune II/C&C type of game, you might like it. Certainly, it got good reviews at the time (I think?), and several of my friends played the Amiga version to death and liked it a lot.

If you want to try it out before buying, you might be able to find a PC copy on an abandonware website. A friend of mine used to play the PC version on his IBM PS/2 (12MHz 286, MCGA, 1MB RAM) so you don't need an expensive PC to play it; it might even run under PC-ditto. It might also be on an Automation (D-Bug, Pompey Pirates, whatever) disk somewhee as well. Getting a copy of the manual is recommended, though; from what I remember, the game doesn't make much sense without it.

Check your ST's TOS version. If it says 1985 it's 1.0, 1987 is 1.2 and
1989 is 1.4 and download the same version. Really no need for a dumper
utility as most TOS versions are available.

Start the emulator in "Atari disk mode" and set it up to boot from
floppy and in monochrome. Now put in your normal boot floppy from the
real ST. Keep any original floppies writeprotected as Win-95/98 also
writes to the floppy when reading (SIC!).

If this does not work then you are probably out of luck. Gemulator 2000
is generally very good but you may also try a more "games oriented"
emulator. Sorry, I don't remember any names.

Hello,

I've got some stuff I want to get rid of:
SM124 (8x): 10 euro
SM125 (1x): 12 euro
1040 STFM (4x): 12 euro
1040 STE (1x): 25 euro

And if the offer is high enough, I would even consider
selling my Atari TT with 60 MB (or more, I don't really
know..) drive.
As you can see this is quite cheap... And it can be even
cheaper if you intend to buy more than one thing.
The only problem will be that I live in the Netherlands,
Nijmegen to be precise.

greetz,
Kasper

Hello all!

I just got Magic 6, and I've run into a little problem with Sting. With the exact same Sting setup I use in Geneva, only with Magic running instead, I get a "Passing connection to Sting failed!" dialog after the dialer connects. Now I know that Sting does work with Magic, as I've seen a number of people talking about it, so what the heck am I doing wrong?!?!?! The documentation with Magic is pretty thin and doesn't cover much except the extreme basics, and the Sting documentation I have is even worse! Any help would be greatly appreciated! Thanks!

On the Hades the three OS's runs once setup properly without any major
problem. IMHO the best OS for the Hades 060 is freeMiNT/N_AES.

Since Bengy is currently offline, I'll do the honours.. ;-)

>>Looking for some input on which AES replacement is the best to use on
>>a TT030 w/4ST & 4TT ram.
So far, several people here have advised you to take the MiNT route, and without even asking what exactly you want to run or use it for. What they forgot to mention is that MiNT in combination with N.AES is quiet memory hungry.
When choosing a OS, one should make a wishlist.... there is no such thing as the perfect OS, they all have their plus and cons.
MagiC is commercial, easy to setup and maintain. Most of the commercial software is programmed to use the features of MagiC to reach their full potential. Since most of the commercial software is released by ASH, one can be assured this will remain so for future releases. N.AES has been playing catch up lately and the last version is "Magic compatible" now. But to put it in the words of Coca Cola "nothing beats the real thing". MagiC is available in English with a English manual, every Atari dealer will be able to order it for you. AFAIK the complete N.AES package is only available in German with German documentation. And it's not really easy to get hold of either.

In general MagiC runs smoother and has a better graphic appearance. To install the package you only need two mouseclicks and reboot the TT.

You should really give us a bit more feedback, when choosing the ideal OS it's important to know what you intend to do with it, what kind of programs you are using or thinking of using. Are you going to network the TT with other computers or use it as a stand alone computer? How much are you prepared to spend. Most importantly what do you expect of the OS?

Cheers from Belgium
Dennis

>lately, it would come in handy. And I realized that I don't have one -

>at least one that works under MagiC 5 on my Falcon.
>Ideally, it should work well with CAB 2.7 as well.
Basically, any modern pogrammed spooler will do. I you use NVDI 5.xx you already have one, and it's one of the best around. Select background printing in the Printer CPX.... that's it... and it's ideal for CAB too.

If you don't have NVDI 5.xx then I recommend Spooler 2.0 from Andreas Mandel. It only takes up 4Kb memory, and comes with a very easy to configure CPX. Although it looks very simple, it's one of the most versatile spoolers for our platform. I haven't the faintest idea where to download it from, but I do know it's in your mailbox now ;-)

If anyone else here likes a copy of this spooler, please send me a PM and I'll oblige....

There ought to be a facility on the HD program which says 'Install
Hard Disc Driver' (or words to that effect). Click on that and then
select the drive to install it on - normally for a hard drive that
is Drive C.

>
>Brian.

Hi there are several versions of Star Trek, even a 25th anniversary
edition. They all are based on a grid and have to war to the destination
etc...

The 25th edition has given it a face lift and you now have some nice
graphics, instead of a grid of dots etc...

There was a commercial title, Star Trek 'The Rebel Universe' which came
with a sew-on patch. This is a completely different game, and is more of
an adventure, and reading the manual does help:)

Hi,

I have just downloaded version 0.25 and installed it on my Milan but
it suffers the same problem as 0.23.

When setting the date/time the date field appears blank and anything
that is typed does not appear. The date can be set it is just difficult
since nothing appears, not even the separators.

The time field isn't affected.

Update on my problem...

I discovered that Fast Serial didn't like Magic. I was using Fast Serial because HS Modem didn't want to work very well for me with Geneva. I tried it with Magic, and everything's ok now.

One new problem: CAB 2.7 demo will only show partial pages (usually the last few lines) of downloaded html. For instance, I went to www.atari.org, and the top of the page started with a screwed-up version of the "Star Trek Women" vote, with the Pacman animated GIF, and a few other things, but the majority of the page was missing. This happened with most pages I tried to download, but not with the ones I have offline. It does seem to download the entire page, and it sits at "Prepare Formatting..." for quite a while before showing the partial page. I'll try messing with settings and changing CAB.OVL's to see what I come up with.

>gap ? :-)

You and me are one of the lucky guys who managed to get Wensuite working.
The most however are just unable to make a connection. I know a few guys in
Holland who has tried almost everything they know to get that thing
working. Alas they still can't use it.
The weakest point of the whole Wensuite concept is the dialer. Why has
they developed a new almost unusable stack instead of using STiNG or
MiNT-net? Both works flawless.
If one read the docs STing is rather easy to set up. Wensuite looks easy
but it isn't. The dialer part holds too much bugs and one must keep in
account just too many things.

I haven't tested the news part throughoutly to tell more about. The mail
part is alas (at least in my case) only usable to retrieve mails. I, and
lots others are in the same case, still can't send mails with WS.
Despite this all I believe that this package has some future. At least the
browser part is more stable then Light of Adamas, which is still a real
disaster.

>or you can enter the IDs manually.

Hi Uwe.

No problem I confuse at the best of times. In this instance I am going on memory. I got my Falcon and it came with HD Drive 5.** and a 6. upgrade disk that still wasn't installed.

The machine was configured with an 80meg IDE drive with 2 partitions C & D and a 270Meg Syquest Drive.

Unfortuneately I couldn't get the 270 to be acknowledged even the previous owner said it should work as he had been using it for a few years and the cartridges where filled with files and such.

So I read the HD Driver Manual. I am afraid to touch HDs, because I don't want to eliminate stuff by accident. Anyways the manual was so good, that this rookie took it upon himself to reformat the 270meg cartridges.

I used ID check and the syquest was detected. Then Booted HD utilities and partitioned the syquest into two 135megs which became E & F.

Now, Just because I read, doesn't mean I don't make mistakes. So I used the Auto Configuration, and it scanned the SCSI devices. Of course only detecting the Syquest as that is all there is attached.

I then saved the configuration and rebooted.

Well, imagine my surprise. And what is important here is that I did talk to you and you did get me through my error. The driver only acknowledged the SCSI 270 Syquest. Well not exactly true as it booted off the IDE drive as that is where the boot strap was located. But the IDE drive partitions where gone from the desktop and the 270 became C & D. I of course thought that somehow I had deleted everything from the IDE. So now I had blank 270meg cartridges, but at least they worked and a missing IDE drive.

So, long story short, is that I manually installed the IDE drive and resaved the bootstrap. And all was well once again.

If the manual had not been so clear, I probably wouldn't even mess with my HD. But even with a clear manual, mistakes can be made, and novice users have a tendency to misunderstand just what they are reading, even if they think they got the idea right the first time read.

So, thanks for your help. No to tech to follow up on things once again.

Brian.

Hi Peter!

PS>I have just downloaded version 0.25 and installed it on my Milan but
PS>it suffers the same problem as 0.23.

Then it's _not_ the 0.25!
On my Milan (with MagiC-Milan), the 0.25 has no problem setting the date.

Baring in mind it was only displaying a chessboard, I can testify that you personally could have demonstrated something more impressive. <G>

Okay... more questions for the Milan team:

~ What is your progress on hardware supplements? Can we currently watch DVD movies on a Milan?

~ Did you get permission to use the Atari name?

~ Some of us are very anxious to get our hands on a Milan II. Have the expected release dates changed (especially for US distribution)?

Andy

It states this because this is what Atari stated initially. It might be
caused by the fact that the real time clock in the original Atari
hardware was limited to a certain date range...

Please do email me the file, thanks :-) (as a zip file if possible,
because I'd need to transfer it via the iMac and wouldn't want to risk
corrupting it)
Not got a Falcon floppy disc as none came with it.. then again, it is a
second hand machine. Thanks Chris.

I don't understand the behaviour of Axel. I bought my Hades there so I
expected that beeing a customer of him he would reply to my mails. He did
that a few times but the last months my mails remains unanswered.
Sure his knowledge of English is very poor but he knows very well he can
answer me in German.

Indeed, the prototype board was shown on both shows but that's all.
Besides a monitor which displayed a chessboard motif there was nothing to
see at all. The reason for this (according to Rudolphe Czuba) is that the
Phenix operating system, Dolmen, was still not ready.
I just wonder how compatible Dolmen would has been? My guess, not very
compatible.

Hi Steve,
Somewhere here I had an interference filter which clamped over the
monitor cable. Never needed it so I never knew if it worked! I don't have
digital TV but do have satellite and no interference from my Falcon
(unless the TV is close by).

984. Edit cursor under MagiC 6

Newsgroup: comp.sys.atari.st
Date: 2000-01-17 00:00:00 UTC
From: jfhaslam@zetnet.co.uk
Message-ID: <3883744d$0$153@news.zetnet.co.uk>
Source record: 66911

Hi all!

I'm running MagiC 6 and NVDI 5 on my Falcon. I'm having a problem with edit cursors in dialogue boxes. The problem is that the cursor which should look similar to the | character doesn't appear.

This happens all the time in Cab (v2.7) but not in Newsie.

Another problem similar to this is that under some programs (an example is the TriYahoo! yahtzee game) I can't seem to enter information into non-modal dialougue boxes.

With TriYahoo I'm trying to register the program, but nothing gets typed into the registration lines. It works under TOS, but due to it's copy protection under MagiC, the program thinks it's on another computer and puts it back as Shareware.

Can anyone help?

Cheers!

James

After re-reading all of Rodolphe's posts on fr.comp.atari news,
all I can find are contradictory statements.

First, when some poster suggests Centek combine their efforts
with Milan, Rodolphe says he will join them but downright offered
Milan his designs. Then, in another post, he says that he won't
give them anything, but he might design some graphic cards and
other components that _might_ be usable on the Phenix _and_ the
Milan. In another post, he says the Dolmen team left and he is
giving up completely, since he has a quite demanding dayjob so
now a smaller version of the Phenix might become his weekend
"hobby" project.

Quite honestly, I'm growing tired of his antics anyhow.

Rodolphe called names on just about _anyone_ who disagreed on
what should go into the final Phenix design, called those who
would choose a different CPU complete morons, those who would
install an LS-120 drive instead of a ZiP or nothing at all
complete ignorants, etc.

No wonder the Dolmen team left him. With such an attitude, he
did not deserve any other treatement.

From: John.Kormylo@7861.conchbbs.com
Message-ID: <8f3_0001171341@conchbbs.com>
Source record: 66913

Using Geneva's crash report, Pure Debugger and RAM_SCAN I've been able to determine the following.

The crash occurs in Super mode in some other TSR (not STinG), presumably HDdriver (by process of elimination). It occurs during a copy operation that writes over it's own instructions (unless they were already written over). Turning off the debug report from Dialer does not help, however.

I have removed all TSRs and accessories except for Hsmodem, STinG, Xcontrol (STinG internals only) and HDdriver, and the crash still occurs.

Remember, everything still works fine on another ISL.

I've tried emailing Peter, with no answer so far.

>Yes, however this is a pain in the butt.

Agreed 100%!

Quite a while back, Terry May and I were pushing for a version of CAB or
perhaps the CAB.OVL that could utilize both CAB_JPEG.OVLs, depending on
what type of JPEG was encountered (ie. use the DSP loader _unless_
there was a progressive JPEG, which would call in the normal loader,
followed by a switch back to the DSP loader).

It sounds simple enough, although I'm not sure if this sort of thing could
be implemented with the CAB_OVL.?

Dan?
Oliver?

>thats why I haven't registered yet). The few times I actually USE my
>Falcon and GEM-view, the DSP works fine. My GEM-view is unregistered
>for certain, as it keeps reminding me! :-/

You are correct Sir. I have just installed another copy of GemView
v3.17 and it indeed didn't require registering for the DSP to be used.

It was me that brought up the registration being required based on the
following extract from the "changes" file:

- [2.85]: (22nd September 1993)
o DSP-JPEG decoder will only be directed at the registered version of
GEM-View (Recognisable by missing strips on loading).

I have looked through all the more recent changes and couldn't see any
mention of DSP loading being allowed.

I think I had my registration codes before getting my Falcon so it has
never been an issue.

Sorry to everyone for any confusion caused. I haven't tested any
version prior to 3.17.

Rich.

No, you're confused. They're not talking of Phenix, but the
new machine its creator started work on (www.siliconfruit.com,
and the primary OS of RIORED is very clearly written on the
main page: L*n*x) while waiting for Dolmen.

>my PC drive.

By rights you should be able to read your Atari disks without any
problem!!! Well so I am told! I've yet to do a desktop format and get it
read via a PC on any of my STE's or my MSTE straight away:(

If I need more than the usual 720k disk space, extended formatting, I
format the disk as usual (9/80, 10/81...) and then put a MS-DOS
compatible boot sector etc. using a program; I use DC Format v3, you can
then use these disks without a problem.

If you have a disk with data on them then you should be able to just get
the MS-DOS bits put on.

An ideal way of transferring the disk would be to get the PC to format
the disks and then copy the files onto the disk.

One note if the disk you use has been formatted using a PC, use the PC
to delete or softformat the disk and NOT the ST! I have noticed a few
corruption cases.

You will notice you get some, what I call, phantom files! these are
courtesy of the PC, and have strange names like 'a0'... Softformatting
(quick format) using the PC will sort these out!

>other OS (e.g. Magic, MiNT, Linux) to run over his hardware, he
>is giving up.

It's not as simple as hacking an existing native Atari OS,
that would defeat the whole objective of the Phenix project.
Without Dolmen, you'd have to do some serious "hacking" to
make another OS conform to the hardware of the Phenix and
take advantage of its features to the full. Dolmen was
conceived from the start to be lean and mean, running on the
dual-SMP architecture of Phenix, and including a highly
optimised scalable real time multi-tasking DSP kernel. If
Centek wanted to create a plain TOS clone, it could have
arrived on the market much sooner, but offering what more
over your existing Atari hardware apart from being able to
run the same software at a greater speed?

The DSP potential of the Phenix design (the add-in DSP cards
would have been cut-and-paste from the motherboard, because
the DSP56301 offers a glueless interface to the PCI bus) was
intended to open up new and ambitious possibilities, not just
to speed up existing ones. That's not to say some extra speed
in our favourite programs isn't welcome, but how often have
you wished for something that isn't totally beyond the realm
of home computing, only just out of reach of your trusty Atari?

>The only good news is, he has offered his designs
>to Milan-Computer to produce an entry-level TOS machine with an
>even lower price tag than the Milan

That would be interesting, although I can't see what part
of Phenix could be used to help lower the cost of Milan.
Milan is a bare-bones design using off-the-shelf system
components that are already mass-produced (PCI bridge chips,
programmable logic chips), which are a sub-set of Phenix.
The technical merits of Phenix (CPU arbiter, custom audio
circuit, DSP sub-system) are all "power" extras which would
raise the cost, if anything.

In fact, I think you might be confused here. If you look at
the Centek web site, you'll see Phenix 260 no longer has an
audio/DSP system on-board. There is the possibility that
these will be transferred to a PCI card, so that Milan can

also use it, in place of the less advanced SoundBlaster
Value PnP it's currently using as an audio solution.

>and apparently received
>positive feedbacks. Some issues remain unclear as to who owns
>Rodolphe's hardware designs, because Centek was owned by an
>investor called Class4.

Rodolphe owns the hardware designs. The Phenix motherboard
was already designed by the time Centek moved to Class 4's
location, and Phenix 060 R2 (now P260) was developed
off-site during October and November 1999. Centek was never
owned by Class 4. Even after the current transition and
closure of Centek, Phenix remains the property of Rodolphe
and the guys responsible for designing the audio section.

1.6n?

I've been told it affects pretty much all TOS 1.x machines, and at least
one person has told me that he had the problem with 2.06 (upgraded on an
STE). The Linkweiler patch seems to cure it. It's not entirely clear if
TOS 2.x is affected in MegaSTEs (where it is fitted on its own, ie not
an upgrade) or if TTs (TOS 3.x) and Falcons (TOS 4.x) are affected.

> If I remember correctly in TOS 1.0, 1.2 without realtime clock the

clock
> has the y2k bug.

It's nothing to do with how the time/date is preserved during a reset
per se. See explanation by Clive Williams (link on my page).

> Does this mean that TOS 1.6 without extra software did keep the time
> after a reset by reading the keyboard clock all on it's own?

During patch testing I found I needed to power down to clear the clock
settings to ensure I got consistent results as something was remembering
the time during resets, if this is what you mean.

> All my Ataris rolled over and retain correct date after a reset just
> fine: TOS1.4 Stacy, TOS1.4 Mega2 & Mega4, TOS2.6 MSTe and TOS3.01 TT.
I
> have no battery in the TT so it shows -89 when first turned on.

Do these all have RTCs? Also, you may find that things look OK on the
surface but aren't OK in fact. See my page for a way to test this. I was
fooled for a long time because the date looked OK in Papyrus and
LEDpanel. The clock CPX is good at revealing whether all is well.

> Does this mean that TOS senses the realtime clock if present and uses
> it instead of the keyboard clock on bootup?

Possibly, but I don't really know. If you use an external clock
(cartridge or one built into an ICD adaptor) the time is read by a small
Auto folder program. I would *expect* TOS to recognise and use a
standard Atari RTC.

Possibly. Last time I tried Wensuite it crashed before I could configure
anything much. Haven't tried the latest version, but several people here
tried recently with no great success, and a couple experienced hard disc
errors as a result, IIRC.

The latter persuaded me not to touch it with a bargepole!

Hi Steve

>You want interference! My pc knocks out most of my digital TV channels
>and plays buggery with terrestrial ones; and it's the other side of the
>house!!!!

Are you using a set-top aerial?.

Then it aint well. Check the case screws are piercing the paint on the
case. Also check that you are in fact using an earthed supply lead.
You may have a problem with the sheiding on your TV coax.

Ive got 4 computers running currently in this room and the kids watching
TV, no sign of interference here.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

Really, my STE barfed as soon as i tried installing it.

Come to think of it, ive youve got an AHDI partition scheme then that is
all thats required.
Most folks with ICD, format/partition to ICD specs. If you had the
forthought to use an AHDI scheme then this is why youve survived.

Greetings Brian,

I had trouble with all of them on NT. Pacifist, Gem2000, Gem380, and
tosbox_108. Most of them say they really don't support NT.

I reported the "bug" and there was mention of Keyboard layout but this is
easy to change in win98,I think I have pressed every key + shift to find it
but with no luck,as for tos I think all Ataris had the | and \ in the same
place

Source record: 66970

Get the manual for the ste, it details the pinouts for the ste output.
There is a composite line and a ground. Take an rca cable and cut one end
off. Strip the wires about 1/2 inch, and tin them with a bit of solder.
The core on the rca cable gets connected to the composite line and the
sheild gets connected to the ground. A bit of playdough or clay will ensure
that the wires stay in the holes on the ste video output.

Hi there,

Steve wrote:
>
> The title says it all really... I'm sick off the black 'n white icons!
> :(
>
> Please help

Black and white? The only way B&W icons should >ever< appear on a TOS4.04
desktop is when you are using <16 colour mode, or if DESKICON.RSC is absent
from the root directory of your C:\ drive or boot drive...

If DESKICON.RSC isn't there you can find it on the floppy disks that come
with your Falcon. If you haven't got those I can email it to you...

If deskicon IS there, and you are using 16/256 colours, then something
aint stirring the kool ade! (Thats a different story, we'll get to that
later if the case may be!)

Hope this helps...

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

It should not matter if GEM-view is registered or not. I have GEM-view
3.17 unregistered currently (I don't use my Falcon much these days, so
thats why I haven't registered yet). The few times I actually USE my
Falcon and GEM-view, the DSP works fine. My GEM-view is unregistered
for certain, as it keeps reminding me! :-/

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

b.p.,
Just curious, what type of interference? I had thought there was
something wrong with my RF out (Falcon MKI) but found it was a PAL output
which is European. Here (USA) it's NTSC. Talk about inteference!!!! Hope you
get better answers!

Is there a way to convert my old ST Data on Discs to Windows, so I can read and work with it. Mostly text files?

1028. Re: Coverting St Disks for Windows

Newsgroup: comp.sys.atari.st
Date: 2000-01-17 00:00:00 UTC
From: Greg Martin <gtmartin@abmlimited.clara.co.uk>
Message-ID: <qsDg4.12780$IN.311536@nnrp3.clara.net>
Source record: 66981

You should be able to read in the text files just by opening them in wordpad, notepad (depending on the size of course), or MS Word.

If you are using 98 then double click on the file on the floppy and the default viewer will open them if it can't find an application applicable to the extension.

The only problem you might get is if the disks have been formatted in any special way?, if not you should be okay. It is advisable though not to write back to the floppy from the PC, just pick up copies, I have had problems sometimes with corruption after writing back to an Atari formatted disk with my PC drive.

Regards.
Greg

1029. ? Settime, Tsetime, setftime & Pure C on ST ? (119 years)

Newsgroup: comp.sys.atari.st
Date: 2000-01-17 00:00:00 UTC
From: Jo'ogn <juergen@tcpip-gmbh.de>
Message-ID: <38831A06.1BC60AED@tcpip-gmbh.de>
Source record: 66982

as i don't have a realtime-clock on my 1040ST (2.06eng)
i've written a little c-prg that reads out the creation-date of itself,
shows it on the screen (e.g. at boot-up) and lets me inc/dec the
date according to the actual day and sets an updated creation-date by
means of "setftime()" (to remember it next boot-time) this all works fine !

now i send this date to "Tsettime()" to set the internal GEMDOS date.
but e.g. 14.1.2000 on the file gives me 14.1.80, or 14.1.28 in
the xcontrol.acc.

even setting the xcontrol to 14.1.00 did set back the year to 1980/2028
after exiting an application.

even using the XBIOS Settime (all from pure c 1.1) doesn't sove this.
i had a similar tool runnig before 2000 and it worked !
it cannot be a y2k as it's just an offset to 1980.

furthermore i wonder why Tsetdate has 7bits for the year, but the
(german) "Atari Profibuch" states that year can only be 119 max !
where are the other 9 are left.

regards

Hi Lonny,

>I am not going anywhere, unlike kellis I won't be run off. Don't
>worry about that. I was going to start filtering you out however I
>felt more like giving a lecture.
Good, glad to hear this....
Too many people have left lately because of all sorts of reasons...
What the hell is going on here ? Where's that great famous group spirit
gone? The last three months we're all at each others throat, one single
trivial posting is enough to ignite the spark... if we continue like this
CSAST will be history in no time. We'll all be filtering each others
postings, until finally there's nothing left to filter anymore.. :-(

>I also don't think just because here it cost me little if anything to
>be here that makes Americans spoiled. Perhaps your location has crappy
>service or it's their intent to take all your money? Ever consider that?
Of course you're not spoiled, it's us Europeans that are dumb enough to
accept this crazy system of billing by the second. Every European phone
company makes billions of profit. It's not because we don't want to know
any better that you are spoiled.

If Fast Club would have used a decent blank CD instead of some cheapish
crappy shitty CD, just to make some extra cents profit, Brian wouldn't
have posted here needing some advice/help in the first place.

I suggest we all send our telephone bill to Fast Club. That'll teach them
using cheap crap. ;-)

Cheers from Belgium
Dennis

Bengy and MagiC Online are currently offline, he should be back within a
week. Right now he's working very hard updating the Magic online site.
He'll announce the new URL of MagiC Online here, one of the coming days..

In the mean time I suggest that everyone who wants a Milan II with English

OS and bundled software, goes to the Milan website and tell them... these
guys don't seem to realise that there's more in life then just German.

Cheers from Belgium

From: Janka Gerhard PSE NLT <gerhard.janka@siemens.at>
Message-ID: <388326BE.C8D52E35@siemens.at>
Source record: 66986

Some time ago I bought a used copy of "Advantage Tennis" from a
german supplier. It came boxed and with manual, all in a good
condition. The problem was (is), when I tried to start the game
it asked me some copy protection question and I did not find the
answer in the manual. When I phoned the company asking for help
they said 'used games come without warranty' but they would look
what they can do for me, but I never got any useful information.
So, can anyone help me ? Did I only overlook the right chapter of
the manual or is there an extra sheet which is missing ?

This is becoming typical of _way_ too many universities. Too bad.

At this point, I recommend mirroring the Atari section to CD and
uploading an "Atari section maintainer's notice" to the effect
that support is dropped and that the section might dissapear at
the college's discretion.

>Of course you're not spoiled, it's us Europeans that are dumb enough to
>accept this crazy system of billing by the second......

You said it Derrick, the British probably have the most taxes in the western world, I am suprised sometimes that the government hasn't reintroduced window tax.....crap I may be giving people ideas here <s>.

As for Lonny and the extra lines on his post, I think everyone needs a bit of a break sometimes, I enjoy posts from both Lonny and Steve, but we probably need to remember the following

1) People make mistakes, and it doesn't always need to be commented on, not netiquette maybe, but just old fashioned good manners, and respect for everyone that joins in here.
2) This newsgroup isn't life or Death.....starvation, war, racism should be mercilessly attacked and treated with contempt, but not people who leave a few lines on a message, especially when they are actually intending to help.
3) We better stay friends in here, because if not, there are not many other places Atari users/fans etc can meet.
4) There is always a nice way of Saying somthing, and if you can say somthing nice, don't say anything, people have enough problems without some faceless person a million miles away throwing around abuse, maybe we should all leave that to the teens chat pages......

I quote most conversations on the web chat pages.....

"i'll kick your head in" said kid
"Where are you ?" said other kid
"America" said kid
"I'm in germany" said other kid
"I'll kick your head in, and your mates as well" kid
"Ohh, ok then, I like Ataris" said other kid
"I fucking hate ataris, I'm really gonna kick your head in, you cunt."........................and so it goes on and on and on......;-)

Regards,
Greg

Good idea, I'll do just that and yes it's an unfortunate time for many to be jumping from The Good Ship Atari, when, what with bye bye Centek, the Milan 2 looks to be our only high end hope. IMHO Motorola are too hardnosed businesswise to have coupled themselves to a no-hoper, although they make Mother boards for a lot of computers. I'll still keep faith.

I work all day with a high end PC and all the latest software, very pretty, very fast, but I still switch on my Falcon/Magic/Magxdesk or my Milan/MAES/Thing with a sigh of relief -- only wish CAB were faster!!!

Hi there, I noticed your posts on the Syjet 1.5 gig drives. Thank you for the info about moving them etc.
I have 2 syquest 1.5 gig drives, one internal and one external. I have found them to be really good, fast and reliable drives, <except> for once when one of the cartridges went bad and I almost lost everything on it! But maybe, I moved
the drive with the cartridge in (doubtful) or maybe some speck of
dust got in. I have heard a rumour that the cartidges can go bad after a couple
of years, which is worrying, but just makes me careful to back up.
Other than that, they are really good, and if you use Magic 5-6 and HD driver
you can use the cartridge right out of the box (dos format).

Is this the one that generates an error whenever a mail entry
is opened to be read ? kmemory.c 1487 _kfree on Null ptr

>New version of MyMail 0.91 at my homepage.

I tried this version and the problem still seems to be there.
Also My Mail sometimes tries to access the A: drive when
opening a mail from the In box.

>
>http://www2.tripnet.se/~erikhall/programs/mymail.html
>
>If you find any problems with MyMAIL please let me know.

I haven't use My Mail much as it generates the kmemory error
on my Milan.

I have noticed other problems, when online My Mail disconnected,
then tried to dial-up and check mail. It didn't succeed.
The Newsie Address-list import didn't work as it didn't seem
to detect the TABs properly.

I keep looking for a better mailer than Newsie, I like Newsie
because it is simple and powerful but using address lists
is difficult.

My Mail looks very slick but I am always dubious of mailers
that put all the messages in a single file.

I tried A-Mail as well recently, it managed to download
mails but then refused to transfer them to the Inbox!

Infitra looks nice but isn't finished yet.

I haven't tried the ASH product.

Regards,

Peter

A very good point. It is important for the success of the Milan II
that it is launched in other languages at the same time or within
a month of the German launch.

An English version will probably cover the largest non-German speaking
part of the Atari World and a French version my chear up those who
had been waiting for a Phenix.

The recent change in the status of the Phenix project may be bad news
for them, it may set the project back but it must be good news for
the Milan II. With a limited customer base it must be better for us
all if the platform doesn't fragment too much.

Hmmm ... this will be hard work! The SLM804 (a page-printer) is designed to use the ST RAM to prepare the page image prior to printing. So, you not only need to emulate the printer interface but also the DMA (store-access) interface. Good luck!

Unless the where formatted on an ST. Any ST with TOS 1.0 to TOS 1.2 formats are unreadable by a PC. Format a Disk on the PC. Use a DSDD disk and select 720 from the menu. Or there are many Disk formatters that are for the ST that support the PC 720k format. You can find these at http://www.umich.edu /~archive/atari.

!! Well so I am told! I've yet to do a desktop format and get it
>read via a PC on any of my STE's or my MSTE straight away:(

Yes, this is true with ANY STe and only upgrade TOS on STs.

>If I need more than the usual 720k disk space, extended formatting, I

Correct. Found at the above URL.

>If you have a disk with data on them then you should be able to just get
>the MS-DOS bits put on.

>An ideal way of transferring the disk would be to get the PC to format
>the disks and then copy the files onto the disk.

Yes.

>One note if the disk you use has been formatted using a PC, use the PC
>to delete or softformat the disk and NOT the ST! I have noticed a few
>corruption cases.

Things are changing for certain as time rolls on and Windows and Newer 1.44 drives cause trouble.

>You will notice you get some, what I call, phantom files! these are
>courtesy of the PC, and have strange names like 'a0'... Softformatting
>(quick format) using the PC will sort these out!

These are the extended filesystem, I believe. I don't know any of this properly, however my impression is that each of these aOs is part of each individual file copied. I can delete these on some STs, and on others they don't even show up. And sometimes these files are the cause of corruption on the ST side.

Hope this helps.

>>Things are changing for certain as time rolls on and Windows and
>>Newer 1.44 drives cause trouble

The corruption is caused by the drive itself and not windows atall, you can only write back to 720 diskettes if the drive has a High/DD compatibility, and very few new drives have this ability, which is why if you have an earlier HD diskette drives you can perform writes and formats. I doubt few manufactorers make HD/DD write compatible drives anymore, as it probably costs more so is not worth it for todays market.

The actually difference between a DD and a HD diskette magenectic surfice not the casing of course), is only the oxide coating which allows a higher density of data to be stored in a smaller track. If you have a compatible diskette drive in your PC, then you can quite happily format for 720 or 1.44 on any unformated diskette, if not, you specifically need DD disks.

In very simple terms a DD diskette has a different sized head to a HD drive, so you can only be compatible one way, and thats in reading, if you write you overlay corruption into the track. It actually used to be very common amount PC users to cross format disks as people had so many different configurations, but this is becoming a rarity these days without compatible drives.

Best Regards,
Greg

My Atari is getting long in the tooth. I suspect it may die any day. Also, I did a lot with Laser C before my Atari hard drive crashed and rather than buy another Atari hard drive- it seems sensible to do it all on a PC in emulator mode- until I can learn MS Visual C++, then convert the programs written on the Atari for my consulting business. The author of Gemulator swears it works. Whenever I write him a message telling him it doesn't, he bitches that I dare complain while telling me- insisting that it works. What an asshole. I hope he's reading this. <G>

Hi,

I have two SLM804 printers gathering dust in a corner since I do not have any Atari system. I'd like to have any programming info available on those printers, especially the connector's pinout (I also have the SLMC804) because I want to use them on a PC. Maybe even write a Linux (or Ghostscript) driver for it.

Thanks.

>Ghostscript) driver for it.

Are you sure you can do this, I maybe wrong here, but didn't the SLM804 rely on ASCI and ST RAM to work?

Regards,
Greg

Message-ID: <38848c63$0$1400@news.sol.net>
Source record: 66863

Hello, I wish to ask how to simulate a mouse click with the keyboard.
I know how to move the mouse cursor without the mouse but not how to
make single and double clicks. TIA.
here is how to move cursor:
* while holding down the "alternate" key press an arrow key in desired
direction to make jumps
* while holding down both the "alternate" key and holding down the "shift"
key press an arrow key to move in desired direction by single pixels.
please tell me how to do single and double clicks for each button:

1068. Popup menus under MagiC

Newsgroup: comp.sys.atari.st
Date: 2000-01-18 00:00:00 UTC
From: ash@elysium83.freeserve.co.uk
Message-ID: <8622dm$b4o$2@newsg1.svr.pol.co.uk>
Source record: 66864

I've just got hold of a secondhand copy of MagiC5, and popup menus don't work in the Lattic C editor or the aFTP ftp site selection menu, etc, etc.

I seem to recall something about MagiC installing a lower version of the AES than is avaliable under SingleTOS on my Falcon, but is there a patch, or utility, that would enable me to access these menus fully?

BTW, in the light of recent events here, I would like to point out that this isn't a MagiC advocacy issue - I use SingleTOS and MiNT loads too!!! ;-)

Cheers,

Ashley

>costs more so is not worth it for todays market.

No it isn't the drive, unless you use a High Density disk in a double
density drive. All HD drives I've come across can use double density
disk as well as high density ones.

The drive can only write what is been told, so if the OS sends it dud
info it'll write dud info...

>
>The actually difference between a DD and a HD diskette magenectic surfice
> not the casing of course), is only the oxide coating which allows a higher
>density of data to be stored in a smaller track. If you have a compatible
>diskette drive in your PC, then you can quite happily format for 720 or 1.44
>on any unformated diskette, if not, you specifically need DD disks.

So someone did read one of my posts years ago:)))

Yep, the magnetic media is thinner on the HD disks and so you CAN get
track corruption using double density (720k) drives. I know many people
don't realise it. I get lots of people sending me their hd disks that
have gone bad, thinking that there isn't any difference. All it takes is
1 bit, even a timing mark, and the disks data is bad. That small
difference is enough to crash a game, lose those hours of compiling and
that all important essay or article.

My 720k drive in one of my STE's will not even read anything from a hd
disk, yet I do have an external drive that is not very fussy, great for
getting those awkward bit or two:)

>
>In very simple terms a DD diskette has a different sized head to a HD drive,
>so you can only be compatible one way, and thats in reading, if you write
>you overlay corruption into the track. It actually used to be very common
>amount PC users to cross format disks as people had so many different
>configurations, but this is becoming a rarity these days without compatible
>drives.

Like I said I transfer data between pc & ST & pc & ST, and the
occasional portfolio transfer, and pc ... all the time, and have no

problem the pc disk formatting or using a double density drive. You can even use an extended formatted high density disk to get that little more data across.

I'd love to get this rieble Ethernet card working!!! I'm going to be bald by the time I've done:(

I am able to get my hands on some brand new Atari/Amiga compatible mice.

Price is going to be around the ï¿½15 mark, but hasn't been finalised.

I'm willing to ship outside of the UK.

> Ghostscript) driver for it.

This cannot be done. The SLM printers don't connect to the parallel port,
but to Atari's proprietary ACSI port. They are designed to work with an
Atari only, since they use the ST's RAM. This was Atari's way of providing a
cheap laser printing solution.

There is a software solution that allows you to print to an SLM by using an
Atari ST as an interface. The ST must have at least 2Mb of RAM to run an SLM
printer.

In any case, it is probably not worth it. You'll be very lucky to find
cartridges for this printer, and the quality is not up to that of a modern
deskjet type printer.

```
The left click is Alt-Insert and right click is Alt-ClrHome. Pretty obvious
once you know it !

You'd better get a mouse fast! Pointers in the Quick FAQ:

Cheers I recieved that, I really need the actual program that partitions and formats the disk tho. But thanx for that, if you could find the master disk and send me a ZIP of it, it would be VERY VERY helpful.

Thanx again.

And the Amiga owners said Atari would die out.. HAHAHAHAAHAHAHAHA :)

>sarcastic messsages about how great his program is, with no help.

I guess you are using the free Gemulator 2000? If so I would not expect
any real support at all! And it is well known that Derek is not really
very polite :-) But his program is actually very good and free, so I
suppose he has the right to behave as he likes. And it's very likely
that your compiler is doing something illegal not (yet?) "covered" by
the emulator.

Actually I too had problems with Gemulator-98 freezing my pc so I had
to press the reset button. I did upgrade to the latest Directx drivers
7.0a (?) and the new Gemulator-2000 and since then it works OK.

Also the latest STinG (Atari tcp/ip kernel) no longer runs with
Gemulator. I think it's about the handling of serial in/out-put buffers
not behaving like on genuine Atari hardware.

The same goes for other [hardware] emulators like the Milan (aimed at
those who dislike discussions about emulators in the group!). Most old
programs works but some don't.

Are you sure this is not interference from a local station - possibly
Channel 5, if you are in the UK, or your VCR? The Falcon may output a
slightly different frequency to the STE. It can usually be tweaked, but
I am not sure if/how the modulator is accessible - ISTR it's in a small
sealed box to which the RF out socket is attached. If it's the VCR, this
should have an adjustment to change the channel or frequency of its RF
output.

You could try a bigher quality coax cable for the connection, in case
the interference is getting in that way. Try a very short one too, just
to eliminate it from your enquiries...

Hiya
I am able to get my hands on fairly cheap 1 meg 30 pin RAM. Is
there any interest in this? if so what is a reasonable asking price for
it.

I will of course test all memory I get and make sure it is of
suitable speed (100ns being slowest as I vaguly rember from my old Xtra
RAM kit.. I'll have to read up on that) I think the majority is around
the 70-80ns mark tho.

>MiNT-net? Both works flawless.

OXO Systems began working on WenSuite when Stik/Sting was still in its
infancy and only did SLIP. WenSuite was first released approximately at
the same time as the first PPP Sting -- which, if flawless today, certainly
wasn't at that time, was it ?

>If one read the docs STing is rather easy to set up.

I've read the docs a thousand times and still can't set it up.

>Wensuite looks easy
>but it isn't. The dialer part holds too much bugs and one must keep in
>account just too many things.

I don't know which bugs you're talking about. I, and many others on the
French newsgroup, don't have problems with the dialer. And what "many
things" are you referring to ? Let's be specific: click on "PPP Link..."
under the menu "Options", what do you see ?

- Connexion: enter your ISP's telephone number, login, password, type of
script (manual, none, auto), DNSs.
- Divers (Misc? I'm using the French version): IP address and that's all.
- Proxy 1 and Proxy 2: nothing to enter.
- Script: your script (if any).

And that's that. How could it be more simple ?

>I haven't tested the news part throughoutly to tell more about. The mail
>part is alas (at least in my case) only usable to retrieve mails. I, and

Yes, I've seen some users complaining about that on the French newsgroup.

> Thanks, Steve

If you're using only SingleTOS 4.04 then you may not be able to use
all of these icons. DESKICON.RSC has 33 icons, some are OK, most are
fairly dull. You can edit DESKICON.RSC, increase the number of icons,
make your own, import Windows 3.x style ones, using ICDRAW 1.42 which
can be found on ftp.lip6.fr/pub/Atari I think.

Usually only alternative desktops can use other RSC files easily...

Kind regards,

Chris Wilkinson, Christchurch, New Zealand.

Steve,

>I can format DD or HD on 1.44 floppies with no problem!!! (now it's
>getting baffling).

Yes you can, as its been mentioned the only physical difference between a HD and DD diskette (not the caseing), is the oxide coating, which allows a greater density of data to be stored on the disk. Problems can occur if you use different drives to write to the disk, and one of the drives is not dual standard, this will then write back into the sector, in the same manner as putting a square peg in a round hole, leaving other erroneous data in place, this effect causes data corruption, or in the worst cases, no access to the disk atall.

>All of my machines use AMI (American Megatrends), in case it makes a
difference.

Its highly unlikely, but who knows.

Best regards,
Greg

Steve,

Get yourself a cheap copy of delphi 3 or above, this will allow you to create CGI (Common gateway interface), and WinCGI - "programs" - I use this term loosely, or start tackling perl.

The only thing to remember is if you want to deploy them, you will usually need a ISP that allows you the rights to implement them server side.

Do a search on the internet for CGI, and I lie not, you will find tonnes of stuff on it.

Regards,
Greg

Try asking your bank for a Euro cheque book and card on
your personal account. Buying them individually from
a travel agent (for example) does tend to be costly.

There are a few ST emulators available but it seems that the most people seem to like Gemulator 2000 from emulators.com and WinSTon. To get Gemulator 2000, go to:

http://www.emulators.com

and follow the links to get the ST emulator. They also have an Atari 8-bit emulator available there if you are interested. The 8-bit emulator is available for DOS and there is a version for Windows 95 and above.

To get WinSton, go to http://www.lgd.fatal-design.com/

WinSTon works only in Windows 95 and above. WinSTon is freeware while Gemulator 2000 was commercial but recently the creator has made it available at no cost. Please note that for either one of these programs to work, you will need to obtain TOS. There are ROM image files that are available on the Little Green Desktop site that I mentioned above. For GEM work, TOS 2.06 is recommended but for games, you should get TOS 1.00.

Hi Andrew,

Drat! I KNEW I shouldn't have mentioned that flash upgrade, because someone might actually ask how to do it... ;-) It's been a few years, but I found some of my notes. You'll need to use a terminal program like Flash or STalker. If you don't have one, maybe you could borrow one, or maybe there are ones you could get off of an ftp site. First you'll need to find out what version of software is already in your modem. IF my notes are right - try sending "ATI3" or "ATI3=". Not sure if the "=" is supposed to be there, because in my notes I have MY version number right after it, so it could be referring to that number. Because there are two versions of software, you'll need your current version first. I tried going to the ftp site I originally got them from, but no go. Maybe you'll have better luck? Its: ftp.supra.com/pub. You could also try ftp.diamond.com I went to www.supra.com, but wasn't able to find what I wanted before I ran out of patience. Not one of the better sites if you're using CAB. If you don't have any better luck, email me and I'll send the upgrade file to you - I still have both of them. They are about 175k, so I can't post them without being burnt to a crisp because of it ;-) . I also have a helpful text file that I downloaded. It's only about 3k, so maybe I could get away with posting that one.

Oh- in case you didn't know, your modem's FLASHROM can be upgraded by simply sending the upgrade software to it using a terminal program. It's a FREE procedure you can do yourself.

You forgot to mention that there's some silly laws in the Netherlands also, one forbidding all Dutch cars to stay in their own country at the same time (there just ain't enough parking space for them), so there's always hundreds of them in Germany, Belgium etc.. And one that allows driving a car even to those who failed the test, they just have to attach _yellow_ number plates to their vehicles.

Just tested to read the time with xbios 23 on my Swedish TOS 1.4 Stacy
with original rt-clock. Booting from clean floppy I tested this little
GFA hack and everything was OK with the year showing up as 2000:

```
CLS
PRINT "Date and time reading from xbios(23). V. 000119 kennethm@tripnet.se"
PRINT
r%=XBIOS(23)
PRINT "Binary=";BIN$(r%)
second&=r% AND &X11111
r%=SHR(r%,5)
minute&=r% AND &X111111
r%=SHR(r%,6)
hour&=r% AND &X11111
r%=SHR(r%,5)
day&=r% AND &X11111
r%=SHR(r%,5)
month&=r% AND &X1111
r%=SHR(r%,4)
year&=r% AND &X1111111
ADD year&,1980
'
PRINT " Year=";year&
PRINT " Month=";month&
PRINT " Day=";day&
PRINT " Hour=";hour&
PRINT "Minute=";minute&
PRINT "Second=";second&
PRINT
PRINT "Any key exits!"
~INP(2)
```

Yes they all have original motherboard rt-clocks. Sofar the only y2k
problems I have seen here are directly related to when the keyboard
processor clock is read (Xboot) as the protocol for transfering the
year through the serial connection to the mainboard only allows two
digit years in BCD format.

>
>> Does this mean that TOS senses the realtime clock if present and uses

>Auto folder program. I would *expect* TOS to recognise and use a
>standard Atari RTC.

If my little program above fails on a ST with TOS 1.4 and without rtc
then it will be proven that TOS tries to read the time from the
internal rtc and if that fails it tries the keyboard instead.

If anyone wants a compiled version just mail me. It's 4368 bytes zipped.

Yes, Alt insert = Left Click
Alt clr home = Right Click.

Alt arrows equal the direction.
Alt Shift Arrows equals finer control of the mouse Pointer.

Well, The game is being put on the back burner like alot of games I may
like. I have the Game DDAY and I am really enjoying it, as well as Third
Reich and Substation.

>If you want to try it out before buying, you might be able to find a PC
>copy on an abandonware website.

Actually, I discovered that both Disks came with the game. I didn't see the
original game attached to the cover of the WWI package. Ironically, when I
opened up the updated WWI box, I see that the disk spring is broken.

I think I will pull off the metal cover and then Copy the disk before even
trying to stick it in the drive to copy. I have had it in the past where
the metal slider gets caught in the floppy. And it can be very difficult to
get out.

A friend of mine used to play the PC
>version on his IBM PS/2 (12MHz 286, MCGA, 1MB RAM) so you don't need an
>expensive PC to play it; it might even run under PC-ditto. It might also
>be on an Automation (D-Bug, Pompey Pirates, whatever) disk somewhee as
>well.

Poor lad, you should have given him an ST:-).

It is available as Warez. But I like originals. Sometimes the Menus cause
grief, and manytimes the games are incomplete or a bug exists in the crack.

Getting a copy of the manual is recommended, though; from what I
>remember, the game doesn't make much sense without it.

Amazingly enough the manuals come with the Game, but nothing in the update package. So, it looks as though I have gotten lucky. Or semi Lucky, I got a manual and a bum WWI disk. But Nothing I can't take care of.

Thanks for you reply.

Brian.

Hi Nicholas

I'm sorry to say that it happened to me on my Milan. While unpacking
Wensuite made a empty folder that couldn't be erased or renamed.
The only way to get rid of it was by zero:ing the partition. I think
that is the same error as they were talking about.

I've wondered myself why some of these electronic experts here haven't made a "nubus" adapter, or an Amiga adapter for the cards available on those platforms. Hell, sell the adapters, software and let the customers purchase the accelerators themselves. Seems like the Amiga with the 060/PPC/SCSI combo would be easier to adapt than building one from scratch in their garage like most of the Atari hardware has been.

IMHO

Hi there, I read in AC #16 that Calamus can print using GDOS or NVDI, which is good news if you have one of the newer printers that NVDI 5 supports.
Does anyone know if DA's Layout supports printing via GDOS? If so how does one proceed?
Thanks for any help,
Mark

1134. Please help with Magic, CAB and Sting!

Newsgroup: comp.sys.atari.st
Date: 2000-01-19 00:00:00 UTC
From: nameerf@flash.net
Message-ID: <llch4.5272$V84.255710@news.flash.net>
Source record: 66815

Hello!

I've posted this question here before, but haven't gotten much response, so hopefully this time around will be different. Is anyone adventurous enough to take this on? :)

My problem:

I just got Magic 6, and CAB (both 1.5 and 2.7 demo) with Sting doesn't work properly any more. After downloading a complete page, CAB only shows a small portion of the bottom of the page with some HTML garbage to the top of the display. It will only do this with online pages. If I save the page and go to it offline, it displays correctly. Since it displays correctly after saving it, it is obvious that the whole page is being downloaded, just not wholely displayed by CAB. Thus I can (or can I?) rule out HS Modem and Sting. They are aparently doing their job of pulling in the whole page. I've tried both Dan Ackerman and Olivier Booklage's CAB.OVL's and they both give the same result. This also doesn't happen with all the pages, just the longer ones that can't be displayed on the screen all at once.

Things I've tried:

1. Like I said, I've switched CAB.OVL's.
2. I've tried clearing the cache, and even deleting the entire thing and having CAB reconfigure it.
3. I've checked my cache sizes: 10Mb disk cache, 2Mb image cache.
4. I've tried all the settings in CAB, including display, proxy (with and without), cookies, etc.
5. I've taken everything down to as clean a system as possible with only Magic, Sting, HS Modem, CAB, and the appropriate CPX's.
6. I've changed port speed settings, etc.

None of this has solved the problem. Has anyone else seen this problem before? Does anyone have any suggestions? Thanks!

Update to below:

I forgot to mention that I've also tried changing buffer sizes in HS Modem, and that none of this happens under CAB. I also found out that after displaying this partial page, I can hit "Back", and the "Forward" again, and as long as it's a page that doesn't force itself to be reloaded, CAB will load it from the cache and display it correctly. Hopefully someone will help me find the problem! Please?!?! :)

Date: Sun, 16 Jan 2000 20:06:23 GMT

Hi Martin-ï¿½ric,

Well, I have been carefull, in fact very carefull not to step on anyone's toes. Unfortunately you seem to have a pair of very big feet... I've even tried to be objective, where is Kellis? Her replies at least were pretty informative, which can't be said of yours...

>Bull****.
>MiNT + N.AES alone is not hungry at all. Only running the full
>multi-user UNIX environment on top of it is.
Will it run in less then 1MB? If not it is memory hungry. The full MagiC installation including the standard desktop is happy with less. If one has only 6Mb available, every Kb is important. What's the use of having a multitasking OS, if you can't run various applications?

>> Since most of the commercial software is released by ASH, one
>> can be assured this will remain so for future releases.
>
>Bull****.
What's left apart from Invers and ROM? If you buy a commercial release you have 80% chance it comes from ASH. Emailer, Jinnee, Chatter, Papillon, Phoenix, Fiffi, Artworx,... etc all take full advantage of MagiC. Run them under MinT+N.AES and they become crippled. They will run, but you will not get the full 100% out of them.
With every new release of MagiC, the other ASH software can take advantage of it or implement the new features quickly. Although N.AES supports SLB's now which makes it possible to run applications that need these, there are some that come exclusively with MagiC. These SLB are not public domain, so how are you gonna solve this?

>
>> MagiC is available in English with a English manual,
>
>...but doesn't support every keyboard layout Atari released.
Don Shoegarth is not Finnish, he would be after the English release that comes with the English keyboard layout. Is there a Spanish, Swedish, Swiss or Finnish N.AES release with manual?

>> every Atari dealer will be able to order it for you.
>
>Bull****.
??? Please enlighten me about this... what kind of Atari dealer will not order ASH or System Solutions software for his clients? funny dealer if

you ask me... how long is that guy in business?

>It's also available with English resources and docs, and remains
>easy to get a hold off, if you order it from a dealer who is
>still _actively_ supporting Atari.
Ahhh, I suppose you mean that friendly dealer from the above quote? the one
that can't get hold of MagiC. What version of N.AES are you talking about?
certainly not the latest... you're not advising N.AES 1.2 to Don, are you?
LOL

>> In general MagiC runs smoother and has a better graphic appearance.
>
>Smoother, no. Nicer, until N.AES 1.20 maybe; not anymore.
Magic runs smoother...period
what do you mean with not anymore? from your other posting I understand
you haven't got N.AES 2.0 from your friendly Atari dealer yet, so how can
you possibly comment on this? and yes N.AES its graphic appearance has
been improved, but have you looked at some RSC boxes carefully? Try to
grab a window and drag it all over the place... they still have a long way
to go.
Since you mention nicer: what about proportional system fonts ? ;-)

Cheers from Belgium
Dennis (covered in BULL****.)

Hi Martin-ï¿½ric,

>
>Konstantin Woller _has_ answered my e-mails and I don't speak
>German. In the first e-mail, he said that Joe Connor did the
>English version for him. I still haven't received my N.AES 2.0
>cd-rom, though.
:-))) LOL
Yep, he _has_ answered your mail, and now he _has_ your money. What
have you got apart from that mail ?

>Axel Gerhinger is indeed known not to answer foreign mail but,
>having spoken to him over the phone once, it is clearly because
>his knowledge of English is almost non-existant.
Speaking to a dealer over a phoneline is one thing, receiving goods
from that dealer is another thing... he doesn't even answer mail
which *is* written in German. Would you risk sending money to that
guy?
BTW: I never heard of anyone being swindled by System Solutions or
ASH, but then they don't sell N.AES of course.

Martin-ï¿½ric that crazy stuff with your postings is happening again!
this posting arrived with a text attachment. Should I reply twice or
are you gonna kick some Finnish buts?

Cheers from Belgium
Dennis

Those butts to kick might not be Finnish at all.

Mind you, Brian Van Tillborg's posts have re-started to appear
in duplicates here, so it seems something is wrong somewhere.

I'm begining to suspect a server in the middle is not Y2K-clean
and has not correctly changed year or is +/- one hour of when it
should be, so it sees posts as out of sync and re-sends them.

More than half of those are I-Connect apps. As for the others,
N.AES features the appropriate wdialog functions, so it works.

> >> MagiC is available in English with a English manual,
> >
> >...but doesn't support every keyboard layout Atari released.

> Don Shoegarth is not Finnish, he would be after the English
> release that comes with the English keyboard layout.

Note that there are four types of "english" keyboard layouts,
on Atari. Only the UK and US ones are covered by Magic.

> Is there a Spanish, Swedish, Swiss or Finnish N.AES release
> with manual?

Nope, but they don't require new kemaps to be able to use the
keyboard that already exists on your machine.

> >> every Atari dealer will be able to order it for you.
> >
> >Bull****.

> What kind of Atari dealer will not order ASH or System
> Solutions software for his clients?

The kind that is not interrested in purchasing with SysSol,
because of the exorbitant rates on ASH or other exclusive stuff.

> >It's also available with English resources and docs, and remains
> >easy to get a hold off, if you order it from a dealer who is

> that can't get hold of MagiC. What version of N.AES are you talking about?
> certainly not the latest... you're not advising N.AES 1.2 to Don, are you?

2.0 is available from a number of Dutch, German and Swedish
dealers.

> >Nicer, until N.AES 1.20 maybe; not anymore.
> what do you mean with not anymore? from your other posting I
> understand you haven't got N.AES 2.0 from your friendly Atari

> dealer yet, so how can you possibly comment on this?

Because seeing it on someone else's machine is what convinced
me to order my own copy of the CD.

My pc drive reads/writes to both 720 and 1440 floppies, But anything
written to a 720 it can only read itself afterwards. I have 4 Ataris
here with 720 drives and none of them can read a single sector!

My MSTe with 1440 drive happily reads 1440 formatted disks from the pc
but also gets stuck with 720 ones. (These are genuine 720 disks).

On the other hand Win-95 actually after some hesitation reads 1440
disks formatted to 720 without the hole covered! Or is this handled by
the pc bios? Anyway it's an Award bios.

>No it isn't the drive, unless you use a High Density disk in a double
>density drive. All HD drives I've come across can use double density
>disk as well as high density ones.

Yes, reading them they will, but not always writing them, well, not without giving corruption into the track. But as I say I only thought newer HighD disk drives had better head alignment, but this means it will only read 720 disks, I'm not certain.

>The drive can only write what is been told, so if the OS sends it dud
>info it'll write dud info...

Agreed.

>So someone did read one of my posts years ago:)))

Well, I've only been in the group for the last 6 weeks, so I missed that one, but I have no doubt its been commented on.
I think PC users probably started having this problem first because of the earlier dilema between the different drive sizes. It used to be a bugger writing your HD installation disks, then getting on site to find they only had 720 drives or worse 5-1/4 360, this happened to me after a drive from Manchester to London <groan>

>difference is enough to crash a game, lose those hours of compiling and
>that all important essay or article.

Yes, I would only recommend doing this on a document files that you can see.

>My 720k drive in one of my STE's will not even read anything from a hd

I would be suprised if it could, the 720 head would not see the track correctly, and previously discussed. This is why I thought earlier HD drives were dual standard, but changing.

>Nice to hear that Rodolphe, the CT2 that I installed in my Falcon is the best
>upgrade that I've ever done.

In case my email didn't get out, I have problems with mine. Won't boot with FPU installed, no keyboard ACIA response with CT2B installed and no access to "turbo mode". Reinstalled AB and all is well. CT2B simm=Toshiba 32mb 60ns (tried several others), tried three Falcon keyboards, not the problem. Clock going to ACIA, works with AB. FPU installed properly and works in stock Falcon (33Mhz 68882, no broken pins). Tried installation three times, each time going back to stock configuration to verify Falcon operation. With CT2B all I get is normal boot to (French) desktop, IDE and Floppy work ok. Remove CT2B and NVRAM is hosed, menus, no disk icons, used reset NVRAM to get back home.

Mike

Hi Rodolphe,

I am having 3 problems with the installation of my CT2B purchased from Systems for Tomorrow.

I have installed a couple of Nemesis, Afterburner and Mighty Sonic, so I am a little familar with the Falcon, at least enought to know where to solder wires:).

The Falcon the CT2B is installed in is know to work fine, Keyboard good and 33Mhz FPU good.

1) With the 33Mhz FPU installed, pin 1 to the right, the Falcon/CT2B will not boot, blue screen with dots or lines or white screen with dots or lines. FPU seems to get very hot, to hot to touch. I am sure it is indexed the proper way for the socket. The FPU is removed for now.

Now, without FPU, Falcon/CT2B boots from IDE drive in normal mode to desktop but...

2) The keyboard ACIA does not work. I tried four keyboards, all failed. Keyboard ACIA pins 3&4 cut, lifted, and joined with CT2 wire 8. I booted the Falcon/CT2B with the Falcon Diagnostic Cartridge and

it reported the ACIA failed to respond. Checked to see that clock signal is going to pins 3&4 ok. Ummmm, the ACIA's were already cut from a Nemesis/Afterburner installation and worked ok, but it could be possible that the ACIA was damaged by soldering this time, but unlikely I think.

3). Cannot access blue screen Turbo menu when resetting. Let the Falcon/CT2B boot to desktop. Drop down menus are in French. No keyboard or mouse, but IDE and floppy are working ok. Set switch to turbo and press reset. Screen goes to white only. No blue screen or menu, just white.

Help please:)

Regards,
Michael Grove

If it is Bang the Minesweeper-like game, with grey playfield and yellow smiley, yes! I dunno Blastman. Is it a Dynablaster/Bomberman-like?

> of ST format. If so can you tell me what you thought of it
It was my first minesweeping experience (no kidding here :) !), then I definitly got addicted, I dunno if I should thank or blame you 4 that :) ! IIRC it lacked sound effects (you could implement easily it with WavePlay() provided by SAM). My wish would be that I be multitasking-friendly (if it isn't already).

> I wrote this game with the help of a freind, but we never got around to
> releasing anything else due to
> 1) lack of response
Well, here is one!

> 2) lack of time
> 3) couldn't find anywhere to send it (ie. ftp sites or mags etc.)
Just a few (most current 1st):
ftp://chapelie.rma.ac.be/atari/incoming/
(some german sites I am sadly not well aware of)
ftp://anonymous@ftp.lip6.fr/pub/atari/Incoming (Enter E-mail as password, also thru HTTP)
ftp://ftp.funet.fi/pub/atari/incoming/
Note that the UMICH site is now unreachable thru FTP, only by HTTP (so no easy upload possible).

For mags look under: http://www.atari.org/links/Community/Publications/

BTW message to all game-coders: I like Bomberman, Tetris, Columns, Tron and Minesweeper clones but I would *really* enjoy a P u z z l e - B o b b l e one! And a Dune-2/C&C one! But the last is already on the way... (http://stune.atari.org, [FREE PUB] :) !) Oh and Tempest 2000 on the Falcon would be great too!

yep, that's what OXO told me too. BTW: The people of L.o.A. told me the
same story. They clains that their TCP/IP stack was the first that could
be used with PPP.
I don't know the history of STiNG but at the time I could use STiNG with
PPP there was certainly no sign whatsoever of Wensuite and Draconis.

Fact is that I never will use Wensuite as long as it requires its own
stack. I'm using MiNT-net since early 1996 and I don't have the intention
to change that.

>>If one read the docs STing is rather easy to set up.

>I've read the docs a thousand times and still can't set it up.

Hmm, maybe you should read then once more. STinG and MiNT-net are really
dead easy to set up.
>
>>Wensuite looks easy
>>but it isn't. The dialer part holds too much bugs and one must keep in
>>account just too many things.
>
>I don't know which bugs you're talking about. I, and many others on the
>French newsgroup, don't have problems with the dialer.

Take for instance 'Options/Modem'. It is just impossible to add a proper
'Commande d'initialisation'
For instance I'd like to use this: AT+MS=56,0,34000,42000. Whenever I save
this WS returns me with the next start 'AT+MS=56,0,34000ATD'
Now is this a feature or a bug?

>And what "many
>things" are you referring to ? Let's be specific: click on "PPP Link..."
>under the menu "Options", what do you see ?
>
>- Connexion: enter your ISP's telephone number, login, password, type of
>script (manual, none, auto), DNSs.

I'm talking about the three types of script. This is rather confusion.

Have you tried putting XMEN_MGR.PRG into your START folder? This
provides pop-up menu support etc in MagiC 5.

You'll find it in C:\GEMSYS\MAGIC\UTILITY\EXTRAS\ if you have a normal
installation. Just copy it into your start folder or make an alias to it
there.

Well let me think....

We've had chicken (well eggs anyway), sheep, and the cows were mad about missing out so they got educated (BSc) and the French still think the cows are educated, and now someone's upset about the pigs. I suppose that pigs will be flying soon:)

I just had a thought!! when the ban on British beef was on, I wondered if the blockades were still going on at Gateshead etc..

That leaves cats, dogs and goats:p

I can format DD or HD on 1.44 floppies with no problem!!! (now it's
getting baffling).

>
>On the other hand Win-95 actually after some hesitation reads 1440
>disks formatted to 720 without the hole covered! Or is this handled by
>the pc bios? Anyway it's an Award bios.
>

All of my machines use AMI (American Megatrends), in case it makes a
difference.

I know things are a little strange as a friend claims you can format a
disk using the standard desktop format and it's immediately read on the
pc!!! I've seen it with my own eyes, but still can't do it myself!

Hi

Apologies if this article is off topic/subject, I couldn't think of
which group I could aim it at.

I'm after someone to point me in a direction for info on CGI, what it is
and how do you use it... and how can I test CGI scripts without being
connected up to a server (using Win 98) so that I can test and write
CGI's out without having to go on-line every time.

Thanx in advance

Just get Perl and a browser, this is enough... if u read the tutorial
above.

Mmm... Your cross-posting wasn't very wisely done.

Thatï¿½s questions for CENTEK, canï¿½t answer that. Canï¿½t remeber me to hear
trouble like yours. French menus can be changed with the NVRAM tools
from CT2 disc. Donï¿½t forget to save and reboot.

Regards, Robert

Hold down [Alternate] and press [Insert] once or twice for single and
double clicks respectively. For a right-click use [Alt] and [ClrHome].
This works in menus and dialogs, but on my Falcon it doesn't on
desktop icons - instead of starting the program it brings up a
directory window with the program pre-selected.

Yes, it is quite off-topic, but I'm quite easy going!

CGI is a method of allowing static HTML to communicate with external executable programs. The CGI is built-in to HTML, via GET and POST tags and FORM elements, however you need the executables in order to make it work. This way, you can get the external program to do some processing and generate HTML for you, so creating dynamic web pages with real data in them.

However, you need a web server to do this too. Personal Web Server is the low-end version of MS's Internet Information Server and is available for download free from MS's site. That way, you can "host" your own web site. You publish your web pages to a directory in the same way that you upload to your ISP, and then call them up ain a browser using the URL http://localhost/whatever.

IIS (and therefore I assume PWS) has Activer Server Pages (ASP) and also IDC built-in, so you can write JScript, VBScript, and SQL database commands using ODBC to generate dynamic HTML.

Alternatively, you can install a Perl interpreter if you want to write in that language which is a more portable CGI method as there are Perl intepreters available for every platform that a web server is available for.

However, what are you going to do with your CGI programs once you've developed and tested them? You need to publish them to an ISP that allows CGI programs to be run. Ask them first to see what type of CGI they support, and choose your development tools based on that.

So is WS3. STinG is rather misleading with the CPX settings, dialer settings
and config files (right, you don't really need to mess with the config
files).

Defnitely a bug. I have experienced the same type of behaviour. Only the modem settings seem to be affected by this bug.

> >And what "many
> >things" are you referring to ? Let's be specific: click on "PPP Link..."
> >under the menu "Options", what do you see ?

>
> I'm talking about the three types of script. This is rather confusion.

This is explained in the docs, which is more than is available than STinG. Don't get me wrong, I'm not bashing STinG, but I hardly find WenSuite more difficult to set up than STinG, its dialer, the CPXs, CAB, CAB.OVL, Newsie or Newswatch/Popwatch or whatever.

FYI, in WS3, no script is for a PAP/CHAP authentication, a manual script uses the authentication dialog settings defined by the user in the Script options and the auto script sends a default script (using "gin:" and "word:" or something like that).

Hello all!

So I went back to Geneva, used CAB to check out what has been said about Magic in the atari.org forums, and found out that people had been having problems with Magic and some Hard Disk Drivers. So I switched mine to AHDI, and everything works properly, albeit slow when it comes to disk accesses. I guess I'll have to break down and buy HD Driver now! Strange that it would affect CAB, though, when it hadn't before...

Want some disk images for your ST emulator? Perhaps there's a specific game you want to play, but the ravages of time have knackered the disk you've got. Well, worry no more! One CD containing the entire Automation, Pompey Pirates, Flame of Finland and DBug archives, approx 6000 games!!!!!

Also includes PaCifiST v0.49 beta, WinSTon 0.2r2 emulators, along with the relevant tools to dump these images onto floppy disks for use on a real ST!

How much?

5 UKP inc p&p (within the UK) - will send internationally, please email me to discuss postage.

Email justin@hellraiser.demon.co.uk if interested!

For faster service, Please direct all replies through E-Mail to Ben at:
atari@benjamin.net or bensmith@teleport.com instead of NewsGroups as I
find it hard to keep up with NewsGroups.

e-mail: atari@benjamin.net

Click for WebSite!

I've added more and will be adding more Hardware, Software, Books and
Accessories for Classic 8 Bit and Atari ST. So checkout what's new on
my WebSite. In Fact, check it regularly as my Catalogs are updated
regularly. Customer's are served, first come, first serve! I have 6
different Catalogs, and my SoftWare Catalogs are my largest. They have
the biggest Byte Count. You should see my inventory! I have TruckLoads
of HardWare, Boxes & Boxes of Software & Libraries of Books & Reference
Material for the Classic Atari 8 Bit & Atari ST! And remember, if you
can't come see me today, come see me tomorrow!

also, if you live in Portland, Oregon, interested in Atari and want to
meet with other Atarians. Read the Ad near the bottom of this message.

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-
Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at
http://www.atari.benjamin.net And Jump to my FTP site linked to my Web
Site so you can Download Free Catalogs or FTP directly to my site at:
ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way,
Feel free to Request catalogs through E-Mail. Really, it's not an
inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both!
Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail.
Please let me know if I can attach text files to your E-Mail. Catalogs
are just regular ASCII text files so you can download them into your
text editor and view them, edit them or print them out! It would make
things easier for me if you take my Catalogs, load them into your text
editor, delete what you don't want and E-Mail me the rest! To expedite
things, include your complete Mailing address so I can figure your
Shipping/Postage & Handling. I'll be back after the weekend.

If you have an Atari and live in Portland, Oregon. U.S.A. or vicinity,
you are cordially invited to attend a Meeting of the Portland Atari
Club. You don't have to be a member to attend. Now we've moved our
meeting to a new night. Same Bat Time! Same Bat Channel! We meet the
2nd Thursday of each Month. Our Next meeting will be Thursday, February
10th, 7 pm at the Pizza Baron at 2604 S.E 122nd Avenue in Portland,
Oregon. We're trying to rebuild our club so we're looking for Atarians

who wan't to get involved in supporting other Atarians. If your interested, call Ben at (503)256-9974 and by all means, come to our meetings on the 2nd Thursday of the Month. For more info, surf the Web@

http://pac.pdxweb.net

e-mail: atari@benjamin.net

For more information or directions, please call our Vice President Ben Smith at (503)256-9974 See you there!

You should know I regularly add more Atari stock items to my catalogs and this weekend is no exception. A list of my new ST Software I just added to my Catalog are listed below. In case your wondering why my Catalogs (below) are formatted to 38 Columns. They are made to be compatible with the lowest common denominator. Also known as the Atari 8 Bit. Once the Classic Atari User converts the Carriage Returns to Atari 8 Bit.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or bensmith@teleport.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Hi all,

OK - I READ THE MANUAL... well part of it anyway. ;-) Here's
something to address the topic:

"Caution: Never store or transport the Syjet drive with the
cartridge partially or fully inserted. Leaving a cartridge
partially inserted, or transporting the Syjet drive with the
cartridge inserted may damage the drive and void your warranty."

Message-ID: <4Fvh4.515$D4.12889@newsread1.prod.itd.earthlink.net>
Source record: 66764

I am not sure if it's the falcon causing the interference, or the rf out has a problem. I recall reading somewhere that the rf modulator inside the ste can be tuned to give a clearer picture. The interference is not the same as just when the falcon is turned on, but not connected to the tv.

The falcon also has no shielding on it, but niether does my ste and the ste doesnt cause a problem.

Also, does anyone know a place in the US where I can get a composite adapter block for the falcon.

Thanxs in advance

B.P.

>
>Peter

Dave had some trouble early on with Apple over the MagicSac, which is why it was advertised as an enhancement FOR YOUR APPLE MACINTOSH.

The idea was you were improving the Mac you already owned by taking the ROMs out of it and installing them in an ST.

IE, you had to already own a Mac to use the hardware cartridge in an ST since you needed the Apple ROMs.

I think by the time the Spectre arrived, Apple had pretty much decided that Atari wasn't going to be competition... for anyone.

Apple also gave Darek Mihocka some trouble over his emulators, which is one reason he got into emulating the Atari systems instead. Not that Atari didn't hassle him, just that Apple had higher-paid lawyers.

I hope Dave is out there lurking, reading all this stuff.

In a world that had a few really bad people in it, he was one of the really Good Guys.

In fact, I can easily imagine Dave wearing a "Garth Brooks" sized White Hat, riding off into a "Sunnyvale Sunset"... :)

The heck with that! I just want David Small to write regular
articles that get printed in my local newspaper. About ANYTHING.
Dave could write an article about roadkill or any other really
stupid subject and it would still be worth reading!

This depends on what you want to run. If you want to run games and demos,
PaCifiST and WinSTon are still the best. If you want to run serious apps,
then try Gemulator or TOSBOX. URLs are in the Quick FAQ:

You can't do it in Euro countries either yet. There are no Euro checkbooks yet, no Euro money. You can theoretically pay in Euros with a credit card, but you have no advantage in doing so since Banks still charge an exchange rate for international transactions, which is rather silly.

The next implementation step for the Euro is supposed to be Jan 1 2002, where the preferred currency is supposed to become the Euro.

Selling my 4 meg Falcon 030 (internal 65mb HD)
All audio mods perfomed by Wizztronics

With Steinberg Cubase Audio (16 tracks or, 8 tracks with 2 fx busses)
sorry, no manuals...but you do get the disks & the dongle
Falcon Digital Interface (both optical and coax SP/DIF)

$650 + shipping

I have both mono and color monitors - $65.00 each.

E-mail if interested. Cubase runs flawlessly...Not like the PC version!

As far as I can make out, they are hoping that big businesses can carry
the Euro to make it popular and not the average person on the street.

Think about it! One currency in ALL countries that are members of the
Common Market... how many people in your town travel or trade within
Europe everyday!!!!

Or get Weblight webserver on the Atari and connect it to the pc with
STinG!

The webserver Weblight runs fine here with Geneva and also comes with a
perl compiler. With this setup I can use MSIE on the pc locally to
browse on the Atari.

I don't know what L.o.A. is, but I've got here an issue of ST Mag (dated
July/August 1997) containing the first test of WenSuite; and on that same
page there's an announcement of the imminent release of the first version
of Sting using PPP. Two months later, there is in the same mag a test of
Sting 1.06. So, yes OXO Systems began working on WS long before Sting could
use PPP. So they had a very good reason to develop their own stack, contrary
to the authors of Draconis/Adamas, which is much more recent than WenSuite,
to my knowledge.

>I don't know the history of STiNG but at the time I could use STiNG with
>PPP there was certainly no sign whatsoever of Wensuite and Draconis.

I think there were some beta releases of Webspace -- the first name of
WenSuite -- before July 1997, but probably not as early as early 1996.

>Fact is that I never will use Wensuite as long as it requires its own
>stack. I'm using MiNT-net since early 1996 and I don't have the intention
>to change that.

OXO announced the release of a free stand-alone version of their TCP/IP
stack to allow the development of a "bridge" with Sting -- or something
like that, I'm not sure about the correct terms.

>>>If one read the docs STing is rather easy to set up.

http://cgidir.com/ is a good starting point.

Here's a little script that detects CAB and redirects to another page if
the browser is present:

http://www.vanc.igs.net/%7Eroughley/cgi-bin/tos.pl

Those not running CAB will be taken to the URL in my sig, so there'll be
very little novelty for such users (the CAB-specific page won't be
seen).

I have an old demo of Magic PC (1.2) which I have been able to use as
a Tos image for Gemulator.

However I have only been able to use the standard ST screen modes - if I
use Winsizer to extend the screen size then the "ST" hangs.

Anyone have any idea how I can get this to work?

>How much RAM have you got? It might be that CAB doesn't have enough memory
>to finish the formatting ?

I've got 14Mb, and it even does this on a pretty much clean system, so I don't think memory is the problem. It only does this with Magic 6.01 and not Geneva 006, TOS 4.04, or AES 4.1. Does anyone know if there are any Magic settings that I'm not aware of that could elicit this kind of problem?

Also, can anyone give me the actual URL for Magic Online? I know there's bengy.atari.org, but right now that's not working. I'd like to research more about Magic, but everything points to that page, specifically the atari.org subdomain, which I can't get to. I hope they get that fixed soon!

Finally, I don't want to add to the Magic vs. NAES battle, but so far, I'm not too happy with Magic (but I'm not going to attempt the battle with Woller to get NAES). Although it looks nice, and I even venture to say looks nicer than pictures I've seen of NAES 1.2 IMO, and is extremely fast, I've had not only the CAB problem, but also problems getting it to boot up reliably, and often I get "Exception Error 68000" or something like that unexpectedly, causing software to crash. I'm tempted just to go back to Geneva, since at least it runs reliably and is very compatible. Any thoughts on these things would be appreciated! Thanks!

Hello,

I have just acquired an SCSI Writer CDD2600 from Philips for my falcon.
Mï¿½tados know it well with file SCSI_CD.BOS. On desktop, my icon
representing the reader appears well, but impossible of reading CD.
For writing I haven't problem.

For my reader of CD Plextor SCSI, I haven't problem, I can read the
contents of it.

I test for my writer all the possible manners in vain.
Impossible to open the window to display information and the contents of
CD.

I have just tested with another writer YAMAHA, I have the same problem.
Does that
come from layer GEMDOS of files DOS?

Does somebody have to you it a solution?

> but you have no advantage in doing so since Banks still charge an exchange
> rate for international transactions, which is rather silly.

I do not know for UK but I had a good surprise last month. I sent a
Postal Money Order (PMO) (as I usually do to pay orders out of France)
to ASH for a few updates. I asked for xxx DEM and there was a little
fee as usual (56 FRF in my case, about 8.5 EUR, depending of the range
of the amount). You know what ? The PMO was made out in EUR ! The
translation is made both sides in the corresponding currency. So if I
like it (if necessary), I can pay in EUR with this way.

Bye,
/Pascal/

Indeed, that a fault I've rapported to the author but alas it's still not
solved.
BTW: You don't need to zeroing your partition. With Diskus for instance
it's possible to give that nameless dir a name. Unfortunately you'll need
a old version of Diskus. With the latest version I just can't do that
anymore. I don't why.

Agree there has been a great progress but that dialer still sucks. Most
people outside France can't make a connection at all. I'm one of the lucky
guys who can make a connection but as said in previous postings I refuse
to buy it as longs as I need that WS dialer. I do want to use my MiNT-net
clients, Okami, etc.. I don't give a damn about WS own mailer and
newsreader. The only thing I'm interested in is the browser. Personaly I
don't like that all-in-one concept.
>

Yep, that's me. Even the latest version of WS still creates a nameless dir
but mind you this only happens with MiNT VFAT, not with MagiC VFAT.
I've told this to the author but apparently he doesn't know how to solve
this (or he doesn't give a damn about this at all).

L.o.A. = Light of Adamas.
Oke you're probably right but again STiNG was know to the great
public whereas WS stayed in the dark, at least for people outside France.
Furthermore STing is working for almost everyone nowadays whereas working
with WS is something like playing the lotery. Some have luck, whilst the
most of us looses the game.

According to the authors of Draconis the begun to work on it
somewhere mid 1996. So they claim also to be the first with a working PPP
stack (after MiNT-net and NOS ofcourse) BTW: The dialer part of Draconis
is the only thing of the whole package that works good (and easy).

Hey, I just found the history file of WS:

quote
Program history

---

18 mar 96 Beginning of the Wen.Suite project
13 apr 96 v0.10a
10 jun 96 v0.90ï¿½
20 jun 96 v0.92ï¿½
22 jul 96 v0.96ï¿½
31 aug 96 v0.98ï¿½
15 sep 96 v1.00 (first demo version)
23 sep 96 v1.02
10 oct 96 v1.03

19 nov 96 v1.07
20 dec 96 v1.40
28 dec 96 v1.41
20 jan 97 v1.45
07 mar 97 v1.56

05 may 97 v1.70b
-PPP Link now active

21 jul 97 v2.00c (first commercial release)

unquote

On a old backup of my TT030 I found that on *03/may/97* I was
testing STing (with PPP). So who was first?

Yes that's what the author said to me 6 months ago. If they want
to make WS populair outside France they surely must release a Wensuite to
STing (or MiNT-net) gateway. If they like it or not but this is really the
only way to the great public.

Charging exchange rate for currency of the Euro zone is not allowed but
the banks found another way to get money. They charge you now "Easy
Transfer costs".

Have you tried Okami 2.x? IMHO that's the best that one can find on the
Atari market. I doesn't look so fancy like Mymail and Amail but it does
its job without any hassle.
Okami is an offliner so you need PoPwatch and Newswatch to retrieve mails
and news.

All these programs are on the Belgian ftp-server in the internet dir
ftp://chapelie.rma.ac.be/atari/internet.

I'm having the same problems with CAB2.7 and loading existing sites, they
come up as not found, on one occasion I had the "source" come up, yet if I
load up CAB2.5 with an older .OVL there's no problem.

Hi James,

>With TriYahoo I'm trying to register the program, but nothing gets typed
>into the registration lines. It works under TOS, but due to it's copy
>protection under MagiC, the program thinks it's on another computer and
>puts it back as Shareware.
I suppose you didn't set up the HOME$ Environment properly, create a folder
called HOME in the GEMSYS folder. In the HOME folder best create another one
and name it DEFAULT.
When the HOME$ environment is set, all inf. files are loaded from the
specified folder.
Open magx.inf file and edit or add the following line if it's not there:
#_ENV HOME=C:\GEMSYS\HOME

>Another problem similar to this is that under some programs (an example is
>the TriYahoo! yahtzee game) I can't seem to enter information into
>non-modal dialougue boxes.
If you're not using proportional spaced fonts then you have to remove the
folowing lines from magix.inf:
#_OBS
#_TXB
#_TXS

If you're using proportional spaced fonts then those three lines need to be
there and be specified, a good average value would be :

#_OBS 8 16 0 0
#_TXB 274 0
#_TXS 274 0

All of the above mentioned should have been setup correctly in the magx.inf
by the supplied configuration program.... it's located in the MagiC/Utils
folder and is named MAGCFG.PRG

Cheers from Belgium
Dennis

Hi Pï¿½l,

>Is it possible to connect any SVGA monitor to a TT and get it to display TT
>high in b/w? My old TTM194 is broken and I miss the high resolution.
Yes, No and perhaps.... ;-)

Yes; if you install a graphic card in the TT, your SVGA monitor will be able
to display the same resolution with this card in mono and colour.

No; the TT monitor output is a ECL signal, which your monitor can't handle

Perhaps; last summer Oxo Systems announced an ECL to VGA convertor for the
TT in the French newsgroup, It would cost 300Ffr which is something like 380
Norwegian Crowns.
On the OXO website this convertor is not mentioned. Perhaps it's best to
send them a mail, and see if this thing really exists or is just a piece of
"ghostware"
mailto:oxo.systems@online.fr ,they understand English. Normally I would write
them myself, but I'm not exactly in their good books....

Cheers from Belgium

Hi Jï¿½rgen,

>I'm sorry to say that it happened to me on my Milan. While unpacking
>Wensuite made a empty folder that couldn't be erased or renamed.
This does not only happen on a Milan, and the newest version 3.3c still
has this bug. I've only noticed it under plain TOS. In MagiC it doesn't
stick his ugly neck out...

>The only way to get rid of it was by zero:ing the partition. I think
>that is the same error as they were talking about.
That's a bit drastic.... with the Jinnee destop installed you can erase
that empty folder without pain. You don't need the full version of
Jinnee do to this, the demo version will take care of it just the same.

Cheers from Belgium
Dennis

> Ghostscript) driver for it.

I' like to connect the SLM to an PC, too. But I dont't do it,, because I own
an ST with a PAK accelerator.

I think the easiest way to use a SLM804 Laser with SLMC804 Controller is to
buy an old Mega ST with 4 MB and maybe a SM124 monitor (if you don't use an
TV set) and a small harddisk.. It should cost less than a new laser printer.

On this computer you have to install an Diablo SLM emulator (archives similar
to diab630 or SLM1_4) at
http://www.muenster.de/~reschke/
to use the laser like a printer connected to the centronics parallel port.
You may install GEM Ghostscript gemgs from
http://www.tu-harburg.de/~smcf1605/ (actually moving). The SLM-Driver of
gemgs uses the emulator for outpout onto the ACSI-Port.
On linux you have to install lpr (I think) and SLMtool s from the linux-m68k
archive tree. Ghostscript is newer in Debian Linux Distribution than in the
m68k archive.

greetings, Helmut Obermeier

With the recent demise of some Atari related magazines I was wondering how meny Atari related magazines/newsletters are still out there.
If you publish an Atari related magazine perhaps you could spend a few moments to answer the following questions.
PLEASE mail your answers directly to me by the end of the month, there is no point clogging up the
newsgroup with your answers and I might miss the odd reply among all the other postings.

1) Magazine Name :
2) Format (web, e-mail, printed) :
3) Coverage (ST, Falcon, Jag, Lynx, VCS) :
4) Number of Subscribers:

You do not have to answer question 4, but it would be useful.

Thanks,
Stephen Moss

Touchy! Touchy!

What I said was it isn't a common activity for MOST people not just the area where I live. Narberth is a small town, but Mansfield is a hell of a lot bigger and I don't know many people there that travel between France, Spain and the UK every month let alone every week.

The only exception to this are international couch drivers, long distance lorry drivers, international couriers, aircraft pilots and airhostesses and anyone does that type of work.

Unless you call the border between England and Wales country hopping!!!!

All I made was a general observation on people I know around the country. I never said that THIS WAS the view of the UK!

Incidentally most of them preferred to get out of the common market, but not everyone. It's like saying 'most people prefer Labour than conservative' but that doesn't mean everyone, does it!!!!

That would be more then welcome but as said earlier the author told me
this already some 6 months ago.
Draconis has seem the light and comes now with a MiNT-net gateway and a
Iconnect gateway.

Erh, are you talking about an empty dir (with name) or a nameless dir?
On my Hades WS creates an *nameless dir* when I start WS for the very
first time. If I leave that nameless there WS will not create another one
But as soon as I delete that dir (via Diskus) WS will create one again at
startup.
AFAIK, this only happens with MiNT VFAT and not with MagiC VFAT

In fact that nameless dir is rather harmless as long as you don't want to
make a backup or as longs as you don't try to access the WS dir with
Kobold.

Exactly! Simply run it with Gemulator! I have not tried it but CAB
does work online with Gemulator/STinG so maybe Weblight will too :-)

>
>>The webserver Weblight runs fine here with Geneva and also comes with a
>>perl compiler. With this setup I can use MSIE on the pc locally to

>
>Whats the minimum spec for weblight and an url would be handy please?

Just tried it again here with my 4 MB TT running Geneva/Neodesk and
managed to browse with MSIE4. Also kind of worked with plain TOS 3.01!

But sometimes the connection failed with lots of lost packets in STinG.
Strange, it did work perfectly last time I tried. But that was with an
earlier STinG version...

Also actually worked with CAB2.5 running with Geneva running Weblight
on the same computer. But, a bit tight with only 4 MB ST RAM.

You can get Weblight from:
http://obooklage.free.fr/sti_serv.htm

Source record: 66687

we are pleased to report that the very rare,and elusive 7800/2600 monitor carts are in stock now,if you were on the reserve list,you should have received a e-mail from us stating this fact,with ordering information,if you did not receive a e-mail,please contact us a.s.a.p.,for this is a limited time offer,and qauntities are very limited.
if you are interested in one of these actual licensed atari product for your collection,or use,please contact us now,we may have a few left,but time is of the essence.
the list price on this item is $99.95,this is a low end development system for your 7800,it will allow you to develop your own 2600 game,and store it in a 8k battery backed up ram,or 16k battery backed up ram for the 7800,it is cartridge based,using the 2 joystick ports of your 7800,and the 2600 keypads/touch pads,or sesame st. controllers for data input devices.
this cart development system also comes with a 200 page developers manual,and schematics of the7800,also it has 3 2600 games on board,also with a demo of a unreleased 7800 game on board. ordering information can be found on our web site at, www.atarisales.com
thanks,
lance

I had this problem too in the beginning. Make sure that the Paths dialogue is set up correctly in the Setup menu. The various mailboxes shoule point to files, probably best with .txt extenders. First time for me, Amail was trying to import mails into an impossible mailbox!!! ;-)

Call me shallow but I do like the nice front-ends offered my MyMail and
A-Mail its a shame that neither work very well on my Milan.

>Okami is an offliner so you need PoPwatch and Newswatch to retrieve mails
>and news.

I did read a little about Okami but it sounded unnecessarily complex
to set-up. Why does it need two other programs to read Mail ?

>>I tried A-Mail as well recently, it managed to download
>>mails but then refused to transfer them to the Inbox!
>
>Euch, what are you trying to say here?

Well, it downloaded the mails ok but then it reported that there
was an error in the mails and left them in a Recover file in the
TMP folder. It wouldn't move them into the InBox.

Just my experiences or has anyone else had the same problem ?
I'm using Mint/N.AES on a Milan.

Peter

> though... :-/

IIRC there is a rather terse list of the contents of the extras folder
somewhere towards the front of the manual, but I've misplaced mine at
the moment so I can't swear. Odd, as so many recent programs rely on
this feature: you'd think it would be installed by default at least.
Apparently it's built in from v6 onwards, so this is no longer an issue.

Glad it was a simple problem!

Well, I'll be... I wonder why the manual tells you to not store the
cartridge inserted. It would be a simple enough thing to tell the
drive to eject the cartridge upon loss of power.

My adapter attaches via SCSI so should work on any machine with a SCSI interface. Also it won't exactly be out "any day now". I will not put a time on it though in case it takes longer than I expect. However at the moment it is close to being completed.

If I recall correctly, the CPX that came with SAM didn't do anything. It was merely a place holder for a future update that never happened.

I think this is correct. Currently I am running version 1.2 of SAM and
do not have the CPX installed. Works just fine on my CT2B Falcon. :)
And is one of my favorite ACCs. Wish there was more programs that would
support it or some modifications made to it.

Hi All,
Once SAM (1.3 here) is set up via the ACC I don't keep the ACC active,
only SAM.PRG (Auto folder) and all sounds load OK! (no SAM_SET.CPX either)

Hi Mike,
Not sure if this is related but I believe some older hard drives are
too slow to cope with the newer drivers. Heard it somewhere!
John G,
P.S. Off topic: That Concord Bible program runs well on the Falcon
(surprised due to how old the program is!).

|. . . . .
|
|I'm using a Macintosh computer for the CD writing actually, with
|"Toast", and have my Atari files on the Mac drive, using MagiCMac.
|Now, I want the CD to be readable on *any* Atari ST with a CD-ROM unit,
|with TOS, MagiC or whatever. Most importantly TOS of course.

If all you want is TOS compatability then I suggest CDBackup which is what I use on the Hades. Whether it works with MagicMac I have no idea but you could try the demo available from Anodyne Software.

If you want additional things as well then I suggest that you try it and see - after all, CDRs are fairly cheap and all you need to do is burn two or three and try them. Let us know the result.

Hello

I have been playing Substation with 3 friends via the midi selection. After a few evenings of beating the crap out of each other, I was wondering if there is a way for players to team up and play against the monsters? Its lonely fighting the monsters by myself, and after getting myself killed by my friends more times than I care to admit, I need to find another alternative, that doesn't seem to appear in the menus. Where there any add ons etc. that support multi users against the monsters, like midi maze allows to play against opponents and drones?

Thanks Brian.

Sorry I can't help you with that. As said aMail works just great on my
Hades. I do use the MiNT-net version however. I never had any problems
with aMail.

REVIEW of this BBS / CONFERENCE area..

When I saw this on the Atari 8-bit Newsgroup, I was amazed. I couldn't figure out at first who this was that was kind enough to set up a local dialup shell that would do text versions of E-mail and newsgroups that an Atari 8-bit (or above) could dial into. Simply amazing!

Come to find out it was one of many BBS's I had contacted in the Dallas area called the FAMILY NET (972-496-0650). I wasn't sure that it was still running, and I didn't think a BBS would carry E-mail capibility anymore, but apparently once you get validated a few options open up. :)

The E-mail account works very quickly. I posted a test message from FAMILY NET to my PPP mailbox at swbell.net. The message arrived between the time I stepped from my Atari 400 to my Macintosh (the matter of only minutes). So the matter of minutes.

The newsgroup, both Atari 8-bit and ST are there. Knowing this is there, I would like to ask for the Atari video games newsgroup. (Have to keep up with the latest Lynx/Jaguar games!) I can at least say that the Atari 8-bit newsgroup was there and with some very recent messages. I have yet to see the messages that I posted on the newsgroup at the FAMILY NET arrive here, but given that the E-mail works, the Newsgroup messages are probably sent out but on a timed basis.

I tried the other ways of logging on...

> telnet://209.217.2.202

Works fine! Just like logging on to a BBS, and this one, once again, has the Atari-8bit and atari-st newsgroups.

> http://209.217.2.202

Interesting interface. Haven't had much luck getting it display the message areas, but still has potential.

> nntp://209.217.2.203

Not familiar with nntp. Would like to know more about that.

So that's the word. Atari 8-bit users in Dallas now have a place to go to check E-mail and newsgroup messages. With this feature, I now have 85% of what I need to do on the 8-bit. Better make it about 95% actually, since I do must web browsing, what little I do, at work. :)

Take care, and to all those Dallas Atari fans, contact me and I'll
let you know of our ATARI meeting happening Saturday the 29th!!

Look forward to hearing from you,

Doctor Clu

1273. Sun ECL Monitor and a TT

Newsgroup: comp.sys.atari.st
Date: 2000-01-22 00:00:00 UTC
From: jba4@po.cwru.edu
Message-ID: <388a0d28.74722135@news.cwru.edu>
Source record: 66719

Hey everyone. The other day walking around at my school, I came
across a pair of Sun mono ECL monitors being disposed of. Naturally,
I grabbed 'em. Now, I'd like to connect one of the monitors to my TT.
The sun DB-9 pinouts are as follows:

1 - ECL High
2 -
3 - H Sync
4 - V Sync
5 -
6 - ECL Low
7 - GND
8 - GND
9 - GND

Now I've seen the TT030 home page and I've tried to understand the TT
pin diagrams, but I can't make heads or tails of them. Could someone
please help and tell me how to connect this to a TT? Even a
simplified pinout diagram for the TT would be helpful. Thanks
everyone in advance!!! I appreciate it!

>
>

I've have to try it like that. Wish someone would modify version 1.3 of
SAM so that I could run version 1.2 and version 1.3 at the same time.

For example, change the names of version 1.3 to something else like
SAM3 or something similar. I assume some of the code would have to be
changed as well so that the ACC and Auto program will be able to find
one another.

There are other programs that I'd like to run more than one copy of
as well. Is there an easy way to run more than one copy of a program
at the same time?

Most programs that I want to run like this are different in some way.
Such as different versions and modifications but the filenames and
supporting files are the same.

I notice some programs can be ran more than once in Geneva such as
AtarIRC, but since the filenames that appear in the Geneva Applications
Menu are the same, it can get confusing.

Another modification I'd like to see for SAM is sometype of AtarIRC
voice communication over the Net in real time.
For example, Record your message in SAM and send it to someone while
on IRC. And be able to talk back and forth in real time.
Seems possible, anyone out there like to try and make it work?

Hi there,

I got this unused atari and I'm about to use it again.

Since my unix server hasn't got a display and my normal pc takes to long
to boot, makes to much noise, etc etc I want to use my atari to telnet
to the server and do all kind of things.

Anybody knows if this is possible? Do I need an ethernetadapter to do
this? Serial cable? Parallel?

Will I need an harddisk? Can I use an ide harddisk? DoI need to solder
an adapter for this?

I got a 1040Ste with 1 mb ram. No harddisk or stuff like that.

Thanks in advance, Max

> >and news.
>
> I did read a little about Okami but it sounded unnecessarily complex
> to set-up. Why does it need two other programs to read Mail ?

It doesn't. It needs other programs to send/receive mail and news
because it is specifically an offline reader, and gives you a choice of
transfer methods. Most people are probably using the POPwatch/NEWSwatch
combination with STinG, but you can also use Okami with NOS, SOUP and
some other transfer options I've currently forgotten (including Unix
formats useful for MiNTnet users, IIRC). It can also be set up as
multi-user which can be a help on some setups.

The setup can seem a little daunting at first as you need to edit a
bunch of config files in a text editor. However, the sample config files
supplied are well documented and for many options you can leave the
defaults set for the most part.

Once it is set up it's very powerful, with excellent sorting and
filtering, PROPER threading (as opposed to simple sorting by subject -
though NEWSie may have improved in this area in later versions,
possibly), pretty much full MIME facilities (NEWSie still seems to have
problems in this area), can call external viewers directly for some
attachments etc.

Part of the perceived complexity stems from the fact that it is highly
configurable, even down to how text is transformed/displayed in messages
(eg changing quoted text or other elements to a different colour or
style). You can have multiple signatures and quote attribution lines set
up for different newsgroups, mailing lists and mail recipients, allowing
you to have different languages for different discussions etc.

In short, it's worth the effort, and you won't find a better mail/news
program on the Atari IMHO.

If all you need is telnet, install STiNG and TelStar on a floppy,
then connect to your unix server using a null-modem cable on PPP.

STiNG and TelStar should fit on a single floppy. Set the modem
port to its maximum 19200 baud and have a go at it.

>

Hi Jerry,

Ahhh thanks you for that. I had the paths pointing to folders
because it said "Path" not "Path/Filename". They now point
to files called In.BOX, Out.BOX etc.

I am now able to see the mails I download in the InBox etc.
I have also managed to create a Custom mailbox (why is there
no menu option for this ?) but when I "Moved" a mail to this
box it was copied rather than moved, creating 2 copies of the
mail, one in each mail box.

I have been using Newsie for a long time so it may take a while
to adjust.

Thanks for your help.

Regards,

Peter

1283. Re: Info on CGI...

Message-ID: <1e4t4vg.p3b1zqyhliywN%roughley@HORMEL.vanc.igs.net>
Source record: 66729

Steve Stupple <Steve@atari.org> wrote:

> How do I get hold of the CGI script for it?

```
#!/usr/local/bin/perl

$cab_html_page = "http://www.somewhere.com/atari.htm";

$not_cab_html_page = "http://www.somewhere.com/other.htm";

read(STDIN, $buffer, $ENV{'CONTENT_LENGTH'});

$user_agent = $ENV{'HTTP_USER_AGENT'};

if ($user_agent =~ /iCab/i) {
print "Location: $not_cab_html_page\n\n";
} elsif ($user_agent =~ /Cab/i) {
print "Location: $cab_html_page\n\n";
} else {
print "Location: $not_cab_html_page\n\n";
}
```

The only way this script will fail is if there's another browser (besides iCab) that has "cab" in HTTP_USER_AGENT. I checked browserwatch.com's extensive list of user agents, and there are no other browsers with such text. CAB identifies itself rather inconsistently based on the overlay and stack being used, so the latter part of the script simply looks for "cab" (regardless of case) and nothing else. It has been tested under STiK, STinG, I-Connect, and MiNTnet.

Hi,

HT>All files stick to the 8+3 naming convention, and I understand that I
HT>need to create an ISO-9660 CD for this, but..... TOS also allows
HT>folders with extensions, and this is illegal in ISO-9660. I could of
HT>course remove those extensions, but that would cause a lot of
HT>problems, since some programs create and use folders named like that.
doens't Toast permit to exceed these warnings?

The Atari soft permits either ISO or DOS or "Don'care" with a warning
that a 'don't-care-CD' may be not readable on a non-Atari. We made a
CD on a PC with Win-on-CD and it changed all my German special
characters (umlauts) to hebrew signs...

HT>But, I'm sure someone here has created an Atari compatible CD and
HT>bumped into the problems mentioned above -I need some advice please.
HT>Thanks.
Soon, I'll do it with my TT and rename again the folders with that
characters I had started to make them PC compatible...

I think Toast must be able to provide you with an option I mentioned
above.

The crashing that you experience with MagiC certainly wouldn't give CAB a head start in the page formatting stakes! :-(

Might be worth entering the line:

;#_TSL <non-preemptive>

in your magic.inf file, that will turn off preemptive multitasking whilst your Auto folder etc load and initialise. Open the MagiC config CPX and turn multitasking on in that, save the result - when the CPXs initialise then multitasking will be switched on.

Well, it looks like the magic date for FoReM, at least on my
system, is January 10th. It works okay on the 9th, but when it goes to
the 10th it continually writes "Date change:" to the log file.

I tried installing the Y2K patch and it changed the date from
1/09/00 to 1/09/04. It did nothing to solve the problem. This is with
TOS 2.06 on a Mega STe.

I don't have it handy, but the BEST Electronics catalog has the
pinout. He probably has cables. Alex at ATY would know too.

You may have to defrag, or at least move and delete all the files on the
disk to clean it up before you do a recording session.

Not sure if it could be, but have you tried defragging yer HD before
recording?

perhaps the data's in a bad way and therefor you poor likkle drive heads
are flying all over the place trying to store data and obvioulsy
impacting DTR.

Hope this is of some help

Yes, on an STE only. Other machines don't use simm modules.

> Is combination possible: 2*1Meg+2*256Kb?

No, you shouldn't mix SIMM sizes. Valid memory configurations are 512K, 1M,
2M or 4M.

This is all explained in the Quick FAQ.

In my case because I generally use PC software for internet access these days, and would have to run a separate online session to use Okami under MagiC-PC, ie it's more convenient. And for pity's sake let's not start another flame war about all this. Everyone take note: we are discussing Atari mail and newsreaders here, and I didn't bring up anything to do with PC software!

> At least your information is very sound with regard to Atari
NEWsreaders. I
> look forward to setting up OKAMI on my ST. There are just too many

It's worth a look. Took me a couple of hours to work my way through all the configs and docs the first time and a while longer to tweak it. Plus you'll need to set up POPwatch and NEWSwatch too (not hard).

I figured you would show up here, Tony (and I'm glad you did).

> User should be aware to change the above to required path

That should be obvious.

> >read(STDIN, $buffer, $ENV{'CONTENT_LENGTH'});
>
> The above line isn't needed surely?

I don't know, since an existing script was modified and then someone
familiar with Perl looked it over and changed a few things.

> Plus there was no exit;

The original script didn't have an exit. I logged in under Telnet and
ran the script directly -- no errors were reported under Perl 5.

> >The only way this script will fail is if there's another browser
> >(besides iCab) that has "cab" in HTTP_USER_AGENT.

> "caB" etc and thus give you more chance of success. As you may have
> guessed by now what the i is for :)

Yes, but the switch is there because "CAB" also appears as "Cab" in the
HTTP_USER_AGENT. This is what I was faced with:

Mozilla/2.0 (compatible; Cab/02.54; Ovl/1.2904; STiK/01.20; Atari)
Mozilla/3.0 (compatible; CAB2.54/5.62; Atari)
Mozilla/3.0 (CAB 02.71; I-Con.OVL 01.70; MagiC)
Mozilla 2.0 (compatible) Atari CAB/2.74 MiNTnetOVL/1.84 SSLeay/0.80
Mozilla/2.0 (compatible; Cab/02.70; Ovl/1.3103; STiK/01.20; Atari)
Cab/02.70 Ovl/1.3103 STiK/01.20
CAB 02.60 / I-Con.OVL 01.10

> Below is untested but is twice as small and should do the same job
> with a little more chance of succes:)

Let's not get too cocky <g>. The script still might have some redundancy
but there were certainly no failures during testing. The people who
provided these user agent lines actually tested the script with CAB (the
only overlays I could test on my TT were those for STinG). And iCab has
a feature where it can fake any browser by pasting another user agent
line into its "Identity" dialog, so I tested each of the user agents
listed above online -- nothing slipped by the script. I call that
success.

```
> #!/usr/local/bin/perl
>
> if ($ENV{'HTTP_USER_AGENT'} =~ /iCab/)
> {print "Location: $not_cab_html_page\n\n";}
> elsif ($ENV{'HTTP_USER_AGENT'} =~ /Cab/)
> {print "Location: $cab_html_page\n\n";}
> else {print "Location: $not_cab_html_page\n\n";}
>
> exit;
```

Redundancy noted (the exclusion of two lines). I have so little
knowledge of Perl, though, that I can't comment on the exclusions
(disregarding the two lines for the HTML pages themselves, which you
admittedly forgot to include).

Thanks for your input. I might pick your brain down the road <g>.

Source record: 66605

Hi

I have a copy of C-Lab's Notator Music software, this is left over from the days when i used my atari STE all the time. But, because I now use my PC more I would like to use Notator with an emulator on my PC. Of course there is one small problem, THE DONGLE. If there is any one out there who knows of a way I can use Notator on my emulator without the dongle please mail me.

Thanks
Reece

A menu for custom mailboxes would be nice. Have you tried setting up Amail to automatically sort your mail into different mailboxes (using the Ruleset=) I have Amail installed to run from STiNG login, and by using the command line options -e, it will send/retrieve mail automatically at startup! Very handy! Another tip - get the UrlSrv prog. from Atack's homepage (under products), it's a freeware utility which will allow you to click on URLs in Amail and launch them in the appropriate application. I believe StringServer can also be used!

> > I have been using Newsie for a long time so it may take a while

For the moment at least, you will still need Newsie for NNTP, which it does brilliantly! ;-)

TTM194/195 monitors (DB-9 female)
1. ECL
2. ECL ground
3. H sunc
4. V sync
5. (not used)
6. XECL
7. XECL ground
8. sync ground
9. Monochrome detect (to ground)

TT monitor out (HD-15 female)
1. red
2. green
3. blue
4. ECL +
5. ground
6. red ground
7. green ground
8. blue ground
9. Monochrome detect
10. ground
11. (n/c)
12. (n/c)
13. H sync
14. V sync
15. ECL -

I hope the above helps.

> What is the difference between an Atari 520st and a 1040st?

The 520ST came with 528Kb of memory, the 1040St came with 1024Kb of memory. Keep in mind that when these first came out (1984/85) they provided a lot of bang for the buck :). Add on memory cards became available to take the either the 520 or 1040 to 4megs of memory. Other than the amount of available ram the they were identical.

Although I have a very nice K6 based PC on my desk, I still use my TT030 (Atari's work station) for most of my "serious" computing needs - old habits are hard to get rid of :)

That wasn't my intent at all. I was more surprised after knowing you have been using a PC for sometime that you are not out of date nor rusty in knowledge with regard to these software. I find , that if I am not using the software, I become forgetful. You seem to be abreast of Atari software that you are not currently using. It actually was a compliment. You state that Okami is the best on the Atari and give valid comparisions as to why. Your comparision in my opinion, is worth something to me.

No flames, just discussion. If I want flames I hang out in advocacy.

My 2.5 Meg 520ST is valid. The board would give 520STs 2.5 Meg of useable ram. Some ram boards for the ST are designed to ignore the 512K on the ST and upgrade to 2 meg or 4 meg only. Others allow for 2.5 meg or 4 meg only.

Simms should not be mixed. Um, but that didn't stop me from adding 1meg simms in my STe then placing back in the 256k simms in the open slots, also giving me a 2.5meg STe. For this you need to run a patch program and all in all, its not worth the effort nowadays.

Ref : Internet Access Using Sting

I am trying to get my Atari stfm on the net using Sting 1.22. However, every internet service provider I have spoken to can't provide me with the logon sequence I need for the sting "DIAL.SCR" file.

Can anyone please email me a working copy of their "DIAL.SCR" file and sting "DEFAULT.CFG" file along with the name and telephone number of a suitable service provider (preferably a free service provider).

I assume this is the problem, as so far all I have managed is a carrier detect signal and confirmation of 19200 bps followed by "link negotiation failed" after 37 seconds on the dialler.

Email me at : andrew.williams@rovergroup.com

Note - I can only receive mail at this address, but I will thank anyone that can help me when I can next use a terminal (prefarably my own Atari)

Thanks

Andy Williams

Just putting my two cents in...;-)
IConnect was available with CAB 2.5, dated 01/07/97.... beta testing began
way back in october 1996... so, it's safe to say that IConnect was the first
commercial working and available stack that could handle PAP and SLIP.

BTW: STiNG and IConnect both got PAP implemented the way it should be, one
of the advantages of PAP is that the user doesn't has to bother about script
files... all necessary input is exchanged between the server and the stack.
Why the hell does one needs three scripts to get WenSuite 3.3c working?

Cheers from Belgium
Dennis

From: lafabrie florent <lafabrie@club-internet.fr>
Date: Thu, 20 Jan 2000 17:57:28 +0100

Hello Florent,

>I have just acquired an SCSI Writer CDD2600 from Philips for my falcon.
>Mï¿½tados know it well with file SCSI_CD.BOS. On desktop, my icon
>representing the reader appears well, but impossible of reading CD.
>For writing I haven't problem.
To write a CD, Metados doesn't need to be installed. It is only needed for

reading a CD. I guess you didn't setup the config.sys file correctly.

You need to set up two different Icons.... i.e.

```
; devices
;
; SCSI 4: `PIONEER CD-ROM DR-U24X' -> Y
; SCSI 3: `PHILIPS CD-R ROM CDD 2600 ->Z
;
; BOS drivers

*BOS, C:\auto\scsi_cd.bos, Y:12
*BOS, C:\auto\scsi_cd.bos, Z:11
;
; DOS drivers
;
*DOS, c:\auto\hs-iso.dos -64, O:Z
*DOS, c:\auto\hs-iso.dos -64, P:Y
```

In this example the Pioneer CDR is represented on the desktop as drive P
and
the Philips Writer as O.
BTW: if you don't burn multi session CD's it's better to install the SPIN
package.

Cheers from Belgium
Dennis

1313. Re: Making Atari CD-ROMs

Newsgroup: comp.sys.atari.st
Date: 2000-01-23 00:00:00 UTC
From: Dennis Vermeire <dennis.vermeire@wanadoo.be>
Message-ID: <943917180-198430AEicMi@wanadoo.be>
Source record: 66619

From: halln@c2i.net (Hallvard Tangeraas)
Date: Fri, 21 Jan 2000 11:31:36 GMT

Hi Hallvard,

>Many of the folders contain extensions in their filenames
>(i.e. "MSTERTRK.DEM") and I understand this is "illegal" for ISO-9660
>CDs which I should make.
>Or is there another format I can use?
Any format except for MAC HFS should do, as long as the filenames are in 8+3
format there shouldn't be a problem... if some of the folders or files have
long filenames these will be truncated ie. MSTERTRACK.DEM => MSTERTR~.DEM

>I don't know too much about the different formats, but I know there's
>something called "Joliet" -should I use this? Will it allow folders with
>extensions?
Yes, Joliet will do just fine but as stated above, do make sure there are no
long filenames.

>2) I've got all the Atari files on my Mac, accessed by MagiCMac. Because
>of that I've now got several files/folders with lower case filenames. I
>guess this will cause problems if I try running the CD on a standard ST
>without MagiC or whatever, but plain old TOS.
>I need to change the case of all files to UPPER case -is there a tool
>which can let me scan through a complete folder and look through all
>files/sub-folders, renaming those which aren't in ALL UPPER case?
There's no need for this, GEM will always display the files in UPPER case.
Do watch out for things like test.htm and TEST.HTM, I guess the syntax
checker of Toast will warn you for this.
If you really want to convert these files, then the Jinnee desktop which I
recommended to you before, comes with a plugin for this kind of work...

>I'm going to make the CD with "Toast" on the Mac. I want to make it
>readable first of all for all STs, so some sort of ISO format is
>probably preferrable -I need advice here, considering the above (folder
>extensions). Other than that I'm sticking to the old TOS standard of 8+3
>characters.
As long as you stick to the 8+3 rule, your CD will be readable on any Atari.

Hi Martin-ï¿½ric

>> Martin-ï¿½ric that crazy stuff with your postings is happening
>> again! this posting arrived with a text attachment. Should I
>> reply twice or are you gonna kick some Finnish buts?
>
>Those butts to kick might not be Finnish at all.
You're right, I just compared the two headers... once again we will have
to kick some American buts ;-)

This is the "faulty" one, with the posting attached as a ACII attachment:
Path:
news.wanadoo.nl!news2.euro.net!netnews.com!newsfeed.berkeley.edu!
newsfeed.stanford.edu!paloalto-snf1.gtei.net!news.gtei.net!enews.sgi.com!
sdd.hp.com!col.hp.com!Marlborough.STD.com!col.hp.com!cello.hpl.hp.com!
hplabs.hpl.hp.com!news.sri.com!newsfeed.stanford.edu!arclight.uoregon.edu!
newsfeed.mathworks.com!news.mathworks.com!uunet!nyc.uu.net!ffx.uu.net!
nntp.inet.fi!central.inet.fi!inet.fi!read2.inet.fi.POSTED!not-for-mail

This is the "correct" posting
Path: news.wanadoo.nl!news2.euro.net!news-x.support.nl!newsfeed.icl.net!
news.algonet.se!newsfeed1.telenordia.se!algonet!newsfeed1.funet.fi!
nntp.inet.fi!central.inet.fi!inet.fi!read2.inet.fi.POSTED!not-for-mail
~~~~~~~~~~~~~

nntp.inet.fi posts your messages sometimes to the American ffx.uu.net
server, from there on it's distributed over several other servers. Tracing
the message over all those servers is not easy. Moving up one server at
a time I found your last "normal message" at the news.sri.com server. Not
all servers can be accessed, I suspect that the col.hp.com is the guilty
one, it received your message, doesn't know what ISO-8859-15 is, and
distributed it to Marlborough.STD.com to get converted, it was then send
back to col.hp.com, from where it was then distributed the normal way.
Why nntp.inet.fi posts your messages *sometimes* twice at the same time to
different newsservers is the big question...

To stay on topic ;-)
>> Don Shoegarth is not Finnish, he would be after the English
>> release that comes with the English keyboard layout.
>
>Note that there are four types of "english" keyboard layouts,
>on Atari. Only the UK and US ones are covered by Magic.
Oh boy, that's nitpicking... all it takes is a small sys file or use a
~~~~~~~~~~~~~

program like CKBD or Mobzkey which will give the user over 23 different
keyboard layouts.

>>>It's also available with English resources and docs, and remains
>>>easy to get a hold off, if you order it from a dealer who is
>>>still _actively_ supporting Atari.
>>Ahhh, I suppose you mean that friendly dealer from the above

>>N.AES are you talking about? certainly not the latest... you're
>>not advising N.AES 1.2 to Don, are you?
>
>2.0 is available from a number of Dutch, German and Swedish
>dealers.
I suppose I'm ignorant, but there's no N.AES 2.0 available in
English with English manual from neither the Dutch or the German
dealers (at the moment).

>> If you buy a commercial release you have 80% chance it comes
>> from ASH. Emailer, Jinnee, Chatter, Papillon, Phoenix, Fiffi,
>> Artworx,... etc all take full advantage of MagiC.
>
>More than half of those are I-Connect apps. As for the others,
>N.AES features the appropriate wdialog functions, so it works.
Where or when have I mentioned wdialog? there's more in life then
wdialog, i.e programs that come with bubblegem help files that are
programmed with the new BGH package, need the BGH shared library
installed. Please tell Don Shoegarth how "easy" it is to install
these under MiNT/N.AES.

>> What kind of Atari dealer will not order ASH or System
>> Solutions software for his clients?
>
>The kind that is not interrested in purchasing with SysSol,
>because of the exorbitant rates on ASH or other exclusive stuff.
Hm, exorbitant?
MagiC 6.10 which is a full OS replacement costs 199DM, 149DM for
Power Users and 39DM for an update... would you care to inform us
about the N.AES price policy please, which after all is *only* a
AES replacement.

BTW: When ordering from SysSol on a monday, the goods will arrive
here by registered mail before the week is over. I don't mind
paying a little more for good and reliable service, do you?
When ordering from ASH, it will typically take 10 days for your
order to arrive, when registering the software, you get access to
the mausbox where you get a year long access to *FREE* updates and
bugfixes. When living abroad, writing a *English* mail to Oliver
Buchman explaining him that telephone costs would be astronomical,
you'll receive the update by email....
Would you care to inform Don Shoegarth about the service of Woller
please?

Cheers from Belgium
Dennis

The current version is shipped with both German and English resources. The
docs are only available in German though.

MiNT has native support for SLBs, so it's just a matter of copying them to
the correct folder (just as under MagiC).

Yes, it is the simplest and best solution!

>A popular terminal emulator is CoNnect, which is now available free. I
>don't know where it can be found though.

I am using STarCall in this purpose. You can download this program from:
ftp://www.ob.rhein-ruhr.de/pub/atari/star
The previous version of STarCall (2.6) seems to be more reliable than
the last one (3.0) - on my computer at least.

>You will be able to fit CoNnect onto a floppy disc without any trouble so
>no hard disc drive would be necessary.

This same with a STarCall.

Sorry for being the wiseguy....t's probably just a misprint, but the 520
was delivered with 512Kb memory.

Beside this there were a lot of different models of 520 and 1040, for
example 1040 STFM (drive-unit integrated and RF-modulator) and so on........

Tony Greenwood <tony@webscripts.org> wrote:

> hmm But all the Cab ones also seem to have the word "Atari" so maybe
> look for that instead?

No, not all the ones with "Cab" have "Atari" present (for instance STinG's overlay when it's not faking Netscape). The only common thread is that they all use "Cab" or "CAB".

Here's the script based on your comments. The lines "read(STDIN, $buffer, $ENV{'CONTENT_LENGTH'});" and "$user_agent = $ENV{'HTTP_USER_AGENT'};" weren't needed as you suspected. Also the switch for iCab was removed because it's redundant (there are no variations in this case):

```
#!/usr/local/bin/perl

$cab_html_page = "http://www.somewhere.com/atari.htm";

$not_cab_html_page = "http://www.somewhere.com/other.htm";

if ($ENV{'HTTP_USER_AGENT'} =~ /iCab/)
{print "Location: $not_cab_html_page\n\n";}
elsif ($ENV{'HTTP_USER_AGENT'} =~ /Cab/i)
{print "Location: $cab_html_page\n\n";}
else {print "Location: $not_cab_html_page\n\n";}

exit;
```

Thanks for the optimization.

1329. ATARIFAX-TELEOFFICE-YEAR 2000

Newsgroup: comp.sys.atari.st
Date: 2000-01-23 00:00:00 UTC
From: Karin Ernst <Ernst_Frahm.Berlin@T-Online.de>
Message-ID: <86deg2tne1@news01.btx.dtag.de>
Source record: 66736

Please, help me!
My ATARI-Software TELEOFFICE Version 3.04 (TKR) don´t know the year 2000
and I can´t use the fax-program since this disaster.
What can I do? I was so proud, that my old ATARI was online.
But now, all is over or.....?
TKR has had no support for me.
Who can help me?

I wait for good ideas!

Christian Frahm, Berlin/Germany

1330. Audiotracker please HEEELP!

Newsgroup: comp.sys.atari.st
Date: 2000-01-23 00:00:00 UTC
From: xmusic@my-deja.com
Message-ID: <86di5kkqn1@nnrp1.deja.com>
Source record: 66737

Hello ATARIANS!
I'm using Audiotracker v.1.66 mainly for
live drums recording,4-6 channels,then export
to Cubase Audio.I noticed that the problem is
not the number of tracks I'm using.The Data
Transfer Rate slows down after one-two rec/play
sessions...At the beginning the DTR is ~1512kb/sec
with my IBM SCSI HD(ext).After recording/playback
the structure menu shoes a mere 600 or 815 kb/sec
You know "Hd too slow Blah-blah etc.
My system is C-lab Falcon/14
mb/FDI/FA8/MO4/JamIn8/CUBASE AUDIO
2.06/WAVEMASTER/AUDIOTRACKER/ HDD DRIVER 7.56/and
more.
What can I do?I've tried many configs,Auto
folders,etc Thanx(don't have e-mail by now)

Sent via Deja.com http://www.deja.com/
Before you buy.

>mail, one in each mail box.

I have noticed that problem with v1.25b and 1.26b. Dropping back to
to v1.24b solved that problem. I have mailed Atack about it.

>I have been using Newsie for a long time so it may take a while
>to adjust.

I must say I like aMail. It just appeals to me for some reason.

It has improved a lot and with the recent, simple, introduction of
News as well it looks like it could get a whole lot better.

Rich.

>to get help resolving them, or at least find out if others are
>encountering the same problems!

As you know, I'm having the same problems at PayBax BBS (Forem). I'm set now in the year 1989.

BTW: PayBax BBS has been running an Atari BBS for 12 years now, but we had to change the phone number this week:
302-454-7797

Has anyone heard from ACORN.BBS? Since the bug struck his BBS goes unanswered.

We all need help!

: this? Serial cable? Parallel?

It sounds like you need just a terminal emulation program of some kind and
a null-modem cable to connect to the UNIX box.

A popular terminal emulator is CoNnect, which is now available free. I
don't know where it can be found though.

You will be able to fit CoNnect onto a floppy disc without any trouble so
no hard disc drive would be necessary.

From: mb@gem.win.co.nz
Message-ID: <ForM0y.1w@gem.win.co.nz>
Source record: 66741

Not about the ST, but still relevant to this newsgroup, I think: I have lately made a small WWW page about the Atari Portfolio palmtop computer.

The URL is: http://gem.win.co.nz/mario/pofo/ .

Presently there is some information about upgrading the RAM and a clock program that I have written. However I might add more useful information later.

I would be particularly interested to hear from anyone else who is making hardware or software for the Portfolio or who would like to talk about the Portfolio.

Ah, but why use Atari OKAMI when you can use Outlook Express:-).

At least your information is very sound with regard to Atari NEWsreaders. I look forward to setting up OKAMI on my ST. There are just too many good things said about it to overlook the program.

Later Brian.

Just thought I would add. I believe HS modem will be necessary for such transfer rates. 19200 is the maximum a stock ST can do.

You will require the DRIVEN.PRG and the MFP.PRG programs from HS MODEM to be placed AHEAD of STING.PRG.

As for further mods. A hardware mod can get the serial port up to 34800.

Finally, sometime RSN will be an ethernet adapter for the ST. I believe this would be a luxury in your situation vs a need.

Hope this helps.

Brian.

1338. Help! TT power supply kaputt

Newsgroup: comp.sys.atari.st
Date: 2000-01-23 00:00:00 UTC
From: db361@torfree.net
Message-ID: <ForrH0.6Mv.0.bloor@torfree.net>
Source record: 66745

I tried to post this in the NG the other day, but it didn't come up in the list the next time I logged on. Perhaps the internet ghosts ate it, or maybe my local server refused to display it. Sorry if it is the same message twice.

Anyway, my beloved TT030 won't boot, as the power supply has gone the way of many other power supplies purchased by the Tramiels from Taiwanese factories. Is Best Electronics the place to seek a replacement? ChroMagic? I'm back to my old 1040STe until this situation gets resolved.

Thanks, anyone who replies.

In article <943917180-198430AEicMi@wanadoo.be>,
Dennis Vermeire <dennis.vermeire@wanadoo.be> wrote:

> Any format except for MAC HFS should do, as long as the filenames are
in 8+3

Mac HFS will also work fine, Spin! handles HFS without problems. Long
filenames isn't a problem either.

> Yes, Joliet will do just fine but as stated above, do make sure there
are no
> long filenames.

Again, long filenames works perfectly with Joliet. Just be sure that
you have Spin! > 0.34. Hmmm, it's possible that 0.34 is the last
released version, I'll have to check this out... 0.34 has a bug that
prevents it from reading the long filenames on Joliet-CDs made with
certain CD-software (like Easy CD). It will read the 8+3-names though.

> >I'm going to make the CD with "Toast" on the Mac. I want to make it
> >readable first of all for all STs, so some sort of ISO format is

As long as you can run [BM]etaDOS and Spin! on it, any Atari will read
HFS- or Joliet-CDs. To actually *see* long and/or mixed/lowercase
filenames depends on your desktop and/or fileselector. Spin! will
automatically truncate the names if necessary.

> As long as you stick to the 8+3 rule, your CD will be readable on any
Atari.

Again, as long as you're using Spin! you can safely use HFS or Joliet,
and you won't have to worry about long filenames.

Another point would be to use HSMODEM7 for compatibility. As far as login
scripts are concerned, calling in to your ISP with a terminal program will
show you what the prompts are to base your responses on. Hope this helps.

Source record: 66549

Hi,

Bengy Collins has problems getting messages posted here, so he asked me to take care of it.

MagiC Online is back online since last week and is from now on hosted on the German atari-computer.de server. This is not temporary, MagiC Online will not return to atari.org again. Please make the correct adjustments to your hotlist.
The new URL is http://bengy.atari-computer.com, Bengy is very busy getting the site completely up to date right now...

Among a lot of new information, an exclusive bootpicture of the Milan II is showed... (looks really great!!)

Bengy can be contacted at mailto:bengy@home.com

Cheers from Belgium
Dennis

From: Stephen Moss <sgm23@eng.cam.ac.uk>
Message-ID: <86h6lu$c8d$1@pegasus.csx.cam.ac.uk>
Source record: 66550

As I did not see this message appear on this group first time I sent it I have posted it again.

With the recent demise of some Atari related magazines I was wondering how many Atari related magazines/newsletters are still out there.
If you publish an Atari related magazine perhaps you could spend a few moments to answer the following questions.
PLEASE mail your answers directly to me by the end of the month, there is no point clogging up the
newsgroup with your answers and I might miss the odd reply among all the other postings.

1) Magazine Name :
2) Format (web, e-mail, printed) :
3) Coverage (ST, Falcon, Jag, Lynx, VCS) :
4) Number of Subscribers:

You do not have to answer question 4, but it would be useful.

Thanks,
Stephen Moss

1344. How to access a pc hard drive with an atari STe?

Newsgroup: comp.sys.atari.st

I'd have thought that all you'd have to do would be to change the filename of
one of them. AFAIK the list of running apps is based on that, not on an
internal text string!

English RSC and other docs for CoNnect 95 and the later beta 97 are available
from my web site, URL in sig. Both these versions are now free.

There's also a link to the packages themselves, go to the translated apps
page.

I would like to know if there is a mean to read files from the pc hard
>disk with the atari 1040 STe, and better, to save files and execute prg

If you mean directly connect to an IDE drive then no, if its a SCSI, then
you could use a Link2 etc. If you just mean transfer then I suppose there
are two simple options

1) Copy the files onto 720 floppies and load them in that way.
2) Serial link and use a comms package on each side to transfer the files
across (If you will be doing a lot of transfers, this would be the best
way).

Regards,
Greg

1353. FS/T: Atari ST games [01/24/2000]

Newsgroup: comp.sys.atari.st
Date: 2000-01-24 00:00:00 UTC
From: "Michael J. Novak Jr." <use.Reply-To.address@nls.net>
Message-ID: <e9mo8sscfjohgunqfg2q3qeosbt1nr8shu@4ax.com>
Source record: 66560

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 01/04/2000

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection is currently on-line! Unfortunately, there is no
list for this system (cartridge and CD based systems only).

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped! Includes box and manual]:
$ 4.00 Advanced Dungeons & Dragons: Heroes of the Lance (SSI)
$ 4.00 Alcon (Taito)
$ 4.00 All Aboard! (Terrific Software)
$ 4.00 Arkanoid (Taito)
$ 4.00 Art & Film Director (Epyx) -- $4.30 shipping, due to
weight, counts as 1st item
$ 4.00 Art Library 2 (Melody Hall) -- RIPPED SHRINKWRAP!
$ 4.00 Battleship (Epyx)
$ 4.00 BCPL Compiler (MetaComCo) -- RIPPED SHRINKWRAP!
$ 4.00 Blockout (California Dreams)
$ 4.00 Bobo (Terrific Software)
$ 5.00 Bubble Bobble (Taito)
$ 3.00 California Games (Epyx)
$ 4.00 Championship Wrestling (Epyx)

$ 4.00 Cyber Print (Antic Software) -- NO SHRINKWRAP!
$ 3.00 Death Sword (Epyx)
$ 2.00 Devon Aire in The Hidden Diamond Caper (Epyx)
$ 4.00 Dive Bomber (Epyx)
$ 2.00 Dragon Scape (Free Spirit)
$ 4.00 Dynasty Wars (Capcom)
$ 4.00 East vs. West Berlin 1948 (Time Warp)
$ 4.00 Eliminator (Hewson)
$ 4.00 Emperor of the Mines (Impressions)
$ 2.00 Final Assault (Epyx)
$ 4.00 Forecaster III (Greg Kopchak)
$ 3.00 GFL Championship Football (Gamestar)
$ 4.00 Golden Path (Firebird)
$ 4.00 Goldrunner II (Microdeal)
$ 4.00 Hyperdome (Exocet)
$ 4.00 Jupiter Probe (Microdeal)
$ 4.00 Keith Van Eron's Pro Soccer (Microplay)
$ 4.00 L.E.D. Storm (Capcom)
$ 2.00 Lands of Havoc (Antic Software)
$ 4.00 Last Duel (Capcom)
$ 4.00 Leander (Psygnosis)
$ 4.00 Major Motion (MichTron)
$ 4.00 Man Hunter: New York (Sierra)
$ 4.00 Man Hunter 2: San Francisco (Sierra)
$ 2.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 3.00 Metro Cross (U.S. Gold / Epyx)
$ 3.00 Paint Pro (Abacus Software)
$ 4.00 Phantasm (Exocet)
$ 4.00 Powerstone / Elf Lord's Magic (Starsoft)
$ 2.00 Prime Time (First Row)
$ 4.00 Professor Craps (Scorpio Systems)
$ 4.00 Project Neptune (Epyx)
$ 3.00 Quadralien (Spinnaker)
$ 4.00 Rambo III (Taito)
$ 4.00 Red Lightning (SSI)
$ 3.00 Renegade (Taito)
$ 4.00 Rick Dangerous (Microplay)
$ 4.00 RVF Honda (Microplay)
$ 4.00 Savage (Microplay)
$ 4.00 Slayer (Hewson) -- NO SHRINKWRAP!
$ 4.00 Space School Simulator (CRL Group)
$ 4.00 Star Quake (Terrific Software)
$ 4.00 Starglider (Rainbird)
$ 4.00 StarRay (Logotron Recreation)
$ 4.00 Stunt Track Racer (Microplay)
$ 2.00 SwiftaR (Accustar)
$ 3.00 Techno Cop (U.S. Gold / Epyx)
$ 4.00 The Advanced OCP Art Studio (Rainbird)
$ 4.00 The Games (Epyx)
$ 4.00 The Sentry (Firebird)

$ 4.00 The Viking Child, Prophecy 1 (Imagitec)
$ 4.00 Tower Toppler (Epyx) -- NO SHRINKWRAP!
$ 4.00 Transputor (CRL Group)
$ 4.00 True BASIC (True Basic Inc.) -- NO SHRINKWRAP!
$ 4.00 Typhoon Thompson: Search for the Sea Child (Br0derbund)
$ 4.00 Warship (Strategic Simulations, Inc.)
$ 3.00 Winter Games (Epyx)
$ 4.00 Wizard's Crown (SSI)
$ 3.00 World Games (Epyx)
$ 3.00 World Karate Championship (Epyx)
$ 4.00 Zero Gravity (Microdeal)
$ 4.00 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3.20 for the first game and $1.10 for each additional game. Shipping for hardware and accessories depends on weight/distance. Large orders will be weighed as a package, to reduce shipping costs. Foreign orders welcome.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

Not as far as I know - IIRC TOS 1.6 and 1.62 were too closely linked to
the additional colour maps, new sound chip etc. and weren't portable. To
do the upgrade the only real option were 2.06 and the multitasking OS's.

Hi everybody,

Yes, I went to the Cebit's search engine and couldn't find anything
related to Milan. Whoever thinks something could be pulled out, go to:

http://www.globis.de/globis/plsql/starte?
veran_nr=007&veran_jj=2000&sprache=gb

or

http://www.cebit.de/

select english and click on search option.

If you really find something, let us know, because I am starting to
panic :))

Ciao!

Nenad

At least STing works for (almost) all, whereas WS seems not to work for
the most of us. I'm lucky I can get it working but I know some people who
has tried it with at least 3 ISP all with the same result, nada, nopes,
rein du tout, etc..
These guys can make a connection with Iconnect, Draconis and with STing so
why is it impossible with WS?

Are you sure about this? If I've saved it the next time I reboot
and want to access that cpx, STing.acc get killed.
That happens under freeMiNT 1.15.5/N_AES 2.0.0

Right. You can also use 2.06, but this requires some hardware mods
(described in the Quick FAQ).

Why would you want to do this anyway? You'd be better off upgrading the STE,
unless it's broken of course, but then you can always rip some parts out of
the STFM.

Once again, you've forgot to say in which part of the world you are located.
This makes it pretty difficult to recommend a place.

The best places are always online auction sites, personal ads, thrift shops,
cash converters, etc...

I know but you have to set it in the first place. This is less evident than
the script settings in WS, IMO.

This sounds pretty much like what Ghostlink can do. However it is slow, as
it runs over the serial port. There are no other viable options that I know
of, except SCSI sharing, but that might be more expensive than what you are
willing to pay (getting SCSI controllers for both machines, plus a disk).

Details on ghostlink are in the Quick FAQ.

Cross-posted to: alt.atari-jaguar,alt.atari-jaguar.discussion,alt.games.video.classic,comp.sys.atari.8bit,comp.sys.atari.st,rec.games.video.atari,rec.games.video.classic

I have a limited amount of brand new Atari Jaguar items for sale or trade. These packages are ideal for new collector's or somebody wanting to start or add to their Atari collection. If you have any questions, please feel free to ask. I am also willing to trade for certain items, please see my list at the end of this post. All prices quoted are in U.S. funds with the buyer paying shipping.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net?subject=Classic Games (removing the NOSPAM first). Or email
me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800, Colecovision, Intellivision, Classic Computer, Vectrex or Handheld games) sent to you, please specify system.

** Atari Jaguar Packages - Brand New (all contain one controller, RF Box and AC adapter)**
==========
Box conditions vary, best condition boxes will be sold first.
-.Atari Jaguar with CyberMorph cartridge and Composite Video Cable $50
- Atari Jaguar with CyberMorph cartridge $40
- Atari Jaguar (No Cart) $30

** Atari Jaguar Games And Accessories - New/Shrink-wrapped**
==========
- Checkered Flag $10
- Composite Video Cable $15

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).

- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD Unit
- A working Vectrex controller
- A working DSS Satellite Receiver with H Card
- Working DSS H, HU or J Cards
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

"Bottom of Wardrobe Sale"

Best offers secures any or all!!

ATARI ST software

View II
Blitz Turbo lead + s/w
Easy Text Plus v1.4 inc Epson LQ fonts + manual
Mini Office Professional - Comms module
Degas Elite (boxed)
Family Curriculum - Creative Computing Module (HyperpaintII, Music MakerII
& FirST Basic)
Terminator 2
Falcon - Classic Collection (inc Mission disks 1 &2)
Powermonger - Platinum edition (inc WWI edition)
Triad Vol 1: Starglider, Defender of the Crown, Barbarian
Triad Vol 2: Menace, Tetris, Baal
Hewson Premier Collection (Exolon,Nebulus,Netherworld,Zynaps)
R-Type boxed edition
Slapfight, Outrun, Speedboat Assassins

Mega Lo Mania boxed (works on Falcon in ST Low)

300 + DSDD disks sold as blanks(!)
Hardware

MicroVitec 1438 Autoscan monitor (14") boxed in excellent condition, any
resolution you like. Offers around £160 (not inc. postage - HEAVY).

Motorola 68882 FPU 20MHz - supplied by Titan - any offers
Nemesis buffer board + free hot glue(!) - offers will be accepted
ASP SCSI Burster cable (never used) - £15ono
Epson SMD-300 3.5" FDD High density - original Falcon unit
Atari 4Mb Falcon RAM board
4 chips removed from Falcon after CT2B upgrade (? Logic chips)
Atari Falcon keyboard (with TT Touch adaptors) fitted in Freekeys unit
needs connector resoldering on PCB for attached TT type lead - Please
enquire if more details required!
Original Atari ST mouse
2 joysticks (Cheetah Mach1 + Zipstick)

Magazines (most inc Reader disks, can't guarantee not corrupted)

Atari World Iss 2-11
Atari ST Review Iss 30,31,33,34 & 35

ST Format Iss 68-79 and 82-86 (the last!)
ST Applications 62-73

Atari Computing - You must be joking, I'll never sell these!!!

Make me an offer on any of the above, desperate for the space!!

Regards
Neil :-).

Nicholas,

>Why would you want to do this anyway? You'd be better off upgrading the
STE,

Well, its not quite me doing it, and I am not quite sure, but he has an Ste
which is no longer in use, and thought that a later version of TOS would
improve hard drive performance and access.

Actually I did recommended just buying an STe as you yourself suggest, but
then, its not as much fun when you have stuff to fiddle with ;-)

1378. Re: Sun ECL Monitor and a TT

Newsgroup: comp.sys.atari.st
Date: 2000-01-24 00:00:00 UTC
From: jba4@po.cwru.edu
Message-ID: <388bdc31.5871089@news.cwru.edu>
Source record: 66637

Alright, everyone, I've come up with the following connections:

Sun TT - pin 9 shorted to pin 10
1 4
2 -
3 13
4 14
5 -
6 15
7 -
8 10
9 -

The cable is sheilded, but not connected to ground pins on each connector. Also, nothing is grounded to the TT's pin 5.

Other posts explain each of the pins. I simply matched signals. Now I've tried this with two monitors and no luck. I believe the sun pinouts are correct, as they were taken from the Sun Hardware FAQ.

What happpens is that the monitor starts showing lines on the screen in a moving lisajous pattern (if anyone remembers their osciliscope stuiff). The Sun monitor only has one adjustment screw on the back. turning the screw makes the lines move faster and dims the brightness. There are no other controls, not even a brightness control, that I can find. The Sun monitor is a model 365-1051. I've also tried it with 365-1016.

I would assume this is some sort of sync or grounding problem. Anyone got any suggestions about this? Thanks in advance!

Because it doesn't! You just select between none, auto or manual. In 99% of cases, you just leave it at none and that's it.

Come on, don't say this is more complicated that the STinG CPX that must be set to active, before activating STinG in the Dialer, then Dialing.

You can use a standard AT powersupply, it plugs right in. The only
problem is to find one that's small enough...

> of many other power supplies purchased by the Tramiels from Taiwanese
> factories. Is Best Electronics the place to seek a replacement?

Yes. But it will probably be made in Taiwan or China ;-)

Btw. I don't understand why Atari's powersupplies has such a bad
reputation. I own many Ataris, and I've never had any problems with the
PSU (except that they don't deliver enough power for extra harddrives
and such). I've had two cases of blown PSUs - the first one was an AT
powersupply I bought for my Falcon, it caught fire after about 10
minutes use. The second was also an AT PSU, one of the caps exploded.

YMMV but Spin 0.34 and Magic 5 are quite able to read long filenames
from Joliet-CDs made with Easy CD Creator. I haven't tested the CDs
under TOS though as I don't have MetaDOS.

Hi Jo Even,

>>Any format except for MAC HFS should do, as long as the filenames are
>>in 8+3
>
>Mac HFS will also work fine, Spin! handles HFS without problems. Long
>filenames isn't a problem either.
Hallvard specificly stated that the CD should be able to run on a plain ST.
A plain ST even with SPIN! installed can't display long filenames. It will
allways display them as truncated files.

>Spin! will automatically truncate the names if necessary.
This is exactly what Halvard doesn't want...

>>As long as you stick to the 8+3 rule, your CD will be readable on any
>>Atari.
>
>Again, as long as you're using Spin! you can safely use HFS or Joliet,
>and you won't have to worry about long filenames.
Halvard are you reading this?
i.e.
The archive of Mint on a joliet CD displayed on a Plain TT using SPIN:
freemint-1.15.4-bin.lzh ==> FREEMINT.001
freemint-1.15.4-bin.tar.gz ==> FREEMINT.002
freemint-1.15.4-src.lzh ==> FREEMINT.003
freemint-1.15.4.lzh ==> FREEMINT.004
freemint-1.15.4b.tar.gz ==> FREEMINT.005
etc...
Although SPIN! can read joliet, rockwell, HFS,... etc it can't perform
miracles, on a Atari under plain TOS the files or folders that do not
conform to the 8+3 rule will *always* be truncated.

>As long as you can run [BM]etaDOS and Spin! on it, any Atari will read
>HFS- or Joliet-CDs. To actually *see* long and/or mixed/lowercase
>filenames depends on your desktop and/or fileselector. Spin! will
>automatically truncate the names if necessary.
Glad you agree for once ;-)
If Halvard for what ever reason doesn't want to use MagiC or MiNT but still
wants to see a reasonable readable directory, he *has* to make sure before
burning the CD that all folders/files are conform with the 8+3 rule.

Cheers from Belgium
Dennis

Hi Jo Even,

>The current version is shipped with both German and English resources. The
>docs are only available in German though.
OK, so it's half English, this is acceptable for a PD or shareware program,
for a commercial package, that isn't really cheap and after all is a OS
replacement I say this is not good enough. Especially because there's no
service either, if one has a problem with N.AES he's stuck unless he asks
for help here.

>MiNT has native support for SLBs, so it's just a matter of copying them to
>the correct folder (just as under MagiC).
Sorry, I didn't realise that MiNT changed that much the last year. AFAIK
BetaDos was needed for this. Good to hear that the MiNT developpers finally
saw the light ;-)

Cheers from Belgium
Dennis

Hi Nicholas,

>Because it doesn't! You just select between none, auto or manual. In 99% of
>cases, you just leave it at none and that's it.
I suppose that all the people that can't connect belong to that 1%?

>Come on, don't say this is more complicated that the STinG CPX that must be
>set to active, before activating STinG in the Dialer, then Dialing.
At least is dials.... but above all thousands of people connected to all
kind of ISP use it and get connected on the net, which is more then can be
said of WenSuite.
StinG is freeware, and apart for MinT-Net it is the most powerfull stack on
our platform... and besides it's not really fair to compare freeware with
commercial software.
Let's compare commercial stacks: WenSuite vs IConnect... this could be
fun!! :-)

Cheers from Belgium

I don't think that Imagecopy is all that reliable under MagiC I'm afraid. I've had several occasions of error messages about memory assertation generated by it.

Source record: 66505

>Where can I boot my Atari 1040 STF from a Floppy Disk?

You should be able to just let your Atari boot up with no disk in the drive, and you should see the interface after half a minute or so (on an STF).

If you saying that you switch it on and just get a blank screen, then I'm afraid your Atari has bit the dust.

Maybe you should clarify this question a little bit more, if this doesn't answer your question.

Regards,
Greg

Now *that's* weird, because when I had this problem and reported it to
Julian Reschke, he found a bug in Spin! which he corrected. However, he
only sent me the MiNT-version for me to test, so 0.34 under MagiC 6 on
my TT still can't read the long filenames on my Joliet-CDs...

It's possible that this depends on which version of Easy CD Creator you
use, I wrote these CD's over a year ago.

[I didn't reply to the stuff above because I feel that this answers it
all]

No, this is not correct. You *don't* need MiNT or MagiC to use the long
filenames, if you're using Spin! under plain TOS, you can still use the
long filenames if you install a desktop or fileselector that supports
them. If your desktop/fileselector doesn't support long filenames (like
the built-in trash in TOS) you will ofcourse get a lot of truncated
filenames. The example you gave was not particularly good though - it's
obvious that the program that generated the Joliet-image did a very
poor job when truncating. E.g. my own backups (made by Easy CD Creator)
of my download-partition has much better 8+1 names, very similar to how
Windows or MiNT truncates VFAT-entries.

But ofcourse, if someone insists on hooking up a CD-ROM to an Atari
that can't run a lightweight desktop like Thing 1.09 they're free to do
that. But why do you need a CD-ROM in the first place then? ;-)

Sounds like a problem with the VDI. What kind of hardware do you have?
Do you have a graphics-card? Do you use NVDI?

I've had some weird, irrational problems with MagiC on my Falcon,
sometimes it refused to load the screendrivers which definitely was
present. A few weeks later I could try again and it booted just fine...

Of course, there is way to use TOS 2.06 on any ST without hardware
upgrade - with TOS loader. Useful especially if you have enough RAM in
machine.

That's not entirely true. The release version of SPIN does not contain
any MetaDOS DOS driver, so it's not really SPIN which defines the
format of filenames. Usually it would be ISO9660F.DOS, and this one
actually *is* restricted to short names.

If you happen to have hs-iso.dos (a commercial driver) or a beta
version of the SPIN DOS driver, *then* you actually can access the long
filenames without MiNT or MagIC.

Well, the release version of SPIN hasn't been updated since, so I can
only conclude that the problem does not occur with all versions of that
writer software.

Hmmm...If just changing the filename will do it then Great!

BTW, I dug out the Atari Manual for SAM, Audio Fun Machine,
Falcon-D2D Recorder and etc. According to the manual, if you are using
MultiTOS and want to conserve on memory by not installing the accessory,
you must have the SAM.CPX installed.

PP,
Firstly, can the TOS version be reversed in case there's a problem with the higher TOS version? Would you know where to get that TOS loader software? My ST4 might like it better than the 1.02 which I believe it has (just says TOS)

Thought I'd give Warp 9 a try again and (to correct myself) NVDI is faster
in screen loading. Made little difference in conjunction with True Image
or APEXJPG.GTP (which overides Warp 9 I guess). But PGS with NVDI just dies!

According to the Atari A-Z manual, the TT monitor connection is a 15-pin
female D type, with the following connections (the connector should show
at least some of the numbers moulded into it):
1 Red (analogue)
2 Green (")
3 Blue (")
4 High res mono out + (this is ECL High, connect to monitor pin 1)
5 Ground (connect to cable shield and monitor p.7,8,9)
6 Red ground
7 Green ground
8 Blue ground
9 Monochrome detect (may have to strap this to p.5/10 ground)
10 Ground
11 -
12 -
13 Horizontal sync (connect to monitor pin 3)
14 Vertical sync (connect to monitor pin 4)
15 High res mono out - (this is ECL low, connect to monitor pin 6)

So you need at least a 5-core screened cable (the pin 5/10 to 9 link
can be made inside the connector shell). A 6-core with a dedicated
ground wire is likely to be better.

In your later message you mention getting only Lissajous traces on the
screen. If these are fairly coarse, they are most likely due to hum
from power line radiation etc. You say you haven't connected the GND
pins to the shield - try it! Also connect pin 5 to ground at the TT.

HTH

The markup used for the sign-up page has a malformed path to the script:

<FORM NAME="form" METHOD="POST" ACTION = "/mailform.cgi">
^
This is not the way one should be introduced to a new ISP.

Well, at least you have Geneva and good ole TOS to use.

I have Magic 4.0 on my TT and STs, and it works just Awesome on the TT.
With the STs, it is very fast but I switch back to TOS on occasion.
I agree with you with regard to the speed of Magic. I don't have 4.0 on my
Falcon as the original owner, told me it caused him grief. However later
versions of Magic are made with the Falcon in mind.

But really, I think the biggest problem with Magic is the manual. Look at
Genevas Manual. Look at Magics Manual. Apparently the German Magic Manual
is something like 255 pages. I know German words are usually larger, but I
still think i am 207Pages in the dark. Luckily with Guys like the D&D crew
around, you should get Magic running to your needs.

I for now am Leaving Geneva on the Falcon. I am using Speedo Gdos and
Warp9, but I think I should have put NVDI on it long ago. This should speed
up Geneva Greatly. As for My TT. It still has Magx on it, which is not in
Neodesks league. I want to eliminate all Magxdesk stuff completely.

Finally, didn't you install Mint as well?

Double finally, I downloaded the version 6 update to Geneva, but haven't
installed it yet. Is there anything I should know before doing this?
I always get nervous when doing an Update.

Later Brian.

Useless fact of the day: the office of CiX is a 10-minute
walk from my house. Apart from that, the only other
"famous" part of this dull area is Tolworth Roundabout,
which was once mentioned in a Monty Python sketch.

I think so, because ECL was commonly used for hi-res
(mono) screens, where a very fast video signal is
required. If it's 15 years old and they were junking
it, though, it's probably not worth bothering with
(that type of monitor from that era would have been
very expensive high-end gear for professional work,
where monitors are generally written off after approx.
3-5 years due to image deterioration (phosphor burn,
electron gun and power supply ageing...), of course,
that depends on amount of use but I'd guess it had
been quite heavily used).

>love to know if this will work with a TT (when I get one)

Try it and see (or not).

Yo Mike,

Take a look here: http://www.internet4free.homepage.com

In the Seattle area there are 13 freebie ISP's duken' it out. Most are just
"Horsepuckey" PC rippoffs. However, there are some good ones. You may need
to sign up with a PC, then setup your Atari TCP/IP stack with the info.
Most use PAP. Some have POP3 email, others not. Ditto for newsservers.
Anyway, all you USA homeboys might check it out...

Maybe just... bad luck ?

BTW, a friend of mine often have problems with MiNT-Net and I-Connect on
the French ISP "free.fr", and no problem at all with STinG. I use the
same ISP and have no problem either with STinG and WS. I didn't test a
lot with I-Connect but it works well (I didn't use MiNT-Net for a while).

1429. More Magic problems

Newsgroup: comp.sys.atari.st
Date: 2000-01-25 00:00:00 UTC
From: nameerf@flash.net
Message-ID: <cc6j4.1474$oX4.238527@news.flash.net>
Source record: 66587

Well, I've had no end of trouble with Magic since I've got it. The newest of them are that often image viewing software (JPEG Viewer, 1st Guide, Vision, CAB, etc.) won't display correctly under Magic. They work correctly part of the time, but often I get a grid pattern of dots under the image viewers and art programs like this:

```
............
............
............
............
............
............
............
```

And CAB shows incorrect colors (i.e. big blobs of a single dark grey and white instead of 16 shades, or speckles of one or two colors with mostly white space, vaguely resembling the actual image). Monochrome works fine, but who wants that?!?!?!

Anyway, I thank those who have helped me get some of the many Magic difficulties under control, and thank those who will bear with me for more! I like the look and speed of Magic, but at this point it doesn't look like it's possible to use it for anything but very limited applications because of its instabilities and incompatibilities. How do you Magic guys do anything with it?! Must know some sort of magic to be able to use Magic! :) Anyway, whatever help you can give me would be really appreciated! Until then, back to Geneva...

I can't answer why the original poster would want to upgrade later TOS in
STF. But I do, and I have an STe as well. I just want to modify all my
Ataris.

TOS 2.0* is much superior to TOS 1.0.

I just can't figure out why the colours look more pastal like in the later
TOS. The early TOS blue is very sharp, whereas later TOS blue looks like a
faded purple. Yuck. I can't get any crisp sharp colours with my MegaSTes.

Shipping could be a killer. Best you find one that is close to you.
STs can be found in many places. Even some remaining Atari outlets still
have STs for sale. I have 13 STs now. Would you like to buy one for $25.

Ben.

There is no ICD. There is only TOM STealing peoples money. It is a
very sad state of affairs. You have been lucky not to get a reply.
He would only take your money.

> ...but doesn't correctly support long filenames.

I don't have any problem with long file names except for those
with a space in the name or other illegal TOS convention (not MiNT).
Using BoxKite I just edit out the space before viewing with IC4. Some
of these Windows people like to write an 80 colum sentence for a
single image file name. A real pain in the ass. At first I thought
this was a problem viewing progressive JPG's or something until I
caught on. There may be some length that isn't accepted by IC4, but it
will read quite a long name. (ex, bertha-butt-oneofthebuttsisteres.jpg)
Another nice dealywacker is you can just drop the images onto the IC
menu and it will display them (be sure to have enough window memory set
aside. It will also ask if you want to append the proper extension if it
is missing from the file).

1443. Sun monitors: the saga continues...

Newsgroup: comp.sys.atari.st
Date: 2000-01-26 00:00:00 UTC
From: jba4@po.cwru.edu
Message-ID: <388f480d.158793431@news.cwru.edu>
Source record: 66451

Alright everyone, I have some good news. The cable I built to interface the TT030 with the Sun ECL monitor now works. The sun monitor is definetly receiving the Atari signal. When the monitor is on, I get some crazy images on the screen, but I can definitely make out the TT boot screen. Actually I can see four of them. That's the problem. It's hard to describe, but four separate images appear on the screen. After taking the case off the Sun monitor and finding the hidden controls, I was able to move the images, but to no avail.

Now I posted this little tidbit of info in comp.sys.sun.hardware to see if anyone there had any input. I have now been warned multiple times that the Sun ECL monitors are fixed frequency. They operate at:

1152x900@66hz or
1600x1280@66hz

And that's it. Now I need to now figure out if the Atari is outputing the signals in thes ranges. I believe the TT operates at 1152x900 in TT high mode. so more specifically the Sun operates at:

1152 x 900 @ 66Hz vert 61.8kHz horiz

Now does anyone happen to know if this is what the TT030 operates at? If it doesn't, then this whole Sun monitor plan just isn't gonna work unless anyone else has any ideas. If the TT does operate at these frequencies, I have some more work to do. Anyway, any further input is appreciated! THanks!

Hello

Reciently got a used Mega STe and am trying to figure out a few
settings on it.

It came equipped with 2 megs and I'm trying to update it to 4 megs.
I've added the simms to make it 4 megs, but is there a jumper
somewhere I have to move to get it to reconized the additional
memory??

Also, want to be able to use both the installed Seagate 157N (Large 48
meg drive..) and my exteral drives I've been using on my Mega ST.
Is there a jumper or terminitor pack to remove to make it see the
external drive?

Thanks Mike

It depends on what you want to run. TosBox or Gemulator for GEM programs,
WinSTon for games/demos. PaCifiST is good too, but it's a DOS program.

Boxkite reports ImageCopy as an application not able to handle
long filenames and reverts to 8+3, every time.

1450. Nw Soundcard for Milan-Hades

Newsgroup: comp.sys.atari.st
Date: 2000-01-26 00:00:00 UTC
From: "A.A.de Hulster" <aahuls@xs4all.nl>
Message-ID: <948917340-783867AEicMi@xs4all.nl>
Source record: 66458

Hello,
In the French Atari mag "ACC" of January was the following
message :

" We are considering making a soundcard for the Milan and Hades.
It will be Falcon
compatible thanks to a X-tendos driver. Building such a card needs
a financial
investment, we would like to know how much interest there is
among users. It will cost + - 400 French Francs
Technical details :
Codec Crystal CS4321A (HiFi quality)
play-record stereo 16 bits
Formats audio 8/16 bits mono/stereo
Signal non compress or compression ADPCM/a-law/u-law
14 frequencies (5,51/8/11,025/16/22,05/32/44,1/48/khz)
2 x in stereo
1x in micro stereo
1x in aux to mix the internal HP
1x out stereo
1x out mono for the internal HP
ISA type card
Dynamics from 85dB for recording to 96dB play

If you are interested, let us know :
Association Promethee
herakles@free.fr
http://herakles.online.fr

Well, I hope all the existing and future Milan-Hades users will
respond !
Dan

Mike,

No jumpers for the RAM upgrade, just plug in the SIMMs and you're all set. TRUE plug-and-play! ;-)

You can plug in your external hard drives, but you will probably have to reset the SCSI device numbers on them if they were used on another Atari system. The internal drive in the MegaSTe is most likely set to device #0, so you should set the external drive device numbers starting with SCSI #1, etc.

Leave the SCSI terminators on the internal drive, and make sure they are installed on the LAST device in the SCSI chain as well, and removed (or turned off) on all other devices in the chain, if you have more than one external SCSI devices.

Sheldon

I'm afraid Martin-ï¿½ric speaks the truth. It surely doesn't support long
filesnames correctly.

>caught on. There may be some length that isn't accepted by IC4, but it
>will read quite a long name. (ex, bertha-butt-oneofthebuttsisteres.jpg)

I strongly doubt that a filename like this is supported completely. On my
Hades IC4plus dies with a 'address error' when I try to view by means of
the fileselector call a file with more then 18 chars (extensions included).
However when drag & drop IC supports names up to 43. With more IC load the
image but the display is completely wrong.

This sounds like an interesting proposition and
average-home-user-friendly price.

>Technical details :
>Codec Crystal CS4321A (HiFi quality)
>play-record stereo 16 bits
>Formats audio 8/16 bits mono/stereo

>2 x in stereo
>1x in micro stereo
>1x in aux to mix the internal HP
>1x out stereo
>1x out mono for the internal HP
>ISA type card

Most of the above specification is part of the Crystal
CODEC's functionality, which is simply A/D and D/A
conversion. I'm sure many Hades and Milan owners would
welcome this facility but I think to be really interesting
(and really compatible with the Falcon) it needs DSP,
especially to manipulate audio data without burden on
the host CPU (which are not really designed for signal
processing).

What about multi-channel I/O? Will it have a Falcon-style
DSP port for plugging in external signal convertors or
breakout boxes? Sure, this is getting more high-end, but
if users do want to connect to other equipment, the sound
card is the most typical way to provide the interface.

The CODEC chip could be incorporated onto the Milan II
motherboard at relatively little extra cost and would
save on small-run PCB (the ISA card) fabrication costs.
Of course, that would unfortunately exclude Milan 040
and Hades, which are already out there in the hundreds.

It will be a difficult choice between designing a card
which offers a basic function which is missing on all
these machines, and one that costs more but offers
more possibilities that Falcon users are accustomed to
(synthesis, analysis and recognition, software
encoding/decoding to accommodate new formats, real-time
effects processing...) and perhaps want more of (extra
channels, higher resolutions...)

>Dynamics from 85dB for recording to 96dB play

Nice, but please don't even think of making a bass-boost
circuit!

1458. Mega Ste 4 and MORE for sale.

Newsgroup: comp.sys.atari.st
Date: 2000-01-26 00:00:00 UTC
From: Don Schmidt <dschmidt@pacifier.com>
Message-ID: <388fdf8c.0@news.pacifier.com>
Source record: 66466

The time has come for a new owner for the Bear Cavern BBS's equipment.

The following Atari equipment and software are for sale for $500 plus handling and shipping.

Optional: Will include an APC BackUPs 400 UPS for an additional $40 plus handling and shipping.

1 Atari Mega 4 STe equipt with 50 MB hard drive, Ajax chip, 1.44 floppy drive. With a JinMouse (better than an Atari Mouse).

1 Atari 14" swivel base monochrome monitors.

1 Atari SC1224 color monitor.

1 1.1 Gigabit Seagate SCSI Toad Tower Hard Drive with Adaptic card.
Built in the same box, a Viper 150 (uses 250 mb tapes) Tape Drive.
This hard drive is the one used with the BBS and contains several hundred Atari, MSDOS and Windows files.

1 540 MB Quantum hard drive with an ICD II adapter.
Built in the same box, a Viper 150 (uses 250 mb tapes) Tape Drive.
Built in the same box, a 750 kb floppy drive. The floppy is good but the cord length makes it unreliable. Best to remove it and use it as intended.

The BBS software is BB/ST by Quantum Microsystems. Old but reliable.
The program has been improved by Anthony Watson (Mountain Software), improving the file library and the File attached Mail.

Maintenance software on the BBS includes, Diamond Edge, Diamond Back, ICD Pro Utilities, SCSIWAIT 3.

Two external SupraFAXmodems, 1 v32.bis and the other 33.6 (these are the ones with the display)

Dozens, if not hundreds of 750 kb disks with commercial software, Magazine files, and STReports downloads and manuals. (Also the Best Electronics catalog).

Cords, powered monitor switch (will switch from one monitor to another including the AC)

Mega STe Field Manual

Lots of software

MH> Reciently got a used Mega STe and am trying to figure out a few
MH> settings on it.
MH>
MH> It came equipped with 2 megs and I'm trying to update it to 4 megs.
MH> I've added the simms to make it 4 megs, but is there a jumper
MH> somewhere I have to move to get it to reconized the additional
MH> memory??

I'm not aware of any jumper that has to be moved. The Field Manual doesn't mention a jumper. Just that ram needs to be added in pairs. Either you can have a 2 or 4 meg system.

MH> Also, want to be able to use both the installed Seagate 157N (Large 48
MH> meg drive..) and my exteral drives I've been using on my Mega ST.
MH> Is there a jumper or terminitor pack to remove to make it see the
MH> external drive?

I belive all you need is a Link between the external HD and the computer and of course a different SCSI ID number.

... Life is so uncertain. Eat the desert first!

Same here under MagiC-PC. It seems to hate dealing with GIFs in
resolutions with more than 256 colours: trying to select a transparent
colour causes all sorts of error messages to scrawl over the screen,
usually followed in short order by a destroyed system if you don't
reboot pronto. This is the same with the latest beta.

> knowledge with regard to these software. I find , that if I am not
using
> the software, I become forgetful. You seem to be abreast of Atari
software
> that you are not currently using.

I try to keep up, because I'm interested and still an enthusiast for
things Atari. The fact that we have a choice of internet software on a
platform deemed to be dead and buried by the ignorant is extremely
satisfying. That said, I can't try everything out like I used to
because of time constraints, so for example I'm considering pulling my
opinionated Atari net software page, or at least truncating/altering it
as some programs are now much further along in the development cycle and
others have bitten the dust..

I shifted platforms for a variety of reasons specific to myself, but
over time I have accumulated some Atari knowledge and if it's of use to
people I might as well contribute it back into the pot as required.
After all, I have good reason to be thankful that other Atarians here
have shared their knowledge over the time I've been subscribing. Plus I
like the company in here for the most part!

The current version is up to 4.2b1, AFAIK. Works well with MiNT and
NAES. I think upgrades to those versions (there are a couple available
on the web site) are free, or at least almost free. Personally I
couldn't live without it:) I does work well under the current version
of MagiC Mac, but I don't use MagiC on the Falcon, no advice there.

Like I've explained previously, it's MetaDOS and the CD-driver that
determines whether long filenames are supported or not, *not* MiNT, MagiC
or TOS.

> Anyway, as another posting of mine explains in this thread, i've made a
> CD with success and it seems to work just fine on my Mac. I made it
> under the format ISO-9660, choosing "allow MSDOS names".

So did your CD-writing software truncate the names, or did you do it
yourself? If it was the CD-software, you could just as well have used
Joliet and kept the long filenames for your MagiC- or MiNT-setup (or Mac
for that matter) and had the same MSDOS-names under pure TOS. I suggest
you try this, it'll only cost you one blank CD if it fails.

> Anyone else made a CD with "allows MSDOS names" under ISO-9660 and tried
> it on an ST?

Sure, no problem, atleast with the DOS-driver I'm using (HS-ISO.DOS from
CD-Tools, a very old version).

Hi Ho Charles,

So far these guys work out pretty good. There is a little latency downloading newsgroups, but once it starts it flys. They outsource their news like my other ISP does, but the NNTP connection doesn't drop in two minutes. I was toying around to see what I could get away with, and could still go back and read articles thirty minutes after doing some web browsing. No interupts downloading mail either. Resolve seems to take a bit longer, but overall it looks promising. I had to go back to a dial script, but for whatever reason I get a 44k connection each time. With the local ISP 33K was the norm. $6 bucks less than the local guys, no banners or crap, just a good old connection. Mikey likes it:)

>a different beast? magnetic media is magnetic media, non?

>Why? my understanding: HD drives output a stronger signal to format HD
>disks (more, narrower tracks) whilst DD drives do not put out nearly as
strong

The oxide coating is different allowing a higher density of data to be place
on the disk. This is the only real difference between low and high density
diskettes.

BUT......

If you use preformatted HD disks or use HD disk with data on them, you are
running a high risk of data corruption, as the data may in laymans terms,
overlap, so what you write on your HD drive may not be what you read back,
giving strange characters in text files, or worse, crashing your program
with a .prg file.

Actually, finding "unformatted" floppies these days, is probably as hard as
finding DD, so you may as well look for the DD disks ;-)

Regards,
Greg

Yep. Just need the cabling and connectors. I'd suspect the DOIT
Falcon archive would have this, but I can't recall the address.

Non.

The size of the magnetic particles differs. While a 1.44 floppy can be
formatted to 720K and vice versa, the reliability of the diskette
suffers.

My Atari dealer says its not very user friendly, tricky to install and it also
requires it's own software...
As far as I know Woller is working on another DSP card , the so called Falcon
Kompatibilitaetskarte which will be much cheaper and will allow other Falcon
software to run on the Milan. I hope this is true !

what program was used to create the files?
or
if the files are opened in a text processor, what to the first few
words/lines say?(the header is here, and usually includes the name of
the program)

Unless the STdisks were formatted in TOS 1.4 or earlier, they should be
readable as is on a PC. Definitely from DOS, I've had weird problems
with WindowsNT.
If you can see the files then try to open/import them in Access or
Excel, and see what happens.

Just copy AHDI.PRG to /auto on a floppy. Boot this floppy making sure
that ahdi.prg runs. Then run Hinstall.prg. Hinstall.prg will not see
any partitions until the driver ahdi.prg is loaded first.

On Thu, 27 Jan 2000, Mark van Meurs wrote:

> the zip file using my ST.

STzip is available on just about every Atari FTP site. If you want links to
FTP sites, check out the Quick FAQ.

> I just got my ST, and I have a few other questions. To use a good
> midi/music program, do I need a hard drive? If so, what size is minimal?

Absolutely not. Most Midi programs run from the floppy. A hard drive speeds
things up quite a lot and opens access to other applications. You will need
an interface though. Details in the Quick FAQ

> I'm hoping to get ahold of Cubase, but for now I'm going with the
> freeware. Anyone know any good links?

Freeware sequencers are not very good. Your best bet is to get your hands on
a 2nd hand copy of Cubase. Steer away from pirate copies as they are all
very unstable and buggy.

> What printer's are compatable with ST's? TIA

Most printers are ok, just make sure that it's not one of these 'Optimized
for Windows' (which means Windows only) printer. If you want to do printing,
get NVDI. It comes with drivers for most printers, it handles fonts and it
also seriously speeds up the screen display functions.

Apparently, there is a member of the family who is very ill.

Now I'm a compassionate soul, but this is testing my patience. My dad had a heart attack in October, but I don't use that as an excuse for taking peoples money and not doing my job.

Eclipse was released in June, some people *have* managed to get one. I ordered one as soon as it was announced and the cheque was presented in August but I've had no joy despite several emails and phone calls.

I've got a bit of a dilemma - do I threaten legal action? got to the small claims court? The big problem is that I actually want the product, not my money back.

Can anyone help, my Falcon has got belly up.
When it`s booted up I get my IDE drive, no SCSI but Falcon Processor on SCSI ID 4. Have tried to boot up from floppy without IDE but still the same. Have had to set up my Veloce to get back online. I can get to some of the software on the F. hard drives with the veloce but have some problems with others.
Does anyone know why the Falcon doesn`t want to know any SCSI drive?
There`s some software that is only on the above hard drive, which I`ve not got around to backing up yet. Ya a bit silly.
Thanks for any help. If...

Mike,

This is from memory, I believe that you need to pull 8 jumpers off of the motherboard. They are located in the far right back corner of the motherboard and are just about impossible to get to with hard drive bay cover off. IIRC, there are about 12 jumpers there, you pull the first 8 off starting from the front of computer. Take a look inside the hard drive bay see if this looks right. I can pull the cover on my Mega STe and look if you need me to.

I am also assuming that you have the internal ACSI to SCSI adapter in place to connect to the internal hard drive.

e-mail: atari@benjamin.net

Click for WebSite!

I've added more and will be adding more Hardware, Software, Books and
Accessories for Classic 8 Bit and Atari ST. So checkout what's new on
my WebSite. In Fact, check it regularly as my Catalogs are updated
regularly. Customer's are served, first come, first serve! I have 6
different Catalogs, and my SoftWare Catalogs are my largest. They have
the biggest Byte Count. You should see my inventory! I have TruckLoads
of HardWare, Boxes & Boxes of Software & Libraries of Books & Reference
Material for the Classic Atari 8 Bit & Atari ST! And remember, if you
can't come see me today, come see me tomorrow!

also, if you live in Portland, Oregon, interested in Atari and want to
meet with other Atarians. Read the Ad near the bottom of this message.

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-
Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at
http://www.atari.benjamin.net And Jump to my FTP site linked to my Web
Site so you can Download Free Catalogs or FTP directly to my site at:
ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way,
Feel free to Request catalogs through E-Mail. Really, it's not an
inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both!
Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail.
Please let me know if I can attach text files to your E-Mail. Catalogs
are just regular ASCII text files so you can download them into your
text editor and view them, edit them or print them out! It would make
things easier for me if you take my Catalogs, load them into your text
editor, delete what you don't want and E-Mail me the rest! To expedite
things, include your complete Mailing address so I can figure your
Shipping/Postage & Handling. I'll be back after the weekend.

If you have an Atari and live in Portland, Oregon. U.S.A. or vicinity,
you are cordially invited to attend a Meeting of the Portland Atari
Club. You don't have to be a member to attend. Now we've moved our
meeting to a new night. Same Bat Time! Same Bat Channel! We meet the
2nd Thursday of each Month. Our Next meeting will be Thursday, February
10th, 7 pm at the Pizza Baron at 2604 S.E 122nd Avenue in Portland,
Oregon. We're trying to rebuild our club so we're looking for Atarians

who wan't to get involved in supporting other Atarians. If your interested, call Ben at (503)256-9974 and by all means, come to our meetings on the 2nd Thursday of the Month. For more info, surf the Web@

http://pac.pdxweb.net

e-mail: atari@benjamin.net

For more information or directions, please call our Vice President Ben Smith at (503)256-9974 See you there!

You should know I regularly add more Atari stock items to my catalogs and this weekend is no exception. A list of my new ST Software I just added to my Catalog are listed below. In case your wondering why my Catalogs (below) are formatted to 38 Columns. They are made to be compatible with the lowest common denominator. Also known as the Atari 8 Bit. Once the Classic Atari User converts the Carriage Returns to Atari 8 Bit.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or bensmith@teleport.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Please direct all replies through E-Mail at bensmith@teleport.com or atari@benjamin.net instead of NewsGroups as I don't regularly check NewsGroups.

If you have an Atari and live in Portland, Oregon. U.S.A. or vicinity, you are cordially invited to attend a Meeting of the Portland Atari Club. You don't have to be a member to attend. Now we've moved our meeting to a new night. Same Bat Time! Same Bat Channel! We meet the 2nd Thursday of each Month. Our Next meeting will be Thursday, February 10th, 7 pm at the Pizza Baron at 2604 S.E 122nd Avenue in Portland, Oregon. Get together with other Atarians. Make friends, meet new people, maybe find an old friend. Eat Pizza, drink Pop or Beer in a decorative atmosphere. Bring your family to a family friendly place. For more info try:

http://pac.pdxweb.net

1505. STinG problem resolved

Newsgroup: comp.sys.atari.st
Date: 2000-01-27 00:00:00 UTC
From: John.Kormylo@7861.conchbbs.com
Message-ID: <3e6_0001272231@conchbbs.com>
Source record: 66424
Body handling: HTML body converted to readable text

I found out what my problem was. The ISP uses a text logon instead of PAP after all. I'd be really embarassed if I hadn't specifically asked both the original customer service rep and a technical service rep if they had a text logon. I guess I should have tested it in spite of their assurances.

(Of course, if I<\B> had written Dialer it would have had an Autoscript option that would open a TTY terminal emulator, search for the first $7E byte, then go back and write a script based on the user responses and miminum unique delimiters required to log on.)

Anyway, now I need prove the adage that any idiot can write a web page.

(Another worthless pit in the World Wide Wasteland.)

1506. VME cards

Newsgroup: comp.sys.atari.st
Date: 2000-01-27 00:00:00 UTC
From: claytone@aa.net
Message-ID: <38913f6d_3@huge.aa.net>
Source record: 66425

Hi all,

I recently got a MegaSTE for a backup in case my Falcon ever takes a nose dive. I have noticed an abundance of serial or modem ports. Why so many? (3) One of them is connected to a "VME" card slot. Where can I find more info on the VME cards? What other kinds are out there? Does anyone still sell them? I noticed that Mario Becroft is making a VME graphics card. Is (was) this Atari's idea of those card slots that PCs use?

Thanks for any suggestions,

Clayton Murray
Seattle, WA USA

1507. Re: HELP: Need Mega STe Info

Newsgroup: comp.sys.atari.st

Mega STE should automatically recognize additional memory. At least the
1040 STE does. You need to change the unit ID of your external drive
from 0 to 1 to get the STE to recognize it. This depends on the model of
drive you have. Megafile units have a jumper block on the interface
board, others with SCSI hosts require you to change the SCSI ID jumper
on the drive, or the SCSI ID jumper on the omti adaptor board if it is
an RLL or MFM drive.

This is a bit confusing, because on my Centurbo disk, Cecile is the Hard Disk Driver. Perhaps the name of your audio ACC is different? Or did you misunderstand the purpose of Cecile?

From an ext2 partition, it doesn't see the filename at all!

Anyhow, BoxKite warns that "This application might not support
long filenames. Proceed anyway?" when loading to ImageCopy.

When one knows international payment methods well, anything is
possible. However, banks still have a _lot_ to learn about
implementing cheaper and easier international transactions.

Credit cards can alleviate this when purchasing through a store,
but it has become obvious that a more flexible method is needed
for private transactions.

This is where the needs of average people are already several
steps ahead of what the system has to offer, unfortunately.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,alt.atari

Hi,

Not so long I got an Atari TT030 from a friend of mine. Another friend of me told me there are linux dists for the 68030 processor. So I repartioned the HD with a linux tool (atari-fdisk) and installed linux (Debian). But when it was almost completely installed I came to the conclusion that linux couldn't be placed in the boot sector of my Atari HD so it was neccesary to keep a little space on the harddrive for TOS/GEM. From this space I should be able to start a little program which boots linux.

I wasn't very happy, 'cause by now I knew I had to do the installation all over again. But okay, I like a challenge. So I took a little TOS/GEM utility I saved just before I repartioned my harddisk, called HDX. HDX formatted my harddisk and after that I used it to repartion my harddisk again. When I quit the program my Atari automaticly rebooted. When finished booting I came to the conclussion there still wasn't an harddisk present. Then I remembered I had another little utility which I somehow thougt would be capabele of making my HD usabele. This utility was called HINSTALL, but when I ran this program it told me there was no logical drive present. Can somebody please help me? I by now don't have clue anymore of how to make my harddisk work.

Thnx in advance, Mark

BTW please don't mind my bad English.

>>I've been trying to download some music software to use on my ST, but I
>>ran into 1 problem. The files are in .zip. Is there a program to extract
>>the zip file using my ST.

WinZip or you can get STZip, if you use WinZip unzip the files onto a DD
floppy for use on your ST.

>>To use a good midi/music program, do I need a hard drive?

This really depends which package you get, a second drive at least but a
harddrive is prefreble.

>>If so, what size is minimal?

Hard to say, depends how much you are going to save *and* archive etc. Go
for what you can afford, or at least what you want to budget for.
Also remember you need a hosting case for the drive and a SCSI connector to
connect to the Atari. Look in the papers for a complete second hand set-up.

>>freeware. Anyone know any good links?

I don't know any freeware links as such. Sweetsixteen is a great package,
I'm a registered user this (I Use Cubase VST on my <spit> PC), but
Sweetsixteen leaves loads of free memory for MIDI events etc, and it also
sets the Banks correctly on my DJX, there is a "freeware" version with
certain limitations, on the web page. http://www.ronimusic.com

Cubase eats a lot memory for itself, but has loads of features, you can pick
up copies of this for next to nothing, but don't expect to write a symphony
with it.

There is also a package called Trackman, I liked this one, but I can't
remember where you can get this from, but I believe this is freeware as
well, maybe a search on the web will track it down.

>>What printer's are compatable with ST's? TIA

Any parallel printer is compatible with the ST's interface, but its down to
the software you run, and if it has a driver or compatible driver for it. I
use a Epson Stylus with most of my software, Redacteur Wordprocessor etc,
but I have also used a Hewlett Packard 6L LaserJet which is backwardly
compatible with previous LaserJets.

Hope this helps a little,

Regards,
Greg

As long as you have *any* ground connection, that should be OK.

>What happpens is that the monitor starts showing lines on the screen
>in a moving lisajous pattern (if anyone remembers their osciliscope
>stuiff). The Sun monitor only has one adjustment screw on the back.

Either you are missing the ground for the SYNC signals, or they are of the
wrong frequency. These monitors were mostly fixed-frequency types, and were
available in multiple frequency settings.

It might be possible to adjust the horizontal frequency settings using pots,
adjustable coils or jumpers inside the monitor, because generally one
chassis is used for all versions.

The vertical should not be critical.

Right. Those falcon programs that do not require the DSP should work right
now using the soundblaster card, so another card (even if it has better
codecs) without DSP would not offer much benefits in terms of compatibility.

>The CODEC chip could be incorporated onto the Milan II
>motherboard at relatively little extra cost and would
>save on small-run PCB (the ISA card) fabrication costs.
>Of course, that would unfortunately exclude Milan 040
>and Hades, which are already out there in the hundreds.

Hades is a bit more difficult anyway, because it can't do ISA DMA.

IMHO, the only useful thing would be a card with a DSP that makes the whole
sound system really falcon compatible. Stephan Wilhelms StarTrack card does
most of this (and at an incredible sound quality and performance), but it is
not quite low-cost (although the price is adequate for the performance you
get).

Run HINSTALL and select drive A as your boot disk, make sure you put a new floppy in the drive. This will add the harddrive booter to the floppy drive, one of the linux kernals (bootstrap) should also fit on that floppy.

This will boot you into gem and allow you to access any GEM partitions available. If their is no gem partition, run the linux bootstrap from the floppy and then check to see it all the partitions were linux.

Hi, I got my hands on a bunch of very thin floppyu drives. These are about the height of 2 floppies and only little bit wider and longer than a standard floppy. It looks like you could fit two of these inside the case of an st or falcon. Can the falcon access two floppies.

Thanxs in advance.

When I run HINSTALL it says: 'No available logical drive for
installation of driver' after this message it automaticly quits. I'm not
given a change to install anything anywhere.

All my partitons are GEM partitions made by HDX.PRG

I think I just fitted the simms when I upgraded from 2 to 4 MB on
the Mega STe. The Mega ST needed a bit more work though.

Not really. MiNT does not evaluate $SLBPATH, so the SLB file must either be in the current directory, or the application has to embed code to find the SLB file somewhere else.

in my experience this is true for HD disk formatted to DD on a DD drive!
However I have had no problems formatting a HD to DD on a HD drive!
Why? my understanding: HD drives output a stronger signal to format HD
disks
(more, narrower tracks) whilst DD drives do not put out nearly as strong
a
signal and so formatting a HD disk in a DD drive to DD often fails.

Check out www.xprs.net, and look at the support numbers. You will have to call in to register as their web page is having problems with the application form. I think they are based out of Nevada, but service most of California.
No hurry on the Falcon, my kitchen table is covered right now with another project:). I have the 520ST and SC1224 in the garage. If your not off the highway very far, I could just drop it off sometime when we go to the races. Cheaper than UPS.

A few years back Al Fasoldt (?) and I tossed a lot of meaages back and forth trying to get midicom (? - memory's getting rusty BUT my Atari's FINE!!), which was a pd version back then, working properly. Virtually no docs existed and were all in German. In the end I had a <age4ST and a Mega4STe networking with Midi cables via midicom. It was a bit slow but did the job, which was mainly printer sharing. The printer was on the parallel port of the STe and the flags were set for the STe to bypass midicom's hooks and print at full speed. However the ST was also able to print at midi data speed (about 20k/sec, I think). The ports were supposed to be 38.8k, I seem to remember but I suppose there was some overhead in the data exchange. There were also add-ons to later (still pd releases) that allowed port redirection to the lan and comms ports, but by then I was drifting into Mac-land. After MagicMac came out I understood midicom (commercial by this time) was being looked at by System Solutions to allow networking the St to Macs running Magicmac / midicom. However I never heard back from them regarding it eventuating.

Regards

1536. Falcon help needed

Newsgroup: comp.sys.atari.st
Date: 2000-01-28 00:00:00 UTC
From: Janka Gerhard PSE NLT <gerhard.janka@siemens.at>
Message-ID: <38916F37.51E0EA47@siemens.at>
Source record: 66347

My Falcon has CT2b and Wizztronics RAM installed. After putting in the Wizztronics RAM my initial problems (screen flickering a bit because the
old ST RAM was too slow) were gone. Since Rodolphe said that the original
IDE HD should be best thrown away too, I bought a new 3.5" IDE HD. After some troubles with 2.5"->3.5" adapters (Wizztronics adapter didn't
fit, I think because of CT2 modifications; with the use of an additional cable the Falcon didn't boot at all, etc.) I finally have a working cable and the new IDE HD works fine.
However it seems I have damaged something in the process and the result is a highly unreliable machine, independent of whether I use it in slow or turbo mode (or could the very long IDE cable cause problems ?).
Sometimes my Falcon boots okay and I can work for an hour without problems;
sometimes I get two bombs immediately, or later, even after several minutes;
sometimes I don't even get the initial screen but only stripes running over the whole screen.
Has anyone got an idea what could cause the problem and what I could try ?

Anyway thanks for reading the whole lot
Gerhard

You can't install a bootable driver on a floppy disk with HINSTALL.
What you can do is put AHDI.PRG in the AUTO folder of a floppy disk.

There is about a 20% difference in coercitivity, less than that in remnance,
a difference in the number of sectors per track, not a differece in the
number of tracks or their width, and in my machines, a TT with HD drive,
and other machines with Sony HD drives, some of them set to work with HD
disks, drill a hole in the corner of a disk that does not have one, if
I want a HD disk, and cover it up if I want to use it as a DD disk,
using the TLC formatter, which can format a disk with a bad section.

Have done that for about ten years, whenever I wanted to, and have had
no troubles that I can trace to misuse of disks. I remain unconvinced
that there is much of a difference.

MEGA-ST have a MEGABUS connector, not a VME.

Only the MEGA-STE, TT and some clones have VME.

Are you always interested? I could do this if you tell me where to find
version 1.2 (I have only 1.3).

> For example, change the names of version 1.3 to something else like
> SAM3 or something similar. I assume some of the code would have to be
> changed as well so that the ACC and Auto program will be able to find
> one another.
You probably need to change the cookie jar values as well. And if a
program uses SAM to play samples or for SAA files, it can only use one
of the 2 (preferably 1.3 as it has been patched for it).

> There are other programs that I'd like to run more than one copy of
> as well. Is there an easy way to run more than one copy of a program
> at the same time?
Try the next point if the previous ones do not work:
0) Make a backup copy of your program files.
1) First only change the program name.
2) Then also replace the program name where it appears in the program
file by another name (use an hex-editor).
3) Then search for the names of the cookies generated by the program
(given by SCOOKIE.CPX, etc. ask for mail for further instructions !) and
replace them all with other (nor used by other programs) names.
4) No other idea (yet).

I think the original founder played/was interested in Go the japanese game.
The word comes from that. Atari was originally all american.

'Atari' was supposed to be some sort of exclamation used in a
Japanese game - whether it was 'prepare to be attacked' or
'surrender' or whatever, I do not remember.

Audio Tracker is very professional, but unfortunately,
some key parts of the Falcon's hardware relating to
audio recording are not. First of all, forget the
SCSI drives. This is SoundPool's own recommendation.
Only Cubase Audio is stupidly (without foresight)
programmed to insist on a SCSI drive for audio recording.

You should use the IDE for SoundPool programs. NOT 2.5"
drives like that supplied with the Falcon, but a 3.5"
as these give much better transfer rates.

To further increase IDE performance (as well as get enhanced
screen resolutions and faster DSP), install a CENTurbo II
accelerator. I use Audio Tracker (with HD Driver 7.71)
regularly with no problems, and my 3.5" IBM Deskstar IDE 1
never falls below 4,000 Kbyte/s.

>or turbo mode (or could the very long IDE cable cause problems ?).

The IDE interface, like the cartridge port, is an extension
of the 68030 bus, and over-extending either will cause errors
because the long cables act as RF noise antennae, resulting in
bus errors due to spurious interference corrupting the signals.

Don't make the IDE cable any longer than it needs to be. This
may seem difficult because IDE cables are supplied ready-made,
but it's really very easy to customise the length of the cable
to exactly what you need. Just buy a 2x20 IDC plug and crimp
this onto the IDE cable, and use a sharp knife to cut off the
remaining, unused part (very important, otherwise you will still
get errors caused by signal reflections coming back from the
unterminated end!)

>Sometimes my Falcon boots okay and I can work for an hour without
>problems;
>sometimes I get two bombs immediately, or later, even after several
>minutes;

Maybe you got bad contacts on the IDE connector on the
Falcon board. Clean it. Check the solders under the board
are not broken (simply re-solder). The electrical behaviour
of an intermittent joint can be easily influenced by the
surrounding air and components heating up.

>sometimes I don't even get the initial screen but only stripes running
>over the whole screen.
>Has anyone got an idea what could cause the problem and what I could try

>?

Check the following CT2 wires, as they are physically
closest to the IDE interface area and most likely (if
at all) to be damaged:

n13 (VID) going to VIDEL pin 14
n15 (IWR) going to the IDE cable
n16 (IRD) going to the IDE cable

Are they broken?

Clayton Murray (claytone@aa.net) wrote:
: I recently got a MegaSTE for a backup in case my Falcon ever
: takes a nose dive. I have noticed an abundance of serial or modem
: ports. Why so many? (3)

Because quite often users need to connect several devices to serial ports.
I know I often use all of the serial ports on my TT, which has 4.

: One of them is connected to a "VME" card
: slot.

It is not really connected to the VMEbus, only mounted in the same place.

: Where can I find more info on the VME cards? What other

The VME international trade association WWW site has all the information
you could need on the VMEbus (not Atari-specific) via the following URL:

http://www.vita.com/

: kinds are out there? Does anyone still sell them? I noticed that

There are many VMEbus cards available but not specifically for the Atari.
Most very expensive. There were also some Atari-specific cards such as
ethernet adapters and graphics cards but I don't think you can buy these
any more. The Mega STE can only accept 3U VMEbus cards. Others are 6U
cards which are physically larger and have an extra connector.

: Mario Becroft is making a VME graphics card.

Yes, I'm still working on it slowly.

: Is (was) this
: Atari's idea of those card slots that PCs use?

It was not Atari's idea; the VMEbus was around since the early 1980's and
was invented by Motorola and a couple of other big computer/semiconductor
companies at that time (I forget which). VMEbus is still used extensively,
especially in industrial electronics, telecommunications... but not
personal computers. The latest versions of the standard include support
for 64-bit data bus and all sorts of other enhancements. It is a very
robust and comprehensive specification.

>
>I've got a bit of a dilemma - do I threaten legal action? got to the
>small claims court? The big problem is that I actually want the
>product, not my money back.

You will probably get neither. Who knows. But starting legal action sooner
than later is advised, whenever one is in doubt about ones lost money.
A registered letter, followed by a letter from a lawyer, followed by the
forms for small claims court and a appearance date, may get you the
attention you require.

Is there any mention of getting your money back? Is there mention of a
product to be delivered? Is the topic always on the illness? This same
person should be able to answer questions 1 and 2 while dealing with 3.

Of course you want the goods. But if there is no intention of delivery,
then I would get your money back. When delivery on the said goods begin
again, then you can try to get the goods at a later date.

Right now, my opinion, leans toward another loss in the Atari Market. But I
don't have all the facts, only what I have read here in the past few
months.

Later Brian.

1557. FA: 2 ATARI 1040 STf Computers Ends Sunday!

Newsgroup: comp.sys.atari.st
Date: 2000-01-28 00:00:00 UTC
From: wardc@concentric.net
Message-ID: <3892159b.45909053@news.mindspring.com>
Source record: 66368
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,comp.sys.atari.st

Two different ATARI 1040 STf computers, up for bids on ebay through
Sunday Night 1/30/00.

They both power up and the floppy drive spins, but are untested
further.

The first one is in good shape despite some yellowing, see a photo and
description at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=248001177

The other is also nice but missing four keys, see a photo and
description at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=248000462

Both bids start at $5.00

Also see lots of other stuff up for bids while you are there.
http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=cosmictoys

Thanks for looking!

>Ok, there are NO power cables, no data cables, nothing! Anyone know where I
>can get htis stuff? eBay hasn't been much luck lately.. :(

I believe you have an early 520ST. Do you have an INTERNAL DISK DRIVE? If
not do you have an EXTERNAL with SF354 or SF314 written on it?

If you have a 520ST with external drive only.

You require.

PowerCable with Powersupply that goes into the computer.
Powersupply for External Disk Drive.

Colour or Monochrome monitor. Colour for games, mono for serious. Mono
can't run many ST games. Many Thousands that is.

You can get a RF cable. The RF modulator should be built in. However some
very early 520STs didn't have this either. This will allow you to use a TV.

You will require a cable between the computer and the floppy disk drive.

Your best bet is to find these cables and powersupply hopefully for free.

It is not unusual for a 520ST to be hooked up properly, only to not boot up
properly. It won't go to the desktop.

So, you may have to open the case and press down on most of the chips. Many
will be most certainly loose. I have a whole bunch of 520s that require a
helpful prodding to get back into service.

At this time I don't have any spare cables, or i would send you them.
However, all my 520sts are working, and I have plans made for them.
For the time being, they are busy with a MidiMaze link and a STunttrack
racer link:-).

If you are in a rush for these Items.

Try.

http://www.myatari.com/
http://best-electronics-ca.com/

If not keep searching as 520STs are usually free to very cheap.
If you get your ST working. Go to this URL for Software to begin with.

http://www.umich.edu/~archive/atari/

Hope this helps
Later Brian.

I have a power supply of the correct voltage and amperage. The end
connector might need to be replaced, though (I'm not sure). Send an
offer to k@uia.net.ca.us but remove the .ca.us part if you are
interested. Otherwise, you'll have to start haunting the electronics
supply shops.

Message-ID: <05108cf7.37ed7b58@usw-ex0106-046.remarq.com>
Source record: 66376

I am trying to connect my 1040Ste (master)or Falcon to my DOS PC
(slave) using a serial cable and "Ghostlink" software. I can not seem
to get it to work.
After setting up the STMASTER.PRG and "install" it on the Ste, I do not
get any icons on the GEM desktop. How am I going to get them to appear.
Using my Falcon I can use the "Install devices" feature. This gets me
the Icons I need, but when I click on one of them I get the "busy bee"
and he stays busy until I re-boot.
I am booting my PC in MS-DOS mode if this makes a difference (?). Also,
I configure the RS-232 setings using the "control panel" on the STe at
9600baud and configure the Falcon using the STMASTER.PRG's "Modem port"
and "115200baud speed".
Any ideas?

Thanks,
Bytor- Nashville, TN USA GoTitans!!!

Source record: 66377

The word Atari comes from the Japanese game of Go. It is the equivalent of check is in chess. The company was founded in 1972 by Nolan Bushnell. Nolan originally wanted another name for his company. He wanted the name synergy but it was already taken so he chose Atari instead since he loved to play the game go.

Atari itself has always been an American company. It was first owned by Nolan Bushnell, then sold to Warner Communications, who later sold to Jack Tramiel of Commodore computer game, who then sold it to JTS Enterprises (Jack Tramiel Systems?) and finally Hasbro Interactive bought the rights to Atari's legendary series of games from JTS.

You can find out more about the history of Atari by visiting http://www.atari-history.com

Hey everyone,

I have read that my Mega STe has an internal SCSI interface.
Does that mean I can replace my built-in 50MB drive with any (internal)
SCSI drive? Would I need to do anything special?

Just wondering,
Laurence

Obviously the best way to proceed would be to report these bugs to the
author - if I could reliably produce the bug I've found that would be a
start!

I've been able to download upgrade patches directly from the Imagecopy
conference on CiX, and this (4.2b2 Plus) is the latest version, and is the
same as the one that is currently sold by the FaST Club.

Well, even if it does that's still limited in comparison to MagiC and
MetaDOS which evaluate the path list from SLBPATH (which might be
different for every process).

Power cable should be pretty standard, unless it is one of the old STs with an external power supply and no floppy. I don't know what you mean by data cables, but the most difficult one to find might be the monitor cable and external floppy drive cable. Have you got a monitor ? Have you got a floppy drive ?

If you have neither monitor, cable, mouse, power supply, then it might not even be worth salvaging. A 520 can't do much nowadays anyway, except play (old) games.

No, Atari was founded by Nolan Bushnell in the US. "Atari" is a word used
during the japanese game of Go, when you are going to win. Bushnell was a Go
player. That's it.

Hi Clayton,

yup, some Atari's can be connected by a variety of connectors. TT's
have 4 serials plus a LAN socket. Biggest trouble is that a lot of all
those ports only connect at "Atari-standard" speeds. Your serial
sitting in the VME slot is not connected to the VME bus but to a plug
on the motherboard. The VME card was indeed Atari's concept of an
expansion bus. I don't think they made use of it on their own
products. 3rd parties did, mostly graphic cards, and the (in)famous
Riebl was for networking. I don't think there is anyone still selling
them these days. IF there are still unsold copies they must be lying
around gathering dust at forgotten places. Sometimes people sell their
stuff 2nd hand. You'd become another one in the bunch of hunters for
gfx cards then :-)

I would almost have to image your using HD Driver and have in the
settings the Falcon as SCSI ID4. You need to change that to ID 7 (if
for no other reason than convention). If HD Driver is setup to scan
for the ID your Hard disk is set to, it should see it if all was working
well before. I may be wrong, but I don't think you can set the Falcons
SCSI ID with any of the NVRAM tools. Anyway, that would be the first
thing to check from what you are saying.

The VME slot was originally for future expansion. It existed in the MegaST as well as the MegaSTe lines, but was concealed by the case in the MegaST's.

There were a number of actual or rumoured and actual devices aiming to use the slot. In my Mega4STe I have a Crazy Dots VME card installed (the LAST one from Dan Wilga, shipped all the way out from the States to New Zealand). There was supposed to be an ethernet card as well and there were a number of other graphics cards made for the VME slot.

After the dust has settled and someone has figured out how to REALLY fix the date with the Atari ST, please let me know!

I have 1040 ST's, STf's and STe's. My hard drives have the ICD clock in them. All of the blasted things keep reverting to 1989!

And the FEW remaining Forem/Turbo SysOps have the problem with the BBS software as well... it won't take the year 2000.

I have TOS 1.2, 1.4, and I don't know what else... but they ALL have problems. I've read "well, if you use patch X you'll also need patch Y, but you can use just patch A unless your TOS needs patch B... and on and on and on.

When someone finally gets an answer, please let me know!

well I think there is something called PARCP, which uses a parallel
port connection to 'network' a PC and ST. There is also another
device I wrote up on for TAF's Phoenix (May'99) on SmartNet by Adyton
Systems GbH in Dresden. No web address in the article but you should
be able to find the web page. It uses a special 'SmartNet' cable
between parallel ports and will transfer up 6MB/minute between an
Atari and PC.

Source record: 66299

Hello...

Would any of fluent German speakers out there care to give me a hand in
translating this 24-page manual?

There is a fellow wishing to purchase this card who would appreciate it
if the installation documentation could be translated. Please contact
me if you would like to volunteer some of your time!

Attached is the manual in JPEG format.

Cheers,
Derek

Yes - the "plus" is printed in a contrasting color on the case. Keep in mind that with the Zip "plus" you MUST use the supplied cable to connect the zip to your SCSI chain. Using other cables can lead to data corruption. Having used both a plus and regular zip on my TT for a long time, I have found that they seem to work best and cause the fewest problems when they are the last device in the SCSI chain. If you run into problems with the computer not seeing the zip make sure that the termination switch on the zip is "on" - sometimes it may be necessary to add an additional passive terminator to the SCSI out port in addition to the termination switch. Remember that the 100 meg Zips can only be accessed on SCSI channels 5 and 6 (I don't know if IOMEGA changed that on the 250 meg units) so if you have other SCSI devices already make sure that you don't run into conficts there.

>

Shouldn't be a problem. I replaced mine with a 100meg Maxtor and later
a 1.2gig (can't remember the brand).

Only problem I had with the 1.2 gig was ICD software wouldn't format /
partition it. I had to do that with Diamond Edge (? - something from
Oregon Research anyway).

On another tack, I knoe Oregon updated the software after my release and
added support for newer drives / media. Anyone know if there are any
update options still floating around ? I see The updates for Neodesk
and Geneva are still out there, so maybe ...

>.HYP file that came with the program.

AFAIK, the author doesn't support Address anymore. Which version do you
have? I have v 2.2 (sep. 30, 1997). I don't use Address but a brief test
shows me that the birthday warning displays the correct timestamp.

Normally you can find the e-mail address in the 'About Address" menu.
Click on 'Shareware' and then on 'Support'.

I can't believe that no one has yet mentioned Bushnell's _second_ videogame company, Sente. You almost certainly played that first pool shooting videogame with the track ball, if you are around my age.

Sente, of course, is the equivalent of "Checkmate..."

Yep, you're right. I found AHDI on an Atari ftp site and when I ran it
it worked right away. Thnx to all who responded!

No, it should be ok. SCSI is SCSI. You will have to disable parity on the
new drive with some jumper settings.

> how did you fix Forems y2k problem! :-)

I'm running FoReM 2.9c and the problem with dates doesn't seem to be as simple as "Y2K". The only problems that I found (Mega STe, TO 2.06, ICD AdSCSI+ clock, ICDTIME.PRG resident clock driver) on Janaury 1 were that the date change option on the sysop menu will not accept an entry of 00 for the year, and the date is displayed as January 1, 19100. WHne it saves files the dates are correct 01/01/00 and they are recognized as the most recent files. Neither of these problems seemed very significant.

BUT, on the 10th of January FoReM began writing "Date change:" continually to the log file while waiting for incoming calls. This obviously causes a major problem by filling up the hard disk partition that has the log on it. So, I suspect the problem is related to the additional digit in the date, but I really don't know for sure.

The last person to have responsibility for the FoReM source code was Bill Turner who used to be in Connecticut. Has anyone heard from him lately?

I also wonder if the 1.0 version of Turbo ST has this problem since it was basically a clone of FoReM compiled with a different C compiler. Any Turbo ST sysops out there???

1622. Re: Atari ST Y2K Bug

Source record: 66326

I tried the Y2K_FIX patch with FoReM and the only evident change
was that it advanced the date 4 years ahead of where it was set (2004
instead of 2000). This is on a Mega STe with TOS 2.06, ICD AdSCSI+
clock, ICDTIME clock driver and FoReM 2.9c.

Some RAM expansions board, with slow Ram, bad layout, made a lot touble
like your description. Best what i know: Ramboard from WB-Systemtechnik
with 60nS (or better) Simm module. Allways the best was CENTram from
Centek, but they canï¿½t deliver not longer.

> IDE HD should be best thrown away too, I bought a new 3.5" IDE HD.
> After some troubles with 2.5"->3.5" adapters (Wizztronics adapter
> didn't

CENTEK IDE modification works with all IDE adaptors if they had an 1:1
layout. Also with IDE adaptors for direct plugin to falcon mainboard.
Both wires from CT2 only had to got in direction of the drive, not
longer back to mainboard!

> fit, I think because of CT2 modifications; with the use of an additional
> cable the Falcon didn't boot at all, etc.) I finally have a working
> cable and the new IDE HD works fine.

Keep IDE wire short as posible, falcon IDE -is- the CPU BUS, anytime !
Signals becomes more bad reflections with long IDE wires.
Longest i tested well: 20cm

> However it seems I have damaged something in the process and the result
> is a highly unreliable machine, independent of whether I use it in slow
> or turbo mode (or could the very long IDE cable cause problems ?).

Shorten f*cking IDE as itï¿½s posible! :-)

> Sometimes my Falcon boots okay and I can work for an hour without
> problems;

Thermical problems. Open case, add heatsinks to videl, combel, dsp

> sometimes I get two bombs immediately, or later, even after several
> minutes;

Trouble with ram.

> sometimes I don't even get the initial screen but only stripes running
> over the whole screen.

-Some- CT2 woni¿½t pick up the blue startup srceen imeditaly.
Press reset imeditaly after switch on.
Try a longer time for powerON reset. (Add capacitor to powerOn circuit)

> Has anyone got an idea what could cause the problem and what I could try

DOITF030 lesen, das kï¿½nnte gar manches klï¿½ren ;)
Auch das mit der Festplatte und der bescheuerten, zumeist ï¿½berflï¿½ssigen
3.5" Platte :/

Centek anyway offers all user new IDE drives.. :/

But..
Original Conner woni¿½t work in TurboMode.
Iti¿½s realy easy and fast to sell new hardware..

A lot of other 2.5" devices works well in any CT2 falcon. Best way for
the internal PSU and the termical aspects in original case.

Watch your internal psu, +12 cani¿½t be charged more as 200mA !!!
+5 looks OK for most of 3.5" drives, but not the +12 DC.

Watch the temperatur of your brand new 3.5" IDE device..

Only only one 40x40mm fan cani¿½t exhaust PSU, CPU and a hot 3.5" device.

Regards, Robert

Hallo Mark van!

MVM>Thnx, somebody else (Lonny Pursell) said that too, but I don't have
MVM>that file (AHDI.PRG)

There should be a file called AHDI.SYS around. Just rename it to AHDI.PRG and
there you go :-)

But, when it comes to AHDI, I haven't used it for over ten years now. First,
I got CBHD from the famous "Scheibenkleister" mass media book, then (in 1994)
Hushi and later on Hddriver. Meanwhile, CBHD is free, so I'd suggest to try
that one.

Trouble is that there are several problems at work here, which need different solutions, therefore more than one patch. You will never get a single solution as there isn't a single problem. Here's a rundown based on your list above:

1 Hardware/OS problem: XBIOS clock

You can test for this using the clock.cpx as described on my y2k page (links to software there too). If you have it the Linkweiler patch should fix it. Please be aware that this has NOTHING to do with the ICD clocks and any problems with them, and if you can it would be a good idea to eliminate them from the equation while testing (disconnecting the hard drives and booting from floppy would be the obvious way).

2 ICD real time clock problems

This can be split into two: hardware and software. It may be that the hardware clocks can't handle 2000, though I don't know how you'd test for it. The software which sets the RTC time and reads it at bootup may not be able to handle 2000, even if the RTC itself could were you able to set/read it. If the software can't handle 2000 then the hardware situation is rather academic anyway.

Either way you will need to find a workaround, and the cartridge clock patch available from my y2k page *may* work for you (despite the name it isn't limited to just cartridge clocks and doesn't do anything directly with hardware). NB if you have the XBIOS clock problem you will need to have the Linkweiler patch installed as well as the clock patch for the latter to work properly (see the y2k page for details about running order etc).

3 Application problems (eg your BBS software)

Even if the computer and OS and RTC are OK, some software has been programmed in ways which cause it to fail with 2000 dates. In this case the only solution is to update or patch the software, which is a problem with old software which is no longer maintained. In this case all you can do is switch to another program which is OK with y2k dates, if one is available.

HTH even if it isn't as simple as you'd like.

Address of y2k page in sig below.

Atari Games for Sale !!!!!!!

E-mail : oscar@agra.fsnet.co.uk

Work in all ST/STFM/STE Machines.

NOTE : All prices (noted with the symbol #) are in UK pounds
NOTE : All games are original, NOT copies !

** OFFER : Buy #10 pounds worth of gear and get any single game FREE

List of Productivity Software/Hardware : (#7 each + shipping in pound sterling)
---
* STOS Maestro Plus (Hardware Sampling cartridge and software included)

List of Compilations :(#4 each game + shipping in pounds sterling)

** (ALL BOXED + MANUALS + ORIGINAL DISKS) **
* Giants
(includes Outrun, Gaunlet II, 1943 and Street Fighter)
* Quatro Sports
(includes BMX, Italia 90, Advanced Ski and Pro Tennis)

List of Games : (#3 each game + shipping in pound sterling)

(ALL BOXED + MANUALS + DISKS)

* Baal
* Batman
* Deja Vu
* Driller
* F-19 Stealth Fighter
* Falcon (Game + Mission Disk Vol 1)
* Galdregons Domain
* Gold Rush
* Heimdall (1 Meg)
* Hook (1 Meg recommended)
* King's Quest II
* King's Quest III
* Quadralien
* Leader Board (Game + Tournament Disk Vol 1)
* Lotus Esprit Turbo Challenge 2
* Midnight Resistance
* Midwinter
* Navy Seals
* Night Breed

* Operation Wolf
* Premier Manager 2
* Rick Dangerous
* Robinson's Request (1 Meg)
* Shadow of the Beast
* Sly Spy - Secret Agent
* Space Quest II
* Space Quest III
* Spy vs Spy (Artic Antics)
* The Quest for the Time Bird
* Transartica
* Uninvited
* Zool

List of Games : (#2 each game + shipping in pounds sterling)

(NOT BOXED ONLY ORIGINAL DISKS + MANUALS)

* Another World
* King's Quest IV
* Leisure Suit Larry II
* Leisure Suit Larry III
* Operation Stealth
* Police Quest II
* Secret of the Monkey Island
* Storm Master
* Street Fighter II
* The Godfather III (Action Game)

List of Games : (#1 each game + shipping in pounds sterling)

(NOT BOXED, (1)NO MANUALS, (2)ONLY ORIGINAL DISKS)
(1)Manuals are not really needed to play these games anyway
(2)Original Disks, we do not sell pirated software,so don't even ask.

* Alien Syndrome
* Crystals of Arborea
* Hard Drivin'
* Indiana Jones and the Last Crusade (Action Game)
* Oil Mania
* Panza Kick Boxing
* Rock 'n' Roll
* Silk Worm (Boxed but no manual)
* Spitting Image
* Strider
* Trinity
* Trivial Pursuit
* Wrestlemania

Actually, my understanding was that "Sente" means successfully
defending against an "Atari" attack.

Rather appropriate considering Bushnell intended to crush his former
company with cutting-edge holographic arcade games.

Of course, that never happened, so he went on to conquer the world as
Chucky Cheese... :)

John,
Sounds good if you can get somebody at the mail server (ISP) that's knowledgeable! What I do (a little time consuming and does'nt always stop the spam) is return it, get back the 'undeliverable' reply and resend that back to the server it originated from (at least I believe it's the original ISP or server). Let them deal with a bunch of crap! Maybe if they get enough re-returns they'll do something about it! (?)

1635. 16-bit d/a for the MegaSTe

Newsgroup: comp.sys.atari.st
Date: 2000-01-29 00:00:00 UTC
From: Laurence Shields <laurenceshields@mindspring.com>
Message-ID: <38936D69.D10BB5CA@mindspring.com>
Source record: 66339

Hi,
Does anyone know where I can get a 16-bit D/A thingie for my MegaSTe?
I'd like to use it when running sample editing programs (Avalon, Zero-X,
etc).
The only thing is, I'd rather not use the cartridge port for it as I
need to use dongles for other programs in that.

Thanks,
Laurence

ImageCopy 4 was worked very well for me. I use it mainly to print out color images. It's as bug free as any software I have used. I've used it first on a Mega STe with the Nova and now the TT.

The Magic/jinnee combination is working very well and is fast! I wouldn't trade it for a 500mhz Windows 98 system :-)

I'll just boot up with Neodesk/Geneva whenever I use the program :-)
Neodesk/Geneva also has some excellent features although not quite as fast.

I'll be using both. I might even try Mint later.

1639. Zubair TOS Upgrade?

Newsgroup: comp.sys.atari.st
Date: 2000-01-29 00:00:00 UTC
From: Schoengarth <dons@qnet.com>
Message-ID: <38939AE9.1694F001@qnet.com>
Source record: 66343

I have a 1040ST with TOS1.0 but, it has a upgrade Ive never seen before. The card plugs into the third ROM slot from the front of the ST. It has a socket for another ROM on top on the of the board, then just to the right there is a ROM socket that is Vertical. This socket has the 3rd ROM in it. The Socket that is on top of the motherboards 3rd ROM socket is empty.

Does anyone have a clus to what this is? It says Zubair on it and has a IC and some other small componets.

Thanks Don

IDE cable should not be longer than 30 cm.
Other problem can be weakness of Falcon's power supply. 2.5 inch drives
work with only 5 V power, while 3.5 ones uses 12 V too. But Falcon's PS has
very limited current at 12 V. You should check is this 12 V falls down by
intensive hard disk activity.

I am going to pick up on the site list. I intended to do it for January 2000. However, I will start with Hallvards list. Then modify it as the information becomes known. It must be nearly one year old by now. However, the list of sites that I normally use are still there. Some haven't had uploads for nearly one year. Not speaking of umich btw.

So lets see if I get something going by February.

Later Brian.

I still don't know what an .eaa file is? There are many database programs
and many different spreads. Could use more information. If you have the ST,
can you click on the file itself and see how the data is formatted at all?

>what program was used to create the files?

Probably a weak offer. What could you do with another TT? I am very happy you didn't get it. The TT stayed in Canada where it belonged and you can stay in Finland.

Now, seriously. Are not TTs easier to find in Europe, then going through the trouble of getting one across the Ocean? Or where you just going to buy it and send it to me for good keeping?

Source record: 66394

On 25 Jan 2000 00:34:16 , Michael and Nicole Freeman wrote:
>Well, I've had no end of trouble with Magic since I've got it.

I'm sorry to hear about your troubles with MagiC. You are using version 6, right? I'm still at version 5.11, and judging from what I've read here over the past few months, version 6 is prone to more problems than 5.

>And CAB shows incorrect colors...

Hmmm. When I first installed MagiC 5, I had a few little problems with CAB, but I figured out that WDIALOG was the problem, and disabled it. However, my problems weren't incorrect colors. Is CAB the only program that exhibits this behavior under MagiC?

>How do you Magic guys do anything with it?!

I guess I've been luckier than you. Occasionally strange things will happen:

A few times I've had a little trouble with MagiC 5 when booting. It would get to the MAGXDESK desktop, then the file selector would come up [in the MagiC START directory] asking for a program to run. It didn't seem to matter which I clicked, or if I just clicked [OK] without selecting any program file -it would continue the boot process and the desktop would appear.

However, when it came time to SHUTDOWN, it wouldn't do it on the first try - regardless of whether I used the MAGXDESK shutdown or the FASTSHUT part of SMU.

Disabling MGNOTICE seemed to solve the problem, but then...

The VAG ROUNDED font (which I use for my Magxdesk window font) wouldn't work. All I got were the folder shapes, and thin horizontal lines in place of the normal characters. Yikes!

So, I recopied all the fonts from a backup, as well as the AUTO programs NVDI.PRG, MAGXBO32.PRG, and maybe one or two more, in addition to recopying the .INF files and ASSIGN.SYS files from a backup. After this, even when re-installing MGNOTICE, everything seemed to be working fine. (?!)

And a couple weeks ago, I was having trouble whenever I tried to boot up in 16 colors under MagiC (I have 16, 256, and TC MAGX.INF files with different screen resolutions that are selected within Xboot depending on my needs for that particular session). Anyway, the 16 color MAGX.INF file must have gotten corrupted or something, because it would bomb out during bootup 8 out of 10 times. A backup did the same thing, so I recreated another one from scratch, which solved the problem.

I wish I could be of more help to you though, sorry.

-Paul

> I have 1040 ST's, STf's and STe's. My hard drives have the ICD clock in them.
>All of the blasted things keep reverting to 1989!

In this case you haven't installed any patches.

> And the FEW remaining Forem/Turbo SysOps have the problem with the BBS
>software as well... it won't take the year 2000.

Correct, from what I have been reading. This requires the Author to fix the program. If the source code is available, then perhaps Forem users can find someone who can write the patch required.

> I have TOS 1.2, 1.4, and I don't know what else... but they ALL have problems.
>I've read "well, if you use patch X you'll also need patch Y, but you can use
>just patch A unless your TOS needs patch B... and on and on and on.

Read the Y2K page and go from there. You are going to have to read and know what you need and install it. Then if the software you run still isn't Y2K friendly, you need to find another program, or a way to upgrade that particular program.

As all my STs still live in time periods between 85 and 89 because I have no clocks in them, I don't have the problem looking at me in the face. So I myself have been lazy to do anything about it. But in Forems Case, I could see this as being a necessity.

> When someone finally gets an answer, please let me know!

The answer is out there.

This is not correct for the external hard drive either. The
jumpers only need to be removed if you are installing the internal SCSI
host adapter to use an internal hard drive. You can use an external drive
(with the appropriate ACSI/SCSI host adapter) with the jumpers installed
or with the internal host adapter installed.

Hello everybody,

like some of you will already have noticed, the Belgian Atari FTP site
is out.
This is due to a hardware update. The old HP Apollo was changed and
replaced by a brand new Linux PC.
The hardware change was quickly done. Now we are busy to set all
software parameters. Of course security has priority.
I hope the access to the FTP site will be available as soon as possible.

Sorry for the inconvenience.

Source record: 66255
Cross-posted to: alt.comp.virus,comp.sys.atari.st,hacktic.virus

The "Ultimate Virus Killer 2000" is the industry standard virus killer for
the Atari ST/TT/Falcon platform. The program has been around for well over a
decade, and with the latest release (8.1) it's turned shareware.
There is now an official "UVK 2000" support site where you can download the
program, find descriptions of all Atari TOS-platform computer viruses (and
their symptoms) and more. It's located at http://uvk.atari.org.
This message is being sent to three newsgroups. If you think this
constitutes spam, or if you think this message does not belong in your
particular newsgroup, please contact me at cronos@atari.org and I will
refrain from posting to the newgroup in the future.
Thanks for your time.

I still have most of the necessary cables, power supplies, etc. in stock, but you'll have to let me know exactly which model 520ST you have. Does your system have an INTERNAL floppy disk drive (look on the right side) or an EXTERNAL disk drive? Let me know and I'll tell you exactly what you need.

Are you a member of the former Atari 'scene'? Did you, perchance, visit the "ST News International Christmas Coding Convention", in Oss, Netherlands, December 1990?

Then you should not wait a second longer and surf over to http://stniccc2000.atari.org to discover that, in fact, a reunion of that very historical event is being organised for December 2000, a 10th anniversary reunion as it were! It is going to be the coolest event of the millenium, I can assure you!
In case you've already surfed over to that site in the past year or so, be advised to check it out again, as it's been overhauled utterly! It looks way cooler now, and contains a lot more information!

Oops: replied by mail, instead of posting. This is the posting.

I have. It is a clock socket, arranged to fit under the power
supply.

Do not know what it does with y2k. It has a battery, which may need
replacement by now. It would work with the generic programs used for
Dallas Semiconductor Smartsocket Clock chips. If you cannot find
those, I should be able to help.

Jim,

So what should be in the empty socket? As soon as I get it all figured out I will let you know if it has a y2k problem. I tried to contact Zubair about the upgrade but, they wouldnt supply me with any information. If you do find the disk with the utilities can you please email the all to me?

Thanks Don

>
>Only problem I had with the 1.2 gig was ICD software wouldn't format /
>partition it. I had to do that with Diamond Edge (? - something from
>Oregon Research anyway).

I did my 6.4 GB IBM IDE with HDDRIVER. But I found I couldn't use
Diamond Edge - it was OK on my 50 MB C:\ which had 1 kB sectors/2 kB
clusters, but the 16 kB sectors/32 kB clusters on the other 930 MB
partitions threw it completely: It showed negative byte totals and then
crashed repeatedly, so I removed it from my drive.

Anyone else had this problem with DE and large partitions/clusters?

Regards, /Peter/

Hello ppl,

The FTP server is running again... i.e. you can download from it again.
However there are some internal limitations about browsing the server,
but this shouldn't have any consequences for you atari-users.
Upload isn't possible yet.

I'll keep you informed about this.

Greetings,

Saka

Pick a question and answer if you like----

So, when was the last effort to get the name of Atari out in public (commercially or otherwise)? Was it with the TT030? My Falcon has no reference to 'Atari' on the casing (C-LAB Falcon MKI)! Was the name 'Atari' burried when Tremiel shut it down? (hence, Falcon, Hades, milan). How many calls to Hasbro would it take to re-start the Atari computer?

Correct. It was known about. But being a known problem or an unknown problem, it is still a bug. And in 10 to 15 years, who would think that people would still be using their STs? But indeed their was plenty of time to fix the problem with regards to more recent software.

However, most people ditched their 10-15 year old PCs. And yet even when they got W95 and W98, they still required Y2K patches.

I'm slowly becoming convinced 5.11 is the better version from a problem aspect. OK, I've only got an STe not a Falcon but so far (tempting providence!) it's been utterly reliable and rock solid both in booting up and running. "If it ain't broke why fix it" might be the best philosophy until the next version comes out.

I have noticed in the past with other programs that you have to skip a version, e.g. Newsie 0.90 was fine, 0.92 I couldn't get to run, 0.94, fine again.

Hi

I had problems when I first ran Ghostlink. I was using a 486 and I
couldn't get a connection at anything else than a 57.6!!

Now using my 233 & 333's, I can't get a connection at all:(((If someone
knows why, I've got several other users with the same problem!

I've been told that Paralink is a lot better and faster using the
parallel port, although haven't got around to trying it out yet!

-- Cheers! For Now

The LINK97 by WB Systemtechnik is a better choice anyway since it
supports initiator identification. This is needed in order to get
certain drives working with the ST. These drives (e. g. some Quantum
Fireball models) won't work with any other adapter.

1690. FTP Site List

Newsgroup: comp.sys.atari.st
Date: 2000-01-31 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <Ovgl4.9$Ze7.168@198.235.216.4>
Source record: 66150

I have decided to post the FTP site list that is found on Halvards
Atari Launchpad. As of right now, it will be in its last update. Then with
input from other users I hope to keep it current.

We will see how it goes. Here is the most recent list that is
available.

Later Brian.

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself.
If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

Email server email address Equivelant to FTP site

--------------------------- End of file ---------------------------------

So thats the list. If you haven't seen it in awhile. Test what you wish.
Let me know and we will adapt and change accordingly.

Finally the UMICH FTP site has not existed as an FTP site in the truest sense of the word. You can't access the site via FTP. However, it is an FTP archive that you can access via http.

And since their are many files there I am adding it to the list with a triple notation.

***http://www.umich.edu/~archive/atari/

If you are interested in seeing this continue, please reply publicly to this post and I will judge accordingly how important this is to Atari Users. At this time it is important to me:-).

Later Brian.

1692. Has anyone used KCS Omega II?

Newsgroup: comp.sys.atari.st
Date: 2000-01-31 00:00:00 UTC
From: Laurence Shields <laurenceshields@mindspring.com>
Message-ID: <3895CC4B.AE827589@mindspring.com>
Source record: 66152

I'm thinking of buying a copy of KCS Omega II but the price is $199.
That seems a little pricey so I though I'd ask everyone, is it worth it?

I've heard so many good things about it and I'd like to have one before
I can't get them anymore (like copies of Logic, which I also use. Try
finding one of those now.).

Thanks,
Laurence

>Keep IDE wire short as posible, falcon IDE -is- the CPU BUS, anytime !
>Signals becomes more bad reflections with long IDE wires.
>Longest i tested well: 20cm

You are right, of course, but I left the cable on the 2.5->3.5" adaptor I got from ASP (made by Mario, I think) the original length, folded it up under the IBM 6.4GB 3.5" drive, wrapped that in thin card to stop any shorts and laid it in the gap between the floppy and power supply of my Falcon, where it /just/ fits (after bending the wires of the power connecting plug out of the way a little).

>Watch your internal psu, +12 can't be charged more as 200mA !!!
>+5 looks OK for most of 3.5" drives, but not the +12 DC.

Mine seems to cope OK so far - at least it has for 3 weeks, even with many hours continuous running. I guess it helps that a previous owner moved the fan so that it is fitted in a hole at the top of the shielding over the power supply.

>Watch the temperatur of your brand new 3.5" IDE device..
>
>Only only one 40x40mm fan can't exhaust PSU, CPU and a hot 3.5" device.

Again - I seem to have no problem so far, even though the drive is wrapped in thin card (actually the 'envelope' from an AOL CD mailing).

Regards, /Peter/

1694. Re: IOMEGA zip drives

I was looking around for a Zip Plus a while back, and couldn't find anyone who carries it (and so have already bought into a standard external SCSI-only Zip). Any recommendations for where to look?

Or has IOmega dropped the Plus? It isn't mentioned on their Web site, either.

1697. Printer driver for HP DJ 710C @ ATARI TT ???

Newsgroup: comp.sys.atari.st
Date: 2000-01-31 00:00:00 UTC
From: Gottfried Barthel <Gottfried.Barthel@uni-konstanz.de>
Message-ID: <3895FD86.F2F@uni-konstanz.de>
Source record: 66157

Hi ATARI faithfuls out there,

sorry if this question has perhaps been posted several times; I did not have the time to check each of 277 messages found by deja.com:

Is there a way to use a HP DeskJet 710C with a TT? It should replace an old DJ 500. The manual of the DJ 710C says something (in German) like "You need MS Win or WinNT for this printer", and all the driver software on the floppies is only for these M$ products.

The main use is printing B&W TeX documents, so colour support is not an important issue.

Unfortunately, the link to "The Deskjet Home Page - Printing support for Atari" (http://www.users.zetnet.co.uk/wyvern/hp/hp_home.html) on #3.4.2 of "The Atari ST Quick FAQ - Version 2.9b - 1999-09-28" is broken.

Thanks in advance for any helpful information.

Gottfried Barthel

Fachbereich Mathematik und Statistik, Universitaet Konstanz
(Deutschland) - Dept. Maths & Stats, Univ. Konstanz (Germany)

PS: Please send any answer also directly to my e-mail address.

(PPS: Message written on a SUN; the TT firmly refused all attempts to connect it to our Ethernet LAN)

hi.
sounds like it is a Windows only printer. :-(
check out the behne bros. web site for the printers NVDI 5 will drive,
maybe 710C will be there!?
I don't have the website off hand but you could search for 'behne',
'NVDI', '2b', or try www.2b.home??

>sounds like it is a Windows only printer. :-(
Doubtful. Most HPs are PCL3 printers. Although a 710C driver
would be the most preferred, other drivers (660C, 600C, 500)
will PROBABLY work to some degree. No guarantees, though my new
610CL is running fairly well (though slowly) with a 660C driver.
If possible, get a printer that claims to be "DOS Compatible".
Such a printer will not be assuming Windows.

: will let you know if it has a y2k problem. I tried to contact Zubair about the
: upgrade but, they wouldnt supply me with any information. If you do find the
: disk with the utilities can you please email the all to me?

If memory serves, nothing. It is the other end of the clock socket, which
plugs into a ROM chip location. The ROM chip should be at the far end
of the L-shape. If not, you are missing a ROM chip, and the machine will
not boot.

Otherwise, check and replace the battery, however that can be done,
and put the case back together.

As to the utilities, I know there is a setter program, and some other
program on some other disk that fetched the time and moved it to the
corner of the screen. I have to go pack for a long trip tomorrow morning,
so remind me in a week or two.

If that is too long, look at the hardware hack web site, probably mentioned
in the Quick FAQ, and see what programs it says to use with a do-it-
yourself version of what Zubair sold. Those should work.

Re-start Atari. There's a serious risk here of starting to sound like
those poor old Amiga die-hards on the Softlogik digest, who perpetually
await someone taking over Amiga and conquoring the computing world by
virtue of the vastly superior technology <grin>. Someone failed to tell
them the world's moved on over the last few eyars.

Seriously, while I believe that restarting an old brand and trying to
catch up with progress is nigh on impossible, I still appreciate my
Mega4STe for what it is and what it can do. Mine still plods away every
working day for five to sicx hours driving a Roland plotter via
Pagestream 2.2b. The day it dies, I'll replace it with a PC / Corel
combo but to be honest it shows no sign of tiring. With Geneva /
Neodesk, the interface is quite modern enough and cosmetically it looks
ok on screen, even though I rarely drive it past 640 x 480 / 256 colours
these days. When we did design work on it with a 17" Mag monitor, I
used to run it at 800 x 600 / around 100Hz - used to be flicker free at
that level.

The Crazey Dots / NVDI ET-4000 combo was the best investment I ever
made (next to my power guillotine late last year - that bet sliced
bread!).

Interlink had to be one of the nicest comms packages I ever used. I
don't know is there was a demo.

Regarding VT100, I would have thought Connect would do the job also, if
it's still around.

> Neodesks league. I want to eliminate all Magxdesk stuff completely.

Last time I did any multitasking of any note under Geneva was a few years ago now. However I remember running pagetsream, 7-Up and Octopus bbs at the same time and as far as I could tell comeone loggin onto Octopus while I was in pagestream didn't appear to create any discernable slowdown. The only experience I've had with Magic / Ease is magicMac on a Mac IIfx and Quadra 950. MagicMac is ok, but I find Ease a bit crass after Neodesk. Better defined, Neodesk's 3D is subtle compared to eases chunky 3D effects - almost overdone. I tried to get Neodesk running unbder magicMac, but never had much joy.

I'm sorry to hear that. I had been thinking about a Link II to try and get a Zip drive going on my MegaSTe. The 100 meg Maxtor goes away to dreamland occasionally and I haven't got a full backup. I've got all the Pagestream files for our Roland plotter backed up on a Mac IIfx / MagicMac setup but if I could back up the drive I'd swap in one of the spare 1 gig scsi drives I've got surplus from drive upgrades on the Mac's.

Guess that's not looking oike an option then.

Hell, I can remember those guys from Sparta, back in the 8-bit days before ICD was formed. What a shame.

No, there's no need to get to such extremes. Just go into a PC shop. The
games have Hasbro Interactive on them, and a little Atari logo. They are all
pretty crappy, and expensive for what they offer (Pong is still pong, even
in 3D and 65K colours).

The last Atari badged product was the Jaguar. The Falcon was sold by Atari,
but later built under licence by C-Lab.

After the Jaguar, Atari basically gave up and merged with doomed JTS for tax
reasons. Neither companies did anything for a few years until Hasbro bought
up the intellectual property of Atari and JTS was dissolved.

Shiuming Lai wrote:

> ..unless it's narrow (2.5" or 3.5" form factor), Ultra,
> Ultra 2 LVD, or Ultra 160...

Ultra-SCSI is no problem, only wide is not a good idea. Note, however,
that with the internal SCSI adapter of the Mega you can't use SCSI
drives > 1 GByte. To be more precise: Sectors beyond the first GByte can
simply not be accessed.

Hi All,
Regarding CAB 2.7, if a text file is loaded which contains a URL address, should that address show as the color selected and clickable? It shows that way in Newsie (.94) downloads but not in CAB!

NEWSie parses the original text for anything that looks like a
URL, while CAB is a simply an HTML parser; if there is no HTML
anchor, there won't be any link.

Coming in late in this thread, but I'm pretty sure that you can append text to the clipboard by using the [Shift] key during part of the copy process - either during text block marking or in conjunction with [Ctrl]C.

I love KCS Omega. It's probably the most flexible and powerful
sequencer ever made.

The price seems high. I think that was the original retail price. Just
make sure you get ALL the manuals...the program is pretty cryptic
without them. At that price I'd expect all the modules as well.

This is a great program for experimental music. If you're doing pop
music you'd be better off with something else.

Well, dear sir, it is something that though I have done a *lot* of, I have
to confess
that I have never had the problems that you are expressing concern over. In
fact,
I have copied almost all of my software (i might have copied all of it - I
mean, hey,
Atari software is most definitely not bloatware) to CD including making a
font CD for
my DA's Layout (I don't want to dedicate 640 megs to fonts, ya know?) as
well as
backing up all of my software to (example:) P:\PROGRAMM.ING\ etc. with no
problem at all using ISO-9660. The thing is though, I did it with Easy CD
Creator

on a PC as well as using Linux's software for CD creation. I've never done it with
a Mac, so I cannot hazard a guess. The CDs have been used on an STf, an STe,
a MegaST, a MegaSTe, a Falcon, a TT, MagiC, MiNT, TOS, and MagiCPC with
no problems at all. As for hyphens, I just replaced them with underscores, which
worked really well for me. The only thing I was unable to perform was long filenames
for obvious reasons, of course. That'll wait until I get ExtenDOS Gold for my Falcon
and MagiC 6.

Sorry, I'm no help, but I just wanted you to know that you're not being ignored.

From: Leslie Hartmier <leslieh@v-wave.com>
Message-ID: <876eb5$1v2$1@burn.ab.videon.ca>
Source record: 66178

Hey, I was wondering if anyone could help me solve the problem of
having the printer types in NVDI 5.0x being completely invisible and not
selectable in Atari Works (or any GDOS using software) under any
Atari using platform (TOS, MagiC and MagiCPC). Many thanks.
I've already emailed one of the Behne brothers, but have not (yet)
gotten any email back, and it makes using NVDI 5 almost useless for
printing or sending to STraight Fax, as I cannot select more than one
printer.

92 had nothing to do with Magic. I am surprised anyone got it to work. It wasn't out very long before John got .94 out there to fix all the problems of .92. However, I believe someone still posting here is using .92. He must be the only one to get it to work:-).

So don't blame Magic for this. Magic just seems to be something that works on some Falcons and is quirky on others.

Later Brian.

The best way to handle URLs in text files is to install StringServer and
TextView. The other alternative is to install XURL, which will convert
text-based URLs into HTML. Whatever the choice, both require a desktop
that supports the AV_PROTOCOL.

StringServer/TextView:

http://bengy.atari-computer.com/downloadbay/public_html/extensions/sspb3110.lzh

XURL:

First: the *card* is very userfriendly: it comes mounted in a 5.25" drive
bay, so you have all connectors reachable at the front of the machine.

The installation is nothing special: plug the PCI-to-VME-adapter into an
empty PCI slot, then connect the flat cable from that card to the StarTrack
which sits in the drive bay - done.

It does come with its own software (which may require getting used to), but
a good part of falcon audio software works, too - ask Stephan Wilhelm for a
detailed list of tested software.

>As far as I know Woller is working on another DSP card , the so called Falcon
>Kompatibilitaetskarte which will be much cheaper and will allow other Falcon

1738. CAB.OVL update and Boinkout2 update

Newsgroup: comp.sys.atari.st
Date: 2000-02-01 00:00:00 UTC
From: baldrick@dilbert.netset.com
Message-ID: <8770br$j0q$1@athena.netset.com>
Source record: 66184

Well I've been busy lately ;)

2 new things available from my web site.
http://www.netset.com/~baldrick/

1. BoinkOut2 update. Thomas Huth ported Boinkout2 to PC-GEM in
the process we've been working on getting rid of some problems with the
code. My atari version is now available on my site. Mostly bug fixes,
but did add support for the AP_TERM command.

2. CAB.OVl 1.3105 beta available.

I've been working on some major update to my CAB.OVL. Not all of
this is ready for use yet. However in the process I found several small
bugs that have probably been causing some of the problems. I've backed
off some of my changes to make this version available. Should be a bit
more stable, and maybe a bit more speed. Some problem sites should now
also work.

Thanks and spread the word, I'm mainly an english only speaker
anymore,

Dan Ackerman
aka baldrick@netset.com
http://www.netset.com/~baldrick/

Source record: 66189

Hi Leslie. You can change the printer used with the printer CPX. Sadly, this CPX is automatically deleted during installation of NVDI 5, but if you still have it from version 4, try to copy it manually to your CPXs folder. This worked well in a Mega ST, but on my falcon it makes the whole Xcontrol to unload (under MagiC). I haven't try reinstalling it, but in the mean time, I just start the Fontname application (or any app that uses the extended printer dialog, like Qed) from which is possible to change the default printer.

All the best!

Daniel

Neil,
I take it you're saying that in CAB 2.7 you can't get a clickable URL
in a text file that shows in a different text color as in Newsie!

HI Folks...

Can anyone tell me if I'm going mad?,....I could have sworn that somewhere I had seen a MIDI file player for the STe that played back using the onboard sound hardware.....A bit like the Falcon one from Softjee.....Can anyone else remember seeing it, and if so a URL would be appreciated..

You are probably thinking of EPSS by Copson (Zero-X fame).
There is a demo on some FTP sites, but it's no longer a
supported product. It was originally made to replay the
music of Unit 17's (demo crew) musician, who could only
work with MIDI, and not trackers. The EPSS system was
used in a few demos like Dynamite and Jam House, and
evolved into a fully commercial product.

To achieve MIDI playing with internal synthesis required
a few compromises, such as limited MIDI command support,
and boosting the bass and treble to maximum in order to
compensate the loss of dynamic range from mixing so many
voices into those two 8-bit D/A channels. However, it
did work well within its limits, from what I saw.

One thing that happened here. When updating from 5.01 to 5.03 the
setup made me re-select the printers again. I thought ok whatever.
However apon the next time I tried to print not one GDOS program
would print at all, got errors about missing drivers and such.
After much frustration messing with the CPX which would not let me
pick a printer, I discovered one of the files in the tool folder
called I think INSTPRNT and ran it, again selecting the same
darn printer drivers. I do not know what this program did
differently than the updater, but it fixed the problem.
When I went back to the NVDI CPX printer setup, my missing
drivers where back and my apps print now.
Hope this helps...

I assume that you've run the "Install printer" utility included in the NVDI
Tools folder? That lists all the printers that NVDI understands, with a
symbol that resembles a jigsaw piece against the devices that are already
installed?

Otherwise I'd be looking for things like misplaced assign.sys or possibly
nvdi.sys files?

Source record: 66198
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings,

Can anyone help me with the installation of a JRI Genlock in a
Mega ST? I gather that I need to pull the video shifter ship, and seat it
in the underside of the Genlock board, then fit the Genlock in the Mega
video shifter socket. Then there is a black wire that is loose from the
Genlock and I'm not sure where it should go. I tried running it to
ground, but nothing happens.

Your assistance would be greatly appreciated.

Aloha,
John Perez - jperez@hawaii.edu

> >After the Jaguar, Atari basically gave up and merged with doomed JTS for
tax
> >reasons. Neither companies did anything for a few years

Actually their plan was to enter the highly lucrative laptop disk drive
market. Their first year as a combined company, sales grew from $10 million
to over $120 million.

The JTS plan wqas to build a thinner 3 inch laptop drive using cheap 3.5 in
drive components. Sales of standard 3.5 drives were to support the company
until the 3.0 market kicked in. Tom Mitchell (the pres of JTS) used this
same strategy with 2.5 in drives to turn Conner Peripherals around.

1 1/2 years after the merger, the bottom fell out of the hard disk drive
market nearly destroying seagate, western digital and maxtor as well as
destroying JTS.

The most interesting part of the story is that Jeffries and Co an investment
banking firm was supposed to raise $100 million to kickstart JTS. Jeffries
couldn't raise the money, and JTS had to go through a hedge fund to get the
money. The hedge funds locked in an arbitraje on JTS's stock, shorted the
stock to nearly nothing and destroyed the stock. JTS's stock was diluted
past authorized shares. JTS had to increased authorized shares outstanding
and in the process scared off all of wall street. With no support for their
stock (and the company), JTS had no way to raise more money. They tried
selling off assets to keep the company afloat, but the disk drive oversupply
lasted too long.

Anyway, their plan was pretty solid. As far as I know, the rights to all
the hardware is still owned by JTS. The sale of the software rights to
Hasbro occurred right before the major portion of their patents were due to
expire which would have made those assets worthless without a substaintial
amount of cash invested

This is about as much of a long shot as I can think of...

Several years ago I left the Atari World, when I sold my
TT to a person in Canada. I recently have found a need
for the source for the CD-Rom driver I wrote for it. I have
the Mint executable, but I want to get a hold of the actual
source, which was on the hard drive.

Since I no longer have the name of the person I sold the
system to I am posting this in the faint hope that that
person still has the computer, and more importantly still
has the source code.

I had also shared the source with a person in Europe, but
I do not have that name either.

So if anyone in Canada bought a TT from a person in Raleigh
NC could you help me out?

CAB requires the URL be encased in HTML markup to make it clickable.
XURL will automate this process through drag-and-drop (from text to
HTML, and then the automatic launch of CAB in one fell swoop).

StringServer/Textview is your best choice for managing URLs, because it
just passes the URL directly over to CAB through the AV_PROTOCOL. Plus
you can click on URLs in a text file and have them automatically
appended to another text file, where the sites can be visited later.
It's essentially a launcher that passes parameters -- a web page, an
e-mail address, an FTP site, a command line, whatever -- to the programs
of your choice; like a razzle-dazzle 'Install Application'.

Hmm...the problem I've been having is not that I cannot print exactly.
I
can print, I just can't see any printers in the Print Setup in Atari Works,
or
any GDOS supporting programs for that matter. In other words, I cannot use
the STraight Fax driver, or any of the other printers I generally select,
unless
they're the default driver. Any ideas?

Oh, actually, it does appear that I can use them, but for example, in Print
Setup
in Atari Works, all that comes up is 21
22
23 (greyed out)
(nothing in this slot)
24 (greyed out) (same
as above)
25
etc.

In other words, I may be able to use them, but I can't tell which one is
which unless
I have a list of the drivers and what slot they're in. Anyone come across
this?

Hello,

Here is a new Quake version for Atari, which should work on clones,
using the VDI. I consider it unstable, because many things were not
tested. Note: it needs a 030 or more, 8Mb Ram, MiNT.

If someone wants to recompile it for better versions
(030+FPU,040,060), it will be nice. There are lots of bugs that are
still here, so any help will be appreciated.

What I don't like is very stupid error in TOS 2.06, what don't allow to
enter any year above (19)99. And it's made in 1991.
I have some 286 motherboards with BIOS from 1987-8, and they are at least
partially Y2K compatible.
Only problem is that they can't automatically switch to 2000, but to 1980.
When you enter Y2000 manually, then it is OK. Problem is of course by
hardware clock with only two digits.

I'm sure you get several of these postings here, but please forgive one more.
I am in the midst of serious house-cleaning and recently stumbled onto the following equipment in the back of my closet:
520 ST (the original ST w/1 meg upgrade)
SM124 Monitor (monochrome)
SC1224 Monitor (color)
SF314 Disk drive
includes all power supplys, cables etc and it works fine. I stashed it 10 years ago when the hard drive died.
Is there any market for any of this stuff or is it trash.
Thanks...

I've downloaded Sector One's FalcAMP, but how do I get an MP3 file to try it on. All the MP3 sites I've tried with my office PC/Netscape assume or require you have special software/plugin. This I have not got and am not allowed to obtain. Trying to get one on my Falcon or my Milan is even more impossible, I just get rude messages to the effect that 'we see you haven't got a PC or Mac. so bugger off'. Any help please.

For those who remember my difficulty with surfing with my new 56K modem and Milan, all is now OK and I'm managing 7000 to 8000 b/s on a good connection and 4000 to 5000 on a standard at 115,000. Zetnet's 56K line is still not so easy to pick up as their standard one, usually taking 3 to 4 'BUSY'/re-dial sequences before connection. Thanks for those who helped.

Bob King.

have you tried www.mp3.com? When I tested FalcAmp for a review in our
club newsletter, I went to grab an MP3 from there using CAB 2.7 .
There's an option on each of their MP3s to do a direct download rather
than streaming. All you have to do before the download proceeds is to
give your name and e-mail address (which will be saved in your cookies
file so that you won't have to go through that again). Had no problems
downloading a 5meg .MP3.

FalcAmp works great, BTW. Now if only someone can design an
interface/jukebox front end for it :)

Not true, at least not in TOS 3.01. With the standard XControl v 1.31
you can set dates from 1980 to 2079 simply by entering the two digits.
Surprisingly TOS also knows that 2100 is _not_ a leap year!

The keybord processor is a different story...

>I have some 286 motherboards with BIOS from 1987-8, and they are at
least
>partially Y2K compatible.

My pc with Award bios is OK but some versions from -96 are not. And the
were written only 4 years before the roll-over.

Hi Daniel,

Yes I did just that last night. I don't like enabling cookies on CAB, so temporarily enabled reception. After I had sent them my e-mail add. (my zetnet one - they are not having my office one!!!!), the page froze. I will try again tonight, reenabling cookies just for then. If I can't do it on my Milan, I will try it on the Falcon.
I will keep you informed. What we really need is an MP3 player as a CAB module.

On another point, I have down loaded a javascript (*.js) reader/decoder . Do you know anything about this - can this be used as a CAB module. I have placed it in the module folder and made it the application for *.js files, but have not noticed any difference.

why would you need a software plugin to download an MP3 file?
I just hold down the right mouse button over the MP3 file until
'Download'shows up in CABs popup menu, and download it!
Are you trying to play the MP3 file online? from within CAB?
might be a bit difficult, maybe the Milan is OK there though.
Would you leave the URLs you're having trouble with? I'd like to try
them.

Hi Ken,

this is very odd!!

I've tried the normal download method from www.mp3.com, but on looking
at the downloaded supposed mp3 file see that it's a brief three line
HTML message, certainly not the full megabyte mp3 file. As I've said in
reply to Daniel, I've been there, given them my e-mail address, but not
got the T-shirt!!!
I'll try again with both the Falcon and the Milan.

Thanks for your interest.

Now to waffle!! With all these dedicated genius's of programers
beavering away, perhaps we atarians can at last 'come out'.

If everything goes OK with the Milan II, it will be the software
holding us back. I've been looking at the totally compatible CorelDRAW 6
Suite, ie CorelDRAW CorelDREAM 3D, Corel ARTISAN and Corel TEXTURE. For
the atarians, we have DA's Vector Pro, no real equiv. of CorelDREAM 3D,
PhotLine or DA's Picture and no real equiv. of Corel TEXTURE.
Why DA got so hung up on TIF, TIC, TIH and TIP I'll never understand.

Bye

Bob King

PHPlayer (from William Wong) does exactly what you describe. As an STe
is not exactly the ultimate in raw power, some MIDI files will play better
than others, but for some, it works.

http://www.geocities.com/SiliconValley/6880/phsw.html

Following this link, you will need to download also additional Samples
(it's explained in the documentation) if you want more than a piano sound.
If you want to use additional sounds, a hard drive is recommanded.

Hope this helps,

I have a limited amount of brand new Atari Jaguar items for sale or trade. These packages are ideal for new collector's or somebody wanting to start or add to their Atari collection. If you have any questions, please feel free to ask. I am also willing to trade for certain items, please see my list at the end of this post. All prices quoted are in U.S. funds with the buyer paying shipping.

If you are interested in any of these items, please respond to Jim at jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.Jaguar (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

** Atari Jaguar Packages - Brand New (all contain one controller, RF Box and AC adapter)**
==========
Box conditions vary, best condition boxes will be sold first.
-.Atari Jaguar with CyberMorph cartridge and Composite Video Cable $50
- Atari Jaguar with CyberMorph cartridge $40
- Atari Jaguar (No Cart) $30

** Atari Jaguar Games And Accessories - New/Shrink-wrapped**
==========
- Checkered Flag $10
- Composite Video Cable $15

Atari Jaguar Games - Complete but Opened Please make an offer
==========
- Doom

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision

- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games
- A working Vectrex controller
- A working DSS Satellite Receiver with H Card
- Working DSS HU / P3 Cards
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

FalcAMP is for Falcon only (hence the name) due to its
requirement of a DSP. For Falcon owners, I recommend
Aniplayer 2.08, very well designed and plays MPEG
layers 1, 2 and 3 for audio.

Computer Shopper magazine has provided MP3 music on its
cover CD, including the current, March 2000 issue.

>ten 960 Mbyte partitions, no problems at all.

Hi Shiuming!

You're lucky - mine is V2.01 and while it works on C:\, as I said, on D: (which Thing reports as having 929,628,160 bytes total, 50,462,780 used and 879,165,440 free) Diamond Edge reports -929,562,624 total, with -1,808,662,528 used and 879,099,904 free (I have added the commas for clarity).

If I try to 'Test disk' on D:, DE crashes and MagiC reports 'Memory block destroyed by user, Address of MCB $004EC10, Data of MCB $00000000 (repeated 4 times)'.'. After a reboot, trying to bring up the fragmentation map works fine again on C:, but on D: nothing happens for a few seconds and then the system crashes again, this time with 'Address of MCB $0044E878 or sometimes $044F874' and again 4 sets of zeros.

So either my 2.01 is faulty, or they fixed it in your later version. I shall have to somehow get hold of your later version and try it...

Regards, /Peter/

1787. SPX files

Newsgroup: comp.sys.atari.st
Date: 2000-02-02 00:00:00 UTC
From: xlator@cix.compulink.co.uk
Message-ID: <87actcasu1@plutonium.compulink.co.uk>
Source record: 66233

Can anyone tell me of a program that will show an *.SPX image on a Falcon with'without MagiC and'or NVDI? I believe this is some sort of compressed image created originally in Spectrum 512 (which doesn't work on a Falcon). I have files that display normal *.SPC files, but not the *.SPX.

If the_phantom is reading this - are you the same guy using that name who produced spxcrt14.prg, which may have been used for creating SPXs?

Unfortunately, though I have the program (in a spx_spxc.r14 folder with other conversion? utilities) I have no docs for it. Can't recall where I got it, but it is not on my Spectrum 512 release disk. Or does anyone else know about this program, or if/how Spectrum 512 can be made to run on a Falcon? It almost loads in ST Low resolution, but then sticks with part of the menu murkily visible on an otherwise all-black screen. One has to reboot to get out of it as the mouse won't work.

Any help much appreciated. I haven't tried Backward - where does one get this from?

Regards, /Peter/

This was said in the context of the internal drive being present since
in the US I have never seen a Mega STE without the internal drive.

I saw this box at Wal-mart. It had the Atari logo big as can be on the
cover, but I didn't look at the fine print. I'm sure it would say Hasbro
on it somewhere.

Source record: 66238

I am having the same trouble. I "Beamed Up" my Cure CD to MP3.COM with the PC, and wanted to download it to the Atari, but while CAB will display the www.MP3.com page, it crashes when I try to access the my.mp3.com page to get my beamed music. However, there are several songs at www.mp3.com to download, and I successfully downloaded a 5MB song the other day. I'm using a 56K modem, but the net conditions only gave me about 2300 download rate, but the whole song came in fairly quickly.

Doesn't seem very likely since Spectrum 512 had to play all kinds of
tricks with the ST shifter chip and timing to get the ST to display 512
colors, something like 4 pallete shifts per scan line if I recall
correctly.
>
> Any help much appreciated. I haven't tried Backward - where does one

To browse with a 1040, you will need CAB 1.5, STing (both
available on the net) and an external modem (NOT a WINmodem).
Since an unmodified 1040 can only tolerate 19,200 baud, look for
used 28.8 or 14.4 modems. USR made a 28.8 "MACinFAX" that runs
quite nicely on my Falcon. As for setup details, it is a lot
easier to connect an ST to the net if you have a hard drive. If
not, post your request to "Tony C." at ATARI@CHEBUCTO.NS.CA.
Tony has figured out a floppy only way to run CAB.

I have never encountered a SPX extender so cannot help here. I
do know, however, that Spectrum 512 is highly dependent on
system timing. You have little to no chance of modifying the
hardware of your Falcon enough to let it run.

Regarding "cheap", you'll have trouble beating E-Bay. However,
I'd recommend you contact Alex Yu at ATY Computers in Oakland or
www.myatari.com (B&C Compuvisions) in Sacramento as they seem to
have the largest inventories of used equipment. They are more
expensive, however.

No. TTP stands for TOS Takes Parameters. When you run a .ttp
program, the program pauses and asks for data. This is a way
for STs to use the power of the command line, and the entered
data can be anything from a file's location
(C:\PICTURES\THISONE.JPG) to commands (COPY D: C: a'). What
program in particular are you trying to run?

Source record: 66111

Thanks to all who helped me earlier with my last post. I've got most my problems worked out.
I just picked up an AtarI Supra 30MB HD that I'm trying to use with my 1040 STf. It was with a box of disk drives and a 520st, I grabbed 3 drives with all cables, a drive master, and the supra all for $6 :)
Well, thats enough of a brag.
When I turn my St on with the Supra disk drive powered up, the ST boots normal, there is the A and B floppy disk icons, nothing else. Is there anywhere where I can find a program to boot this thing into my 1040?
BTW, I'm picking up 2 more disk drives and maybe more which will be for trade. I'm only keeping what I need, I have a couple 314's and one 354, also I have a 5 1/4 made by L.B. for the ST compters. The drive master is also for trade. I'm looking for original MIDI/music software in return. If anyone has a copy (original) of Cubase or Sweet Sixteen I have cash also. Thanks

Are you using MagiC 6 by any chance? If not, then you might need to run
Wdialog (it's part of the NVDI installation). That contains the code for an
extension to the system which allows stuff like the printer selection dialog
to function, as well as some of NVDI's tools such as Fontname. MagiC 6 has
Wdialog's functions built in.

Otherwise I'm stuck...

Possibly, but do you want to stay online for that amount of time?

>
>On another point, I have down loaded a javascript (*.js) reader/decoder
>. Do you know anything about this - can this be used as a CAB module.

The answer is no, as CAB can't handle javascript - a major failing.

Draconis is the only web browser for the Atari that can handle javascript
AIUI.

These aren't LFN enabled partitions are they? Diamond Edge shouldn't be used
on such - instead use the HPOptimizer, downloadable from my web page or from
the latest files topic on CiX...

For sale, UK MEGA ST :

After many years of use, I no longer have any use for my Atari.
Offered as whole system - to budding Atarian who can make use of :

MEGA ST 4, keyboard, mouse with 1.44MB floppy (ELCO upgrade) and
internal ATSpeed C16, v3.5
SM144 mono monitor
Supra 65 MB hardrive
Mag!X 2.0, NVDI 2.5
Lots of software from many years of use including
Calligrapher Gold (with manuals),
Lattice C (with manuals), various programming manuals,

This is located near Watford, M25. More info, offers ?
Please email me.

Paul.

It's "San Francisco Rush 2049" - the last arcade machine released under
the "Atari Games" trademark. Atari Games is one of the best arcade
machine producers ever and belong to Midway.

Greetings,
Matt.

That wasn't the question - it was how to view such a
file on a Falcon, which is certainly no problem as
far as graphics ability is concerned. The ST needs
some software trickery to display that kind of mode,
not necessary on the Falcon. Just need a viewer that
can interpret the file format.

>one...
>*(way too much for just a case)*

? That's a very reasonable price for a case, especially
if it has a good quality, stable power supply. You can
pay twice that money for a really good case, which is
very rugged, has a big fan, filtered mains input...
If you're unaware of these technical issues, it's very
easy to make a false economy which you'll regret.

>Hi All,
>Looking for a program to design web sites on a Falcon. I thought I had
>something on it but it looks like it got burried in my hard drive
>(somewhere!) if I have it at all!!!
>John G.

There are several possibilities.

1) Qed + olga
~~~~~~~~~~~~~

That's my favourite. With this combo you'll have to type in all the tags yourself but with the help of some kind of shotcuts (html3_uc.krz) this is rather easy. Whenever you save your work in Qed, Cab will reload that particular page. This way you've an almost real time HTML-editor
AFAIK, this needs a multitasking OS

ftp://chapelie.rma.ac.be/atari/editors/qed-453.lzh This is the German release. The English docs and rsc are in qed-453en.lzh

ftp://chapelie.rma.ac.be/atari/utilities/olga151.zip

2) Joe
~~~~~~~

A nice HTML-editor which works almost like Qed but offers more possibilities. I do use it a lot but on my system it reacts sometimes strange. The main disavantage is that one can't scroll horizontally. If one design a new page that's not a problem but it can be a problem when one edit an existing page.
You need olga and a multitasking OS to get the most out of it.

ftp://chapelie.rma.ac.be/atari/html-edit/joe/joe146uk.zip
I believe jgt_r1e.zip holds some modules to use within Joe

3) Webwizard
~~~~~~~~~~~~

That's what the docs says about Webwizard

WebPage.Wizard uses a wizard approach (popular on PC and Apple platforms) to allow users with little or no HTML knowledge and/or experience the opportunity to create their own Web pages (or even an entire Web site).

http://cadenza.atari.org/
~~~~~~~~~~~~

4) HomePage-Penguin
~~~~~~~~~~~~~~~~~~~

Also a wizard.
http://www.atari-computer.de/mjaap/prg/

The latest demo can be found on following ftp-server
ftp://chapelie.rma.ac.be/atari/html-edit/hppeng2d.zip

5) Expresso
~~~~~~~~~~~~~~
French WYSIWYG HTML-editor. It's AFAIK only available in French.
http://oxo.systems.online.fr

Demo: ftp://chapelie.rma.ac.be/atari/html-edit/ex100b.lzh

Yes, I like to that too myself. Being one with the machine and all that ;-)

Seriously there are several internal IDE controller boards available. The
topic is detailed in the QuicK FAQ.

>.

If you accelerate the FPU with it's own clock, you would probably want at least a 33Mhz. The 40Mhz are a bit more expensive. You could run the 33Mhz FPU at 50Mhz no problem. Unless you purchase a PGA to PLCC adapter (expensive) you'll need to purchase a PLCC.

1840. Newbie Q- Running .ttp file on 1040st

Newsgroup: comp.sys.atari.st
Date: 2000-02-04 00:00:00 UTC
From: audiophilia@yahoo.com
Message-ID: <87d5sa$5bn$1@nnrp1.deja.com>
Source record: 66118

Hello,
This is probably going to sound like a stupid question, but I am perplexed so I have to ask it anyways. I am an avid user of the Atari 8-bit line, and I decided to expand my horizons by buying a 1040st. It's a cool little machine. Here's the thing. I've been getting programs off of the umich archive, among other places, and some of the files end with the .ttp extention. From what I understand, these are supposed to be executables that are run from a shell. Maybe? Well, I have no shell and haven't been able to find one. A few of the programs that I'm trying to get working are a LHA compressor and Sokobon C. I'm afraid that these files might be for a 030 machine or something, but I'm hoping that I'm wrong and I can make them work on my system. Please help. Thanks.

1841. Re: Newbie Q- Running .ttp file on 1040st

Newsgroup: comp.sys.atari.st
Date: 2000-02-04 00:00:00 UTC
From: audiophilia@my-deja.com
Message-ID: <87dt6hkpf1@nnrp1.deja.com>
Source record: 66119

p.s. -
I guess I'm just supposed to double click on the .TTP, it brings up a window asking for command line arguements, etc. Here's the thing. I'm running it on PacifiST before I copy it over to my 1040st with makedisk. I'm putting the lha.ttp file in the stfiles folder, which acts like the c: harddisk in the emulator. lha.ttp looks like a document, with the page icon, rather than an executable with the window icon or whatever this command line icon looks like. So, now I'm wondering if it needs some kind of executable attribute. When I double click on it, it just brings up that "Can't execute, blah blah blah, show, print, or cancel." Any clues? Is there a utility somewhere that I can change file attributes with? I'm at work now, but when I get home I'm going to try a bunch of stuff. But, any input on this issue would be appreciated. This thing is so cool! Keep vintage computing alive.

Source record: 66121

Hi Tom

Welcome to the ST world

Yes, ttp program are best run from a commandline shell.
But then you must still know what to type.

If you start a ttp program from the desktop it comes up with a nice
alert box in which you have to type parameters. These parameters are mostly
unix style.

Almost all ttp programs display their options when you type nothing and just
press <enter>

Look in the Belgian FTP site for all kind of programs, including
shells.

Try doing an FTP search, and then d-load via ftp, most web based mp3 is
streamed through a Real audio key which then looks for the ra player

atarigalen wrote:
> What is the difference between CD Recorder Pro and CD Recorder
> Audio?

As the name says ;-) Audio is only for burning Audio CDs. BTW I'm very satisfied with it (very intuitive and never had any problems).
Pro is for all kinds of CDs, e.g. I use it for HD backups. Sometimes it's behaviour is a bit irritating, e.g when I say it should not care for file naming conventions and it nevertheless rejects filenames that TOS accepts, but most of the time it works quite okay.
BTW, when you buy the Pro package you get Audio too, so you can choose the one that's better suited for the task you want to be done.

You are right Derryck. I was confused and is the 5.03 freshup the one
that wipes the CPXs. The NVDI 5.01 installer copies the CPXs in
place, so this is a good option to change the default printer.

Yes, there are people who desire to have and use this stuff. No, there is
not a lot of money to be had. I notice you did *not* list your hard drive.
Even if the hard drive mechanism is crashed, the electronics are probably alright.
You should list the hard drive and its condition too.

I am not using MagiC 6 yet, and yes, I am indeed using WDialog. :) This
is
certainly confounding me, as it makes no sense (to me, anyway) that 2B or
ASH
would release this version of NVDI with no ability to check the various
printers
set up.

By the way, does the TeleOffice Fax driver work for STraight Fax?

It is possible that a file has the extension .TTP but in fact is not a
executable at all. I also suppose that these original TOS's ar case sensitive
in the filenake's. Are you sure that the filename is in upper case?

> So, now I'm wondering if it needs
> some kind of executable attribute.

At least the first 2 bytes must contain $601A.

> When I double click on it, it just
> brings up that "Can't execute, blah blah blah, show, print, or cancel."
> Any clues? Is there a utility somewhere that I can change file
> attributes with?

Not needed, it is probably no or a corrupted executable.

But oho! I remember I had similar problems some time ago.
A file was supposed to be a selfextracting archive that didnt selfextract
because the format was corrupted or just not good.

Hi Matt,
So how long ago did that last game come out? This tech guy seems to feel
it's new! And is Hasbro related to Midway?

Short of Spectrums Anti Aliasing, I don't know why you would use Spectrum
512, although I like it:-).

I would be surprised if you were to get Spectrum to work on a Falcon or TT.

The Sync Program doesn't do anything other than check if your ST is in sync
or not in which case you reboot. I believe their is a real program that
actually puts your ST in the proper sync.

>Any help much appreciated. I haven't tried Backward - where does one
>get this from?

http://www.umich.edu/~archive/atari
I am not certain if it is the absolute last release or not. But Version
3.11 is there. Along with Extended Spectrum Pictures, and spectrum
utilities and pictures and spectrum animations. Finally, Unispec gives
Spectrum more power. Commercial package, difficult to find.

Hope this is a start.

Oh yes and Gemview can load Spectrum 512 Pictures.

PhotoChrome (which doesn't work on a Falcon) gets similar results to
Spectrum SPC and SPX on an ST but WOW on an STe.

Actually you can render on the Falcon and view on the STe to be accurate.

Later Brian.

I ran Cab from a floppy. You run STing, exit, remove the STing disk, then load Cab. Its downloading that can be time consuming, and lets just say with a floppy you needn't have graphics on:-).

Erm... Makedisk is for making disks from .ST or .MSA disk image files. It won't help you for file transfer. What you need is to copy files over with standard 720K DOS formatted floppies.

> I'm putting the lha.ttp file in the stfiles folder, which acts like the

> brings up that "Can't execute, blah blah blah, show, print, or cancel."

That's a bug in some TOS versions. To get around this, you have to edit the desktop.inf file by hand, which is a bit of a hassle. Try another TOS version. 2.06 shouldn't have this bug.

Once this is done, the TTP program should appear as an executable with the correct icon. Double click on it and you get a parameter window where you should enter the correct command line parameters and filename of the archive.

Since you are doing all this on a PC, why not just use WinZip ? WinZip handles .ZIP archives, but can also handle .LZH, .ARC and .ARJ if you give it the correct helper apps (as described in the docs). This is a lot easier that launching pacifist.

>printing or sending to STraight Fax, as I cannot select more than one
>printer.

Hi Leslie!

I run NVDI 5 and MagiC 6 on a Falcon, and I can select printers on that in Atari Works, as long as I know what device number they have - in my case 21 for Laser/DeskJet and 25 for my NEC 2200 pin-printer (look in the assign.sys file you use). But I agree, the name part of the field remains blank, and the NVDI printing dialog does not come up as it does with some other programs.

The nprnconf.cpx that comes with NVDI is supposed to be able to change the default printer driver, but this does not seem to work in AW. If the wrong printer number is selected in the latter, the program won't print at all, but if it's correct in AW then it doesn't matter what setting you choose in the cpx, even after reloading AW.

Let's know what reply you get from B&B.

Regards, /Peter/

Cool. I got it all working last night, so VICTORY!!! I just can't get it to work in Pacifist. Thanks to all who read this thread and sent me replys, though.
I'm using TOS 2.06 in Pacifist, still with the same problem. The .ttp's came out of a self-extract for LHA that I got off of UMICH, I think. My idea is that my FAT32 formatted is somehow preventing these files to be executable. When I copy the LHA self extractor to a disk and extract it on my ST, everything works beautifully. But, in Pacifist, the .ttp's show up as regular document icons. So, I don't know. It works on the system that counts, so I'm happy.
My big peave is that I only have 1 DD drive and I keep having to swap disks. But, that can't be helped. I'm thinking of finding a hard drive, though. I know ebay always has lots of good Atari items. Anyone know of any other online auction houses that commonly offer Atari items?

Well, at this point I am probably more familiar with Notator SL.

I inputted a composition of mine on Notator. Then I edited the tracks
so it looks like my manuscript.

Next, I attempted to import the Notator file into Logic.
It imported just fine, except it took my ten or so tracks and created
4 folders.
I am ok with that. But when I went to edit the tracks,
my original edits from Notator were no longer there!
It seemed to just understand the raw midi data.
I think I had to requantize also.

My idea was to input in Notator and edit in Logic because Logic
has more editing features, symbols, etc.

That is all I have noticed so far. But I have not gotten to far
into the program yet.

I don't think they did. The only CD-Rom from Atari was the infamous CDAR drive, which was an ACSI/DMA device, therefore not usable on a Falcon.

Try another shop. You can get them from many places. Why not just get a PC tower for USD40?

Nope, the problem is with the desktop. The desktops recognizes file types
from their extension.

68882-33 (or what ever..) PLCC
FPU Socket below internal PSU

Do not use screw drives to remove FPU!!
Sockets are a kind of cheap plastic!

Itï¿½s senseless to replace the original FPU if that Falcon doasnï¿½t have
any accelerator board that realy need another (high clocked) FPU.
Save your money.

Atari was split into Atari Games (the arcade machine division) and Atari
Corp (computers and home entertainment) during the Time-Warner era. Atari
Games was then bought up by Bally-Midway and is still a very successful
company nowadays. Atari Corp had the fate that has already been described.

The 2 companies are totally unrelated. BTW Hasbro's Atari is no longer a
company per se, just a brand.

It seems I am still out from nodelist, Peter can you check my connected areas ?

BTW the question is this: Applylst does not work as it seems to be affected by the y2k bug, so it deletes my nodediffs as it recognizes them as "obsolete difference file".

It it possible to get the Applylst sources or is there another software that can do this ? Breakneck ?

Hi Daniel,

NVDI 5 doesn't delete/uninstall the printer cpx - at least not on my
master disks.
However, I had the same problem of NVDI 5.03 german freshup deleting the
printer cpx, but on talking to a few people I realised this was an
error so re-installed NVDI 5.02 (after deleting everything and
disabling any other acc, start prg's etc) then downloaded the english
version 5.03 from the B&B website and everything was ok - printer cpx
now available etc. It has run fine ever since.

Hi Michael!

Just a thought, is there any sticky labels underneath. If it's never been
touched, then there should be a screw under one of the labels.

Cheers!

James

Hi Shiuming,

>>Anyone else had this problem with DE and large partitions/clusters?
>
>I regularly use Diamond Edge 2.04 on my Falcon's IDE 1 with ten 960 Mbyte
>partitions, no problems at all.
You will run into problems problems with Diamond Edge when using long file names format or FAT32 partitioning now offered by HD Driver 7.8
In fact, DE severely limits the use of partition types that one can use on Atari, it is so to speak *outdated* and needs a serious fix/update.

AFAIK Diskus 3.7 from Uwe Seimet (commercial) and Optimise 2.9 (freeware) are the only two applications that are capable of maintaining the harddisk *safely*. These two applications can handle *all* formats. Checkdisk 3.0 from Atari is also safe to use but can't handle FAT32 partition types.
The English version of Optimise 2.9 can be downloaded from Derryck Croker his website (see sig).

Cheers from Belgium
Dennis

Hi Leslie,

>Hey, I was wondering if anyone could help me solve the problem of
>having the printer types in NVDI 5.0x being completely invisible and not
>selectable in Atari Works (or any GDOS using software) under any
>Atari using platform (TOS, MagiC and MagiCPC). Many thanks.
Use the supplied INSTPRNT program to assign different printer types, the program can be found in the NVDI Utils folder. With the Printer CPX you can select one active printer. It is not possibe to print from two different printers from two different ports at the same time. Using the Printer Monitor (spooler) you can print documents with different printers, but this will only function with a multitasking capable OS.

In Works the printer type is not shown, only the GDOS ID number: 21, 22.. etc
Have a look at the ASSIGN.SYS file to see what number corresponds with wich printer type, i.e 21 PCL.SYS is for HP laser, 22 ESCP2.SYS would be for Epson Stylus. The same procedure is used by Speedo GDOS and GDOS.

RTFM might also help...

Cheers from Belgium
Dennis

1893. C++ problems

Newsgroup: comp.sys.atari.st
Date: 2000-02-05 00:00:00 UTC
From: Nenad <nenad@baxter.net>
Message-ID: <87htau$e3h$1@nnrp1.deja.com>
Source record: 66084

Hi,

I am learning to program in C++ under GCC 2.8.1c that I downloaded from
Mr Christian Felsch's homepage. I ran into some problems with this
simple example. For some reason, only when I want to use the class
destructor, but not without it, I get this:

```
d:/temp/cc7500001.o: Undefined symbol ___throw referenced from text
d:/temp/cc7500001.o: Undefined symbol ___throw referenced from text
d:/temp/cc7500001.o: Undefined symbol ___throw referenced from text
d:/temp/cc7500001.o: Undefined symbol ___throw referenced from text
exceptioni.o: Undefined symbol ___unwind_function referenced from text
```

Does anybody know what this might mean? Did I install GCC wrong?

Here is the example i used:

```
#include <iostream.h>

class Printer
{
protected:
int m_Code;
public:
~Printer();
Printer(int code = 0);
void print(const char* line);
};

int main(void)
{
Printer my_prn(754);
Printer his_prn(335);
my_prn.print("Welcome to Printer example.");
his_prn.print("Welcome from me too...");
return 1;
}

Printer::Printer(int code) :
m_Code(code)
{
}

Printer::~Printer()
{
m_Code = 0;
}
```

```
void Printer::print(const char* line)
{
cout << "Printer No. " << m_Code << " says: " << line << endl;
}
```

Thanks Derryck - I thought I knew the Atari quite well but I didn't know about that one! [Shift][Ctrl]C does work, even under Thing and MagiC in Everest, though [Shift] during block marking just marks a block from the point clicked on to the current cursor position.

The 1040 should be able to take the hard drive it you add an IDE
interface. The memory, on the other hand, depends on whether your 1040
is an ST or STE, and whether it's made up from SIMMS. If it is, and your
1040 is an STE, it should work. If not, it won't.

if you could, please send an email to djmaytag@djmaytag.NOSPAMMING.com (remove the obvious NOSPAMMING comment to reply)

Hi all, my 1040STe just died this week, and I'm in the market to get another one soon. Or I might want to upgrade to a Mega STe.

Just curious as to what the price ranges one might expect to see for either of these machines these day in the US.

I paid $150 for mine with a MIDI sequencer (Edit Track Gold), and a SM147 mono monitor.

Also, how can you tell how much RAM is in your machine? I took it apart and I see 4 30 pin simms in there, but don't know how big they are. anyone know? (might scavenge it for parts if my next machine doesn't have enough RAM)

thanx,
Mitch

1900. Atari TT030 for Sale - TX, USA

Newsgroup: comp.sys.atari.st
Date: 2000-02-05 00:00:00 UTC
From: Greg Goodwin <drclu@swbell.net>
Message-ID: <389C7DEF.1175@swbell.net>
Source record: 66091

Nice machine and got me around in the Atari world during 1999 and
on the Internet & newsgroups (and plays a mean game of "Battle of
Britian" and "Asterodia").

Specs are as follows:

4 Meg ST RAM
120 Meg hard drive
TT keyboard & Mega ST/2 keyboard
Mouse (of course)

$150.00 US Dollars (+ shipping)

For a picture of the actual computer being sold, check out:

http://www.geocities.com/clu-da-bard/Aut_0018.jpg

The VGA monitor is open to buy if needed. (+shipping) :)

For more details, write: drclu@swbell.net

I would have put it on E-bay,
but thought folks here might want a crack at it first. :)

Take care,

Doctor Clu
Dallas, TX - USA

PS: Yes, the Mega ST/2 box is also included. (grin)

PSS: If any are interested, another half of the fun of this machine
for me was how well the TT became a Macintosh Plus/Macintosh II
equivalent thanks to the Spectre 128. Like the VGA monitor, the
Spectre cartridge is also open to buy.

You're absolutely right. I'd never heard this before, but I just tested
it in QED and it works fine. This could be quite useful. Thanks Derryck.

Hi Galen!

I feared the latter was the case. In fact it 'almost' runs in ST Low -
the screen goes black and the top part with the graphical 'menu'
appears, but then it sticks (probably when it tries to perform the
colour-line-switching task).

But I have a graphics program that will convert normal Spectrum 512
*.SPC and *.SPU files for viewing on a Falcon, and wondered whether the
*.SPX could be expanded back to one of thees - or if there is a viewer
that handles them.

Regards, /Peter/

Ah, thanks - do you know *how* it is extended? And can one convert it
back to *.SPC or *.SPU? If necessary, I could go back to my STFM to do
it, if I knew how.

>>If the_phantom is reading this - are you the same guy using that name

On my hard drive - I don't know where it came from, sorry! If you want a
copy, let me know.

>Short of Spectrums Anti Aliasing, I don't know why you would use Spectrum
>512, although I like it:-).

I don't really want to use it - it's just that I have some pics in *.SPX
format that I'd like to convert for use on the Falcon. On The ST, or
course, Spectrum is one of the few programs that will give
near-photorealistic images.

>I would be surprised if you were to get Spectrum to work on a Falcon or TT.

Agreed, but it's a pity.

>I am not certain if it is the absolute last release or not. But Version

Hi Oliver - do you still have the ST? If not, you might be able to read the disks on a PC and use a text editor to replace ASCII 29, 30 and 31 with 32 (Space), also to delete all Esc+x 2-character combinations (they are print attributes and end of page markers etc). Also delete the ruler.

If your Atari had TOS 1.0 or 1.2, the PC won't be able to read the disk as it has two bytes different in the root sector. On the Atari there are programs available that write an MS-DOS type root sector to the disk. I don't know if similar ones exist on the PC, but if you have a disk monitor that allows sectors to be saved, read one from an MS-DOS disk and write it *to a backup* of the Atari (if you can make one). But your computer may not recognise the Atari disk to allow that :-(

If all else fails, contact someone with an Atari to do this for you. I'd be willing if necessary - where are you? There are even converters that turn First Word files to RTF, so that the text attributes are retained.

Hello.
Here's my next newbie situation. Well, it's not a real
situation. I'm trying to write programs using Sozobon C. As
anyone knows, it's generally good to have a shell program because
cc doesn't pause before it exits and you can't see any error
codes. So, here's the deal. I'm using something called gulam
that acts kind of like a csh in Unix. Does anybody use anything
different? Is there something better? I normally use bash in a
unix environment and I'm more familiar with that. But, I think
my preference would be something simple, kind of like a DOS shell
or something. Thanks.

The message <87k79n$r5t$3@news8.svr.pol.co.uk>
from "Dave Baxter" <News@thebaxterfamily.freeserve.co.uk> contains
these words:

> Hi,

> Is it possible to get a modem for my STE, I want it for email and general
> file transfer.

> Dave

Wel Dave, the serial port on your STe will support up to 19,200 baud,
so a modem that is a 14,400 type would be suitable - try your local
pc shop - you want an external 14,400 modem NOT A WIN MODEM!

You will also need a TCP/IP program such as STinG. Also you will ned
a mail program such as Newsie. This will give you access to email and
newsgroups - oh, you will need to be connected to and ISP as well.

You already on freeserve - I can get the logon scripts (I think) from
a friend who has recently gone PC totally and you could access your
freeserve account.

Email me privately on Director@blackflag.zetnet.co.uk if you want the scripts.

No. Why not simply get a MIDI interface for the A1200 and Bars & Pipes or
MusicX.

This is assuming ofcourse that you want to do MIDI, forget the 1040 entirely
if you want to do MOD stuff.

If you did want to go the Atari/MIDI route, I'm sure you could pick up a
harddrive and extra RAM for a reasonable price from somewhere.

Regards,

Clockmeister.

Hi Charles,
Not on my stock Falcon if you load a local text file! I can change
colors of text, links, underline, etc. but no show on text files. There is
a good answer in this thread though (I have to go back and re-read). The
same file saved by Newsie (which contains a URL showing in color while being
read in the Newsie program) does'nt show it in color when re-loading it
into CAB! (for me).

Hello,

I'm interrested in buying another TT and an STE. Preference is
given to machines with a Swedish TOS.

E-mail the specs of your package (TOS version/language, amount of
ram, hard-disk capacity, etc.) and your price to the address
found on the web site below (the one above is an anti-spam).

Thanks!

Atari was split into Atari Games (the arcade machine division) and Atari
Corp (computers and home entertainment) during the Time-Warner era. Atari
Games was then bought up by Bally-Midway and is still a very successful
company nowadays. Atari Corp had the fate that has already been described.

The 2 companies are totally unrelated. BTW Hasbro's Atari is no longer a
company per se, just a brand.

1927. Summer Games on ST?

Newsgroup: comp.sys.atari.st
Date: 2000-02-06 00:00:00 UTC
From: James Grubic <jgrubic@bozeman.k12.mt.us>
Message-ID: <389D2A71.28F16218@bozeman.k12.mt.us>

Hello:

I recently played Winter Games on an Atari 520 ST and the port was
really well done.

I was wondering if Epyx ever released Summer Games for Atari ST?

Thanks...please respond directly to mailto:jgrubic@bozeman.k12.mt.us

1928. Re: Atari - will Amiga Memory and Hard drive work in it ?

Newsgroup: comp.sys.atari.st

Seems to me that an Amiga 1200 with a MIDI interface would be infinitely
more valuable.

I don't even think that the Atari does stereo.

>started)

You will need.

1) HS MODEM to handle the high speed serial functions of the ST.

2) STING, this is the TCP-IP stack that you need to connect with an ISP.
Included is the dialer.

3) CAB 1.5 provides Web Browsing. CAB 2.7 Demo handles frames but doesn't
save Bookmarks. So you need 1.5 to save the bookmarks then transfer the
Bookmarks over to 2.7:-).

4) An OVERLAY for CAB. CAB was designed as an OFFLINE webbrowser. The CAB
OVERLAY allows for CAB to use STing and connect to the Web.

5) Flinneys Site has access to many of these programs.

The Commercial version of CAB require Magic.
If you don't have Magic, you can use STING, and a STING CAB overlay with
TOS and the commercial version of 2.7 and get the save features.

With 4 meg you will be able to do plenty. You should/will need a harddrive
which shouldn't be hard to find.

If you have TOS 1.0 or 1.2 the 40 folder bug will become a problem
webbrowsing. Some programs work only in partial functions.

If you have any more questions fire away.

Brian.
